be allaged by narcotics. After the attack, astringent tonics, ne iroll and quanine, may be givea; and the return of the bleediag is to be guarded against by avoiding the excitiog caosen, and attending to the rules of
henlth.
Haem'o
Hammorrhage, Hem'orrhage, $n$. [Gr. haimon rhagia, from tetrma, blood, and rheynusthai, to flow.]
(Med.) A bleeding or flow of blood from sorae of the verrhage is externil vienoat conish cause of hemorrhage is extermal violence, by which the blood-vessels of a part are divided. When as artery of some size is projected with a force propertioned to the size of the vessel, and with a motion correspondiog with the pulsations of the heart. If a vein, on the other hand, be injured, the blood is of a tlark crimson color, sad the flow is continsous and equable, with much less force than from an artery. Where merely a number of capillaries are injured, the blood fows in a maore or less japid oozing from the wound, but without being projected to any distance from the body. Whea a large most instant, the bleeding is so excessive as to cmbe alally, sfter a time, protuced by less of lood end the heart ceasing its action the lofol conguluted, and, the wound, and thas stops it up. Frequelily the recoruing action of the heart forces away the obstruction and the blood flows afresh; and in this way, if not uttended to, the patiedt musy perinh from exbaustius. With srteries of sroaller size, the flow of blood is at first rapid, but after a few minutes, with exposure to the air, the orifice contracts, the blood coagolates, and the bleedidg ceases, without much danger of retarning. Ilzemorrhage frote Whows with pies is much less dangerons, as the blood scls tund more to come together. Hence bes of the ves a vein is seldom immediately fatal. Whet beodg from out from iuternal parts, through aey of the natpral apertares of the body, the person is coomonly suid to have "burst a blood-vessel." This, bowever, is very rarely the case. If there be any rupture, it is Hsually ouly one of the minute capillaries; but even of this there is often no palpable evideoce. Blood may exule abmulatly from a surface which presents, to the oaked eys at least, no appreciable iojury or change. There are even well-authenticated instanees on record of cutabeous hamerriage, where s dew of blood has nppeared apos some portinn of the skig, and been wiped awny, change of the affected surface, weyond any discernithle variation of its color. There are slso what are termed "babitaal hemorrhages," as from the wotrils "s which take place periodically with certain indilvidaals and belong to the original constitutiou of the body, and ean scarcely te regarded as disease, Again, there are certain forms of hemorrhage not halitual, which may be denominated idiopathic, imanauch as they are nut to arise witheot any perceptible connection with antece dent local disease, In other respects they differ cossiderably, asd are distinguished as active und passive, the former heiog preceded ly active congeation, and therefore akia to inflammation; the luttor offen veany kiad. Passive hapmarrhage derives its bapse from being ascribed to some change in the condition of the blood-vessels themselves, by which their textures be come relaxed and debilitated; int enore probably it arises from some alteration in the condition and consisteace of the bluod itself, which becomes attenuated. Active hremorrhage occurs principally in persons who are young and robust, whe live well and lead indelent lives,-and is, for the most part, to be rugarded as an eflort of nature to cure itself. It is followed by morbid eonsequences only when the quantity has liend exceepive, or when it inticts some mechanical injury upua tho inuently inguroper to eupluy uny direct nuent of fre ping the flow of blood ; but much will depend upon the ping the flow of hlood; but much will dejend upos the circumastances of each particalar case. As they are
akin to inflammation, the treatnent of inflammation may often be requisite. In all mevere cases, the autiphlugintic regimen should be strictly enjoined. The jutient must be kijt in a state of alishlute quict ; all notion of the lualy and ewotion of the mind, all kind
of stimnlating food and drink. should be carcfully of stimmating tood and drimk. khould be carefully
arviled; and the patient farrombed, as nath ns pose aviniled; and the patient fncrounded, as nuch ns pos-
sible, ly conl, freshair. Sometimer, ar in inflamanation, it is becomsary to have recourse to remesection, in oriler Morcury is an important remedy tir inward blealimge Coll is ulso a valuable remedial agont, plared either in
 prossitile to it. Acetate of leal, athl the varions vear nata. ble componnds of gallic ncid, are important astringent remeslisw its snch cases. When a large artory is wounded, it is ganerally necessary to paes a ligature around th, alnove and liclow the wound.
Isemorrhoids, or PileN. (hem'or-myrz, ) n. pl. [Or.
hamu, and rheo, 1 flow.] (Med.) A disume of the roc hamba, and rhen, 1 flow.] (Mred.) A disvase of the rec-
tum nud anus, accompanied or fullewed liy tumere in thone parts, or lyy a flow of blowd from them when the patient is at stowl, recurring after intorvals, and nome-
times periodically. It is usial to apply the term either times pertodically. It is usual to apply the term either
to a ample theediug from the voiso of thu luwer part of the rectam, recuring more or lewn frequently, part of acompanied with any distiaguishablo tumora, sither nithin or on the entalile of the nnus; or elan fo owellIngs furmed liy a varlcose dietention and worddil thickesing of those vewarla, either with or without occanmand

 D. of poor pareots at doctor in physic at ll-idellere in 1781. The same year he was appointed district pisysician at Gomehn, near Magdethurg, ind cont mea mit atudice in chemistry and mermoved to Dresden, nod of an entruards ataned the practice of phyeit in the suon and confined himself to his private researelas in gust, andy and literature. There atndies lopan to a quire a fixel direction in 1790, nall in 175 he com quire a fixeri dirpetion in resnlts in the jonronal of his friend, Hufcland, ia an article entitled Fisay on " New Principle, dr. In 1805 he published his Mrarcive of Erperience, and in 1810 his Orgonom of Nationad
Acducine, in which the new doetrive was rinincel to a
system, and methodicanly illnstrated. In a second edition, published 1819 , the title of his work was abbreviated, and became the Organon of Medicine. A third edition appeared in 1824 , and was translated into English nine years afterwards. It was (ranslated by Dr. Dudgeon) in 18\%9, and a fifth in 1833 (translated by Dr. Dudgeon), each of which embodied fresh reeulta, and enlarged the feld which this indefatigable experimentalist had undertuken to cultivate. of the anthor mentioned below were making their way
silently over Europe, $H$. himself was experiencing the uenal fate of the world's benefactore. In 1813 he had removed from Drosden to Leipsic, where he was perse cuted by the apothecaries as an empiric, and this had rison to euch a height in 1820 , that he was glad to avail bimeelf of the protection offered to him by the Duke of Anhalt-Cothen. In the same year be published hie Pure Medicine, in 6 volumes sro, and in 1829 his Theory of Chronic Mclaulies. and the Proper in 4 volumes, which ware enlarged to 6 volume in a eecond elition, 1810. In the meantime, his do mestic circumstances wero changed for the better by his marriage in 1835 with a French hdy, in whose company he removed from Cothen to Paris, at the age of 80 . H. remained in Paris till his death in 18\&3, aud had the satisfaction to hear that lomgeupatiyy was about to have a chair at the miversity of Vienna, and that hoepitals were propused in London, in Berlin, and intiany cim
of Auetria. The principles of his therapentic reformfor such it undoubtedly is - may be deeeribed as a recog. nition of derangements in the vital or spiritual force of the body, whether occasioned or not by material infl ences, as the primary causes of digeaso; the cure of
which is by the reaction of the vital force against the which is The application of this theory consists-1st remedy. The application of this theory consists -1 ist remediss corresponding to every species of ab,normal ac tion sud such remedies are found both in theory and practica to be the assianulates of the discase - or medicines by which precisely the same symptome would be prodnced. The reasun of the cure is chifficuit to express in few words, and illustrations far below the refined philosophly on which it depeads have been used hy pro-
fessional writers. According to the turms of the theory, fessional writers. According to medicities may be considered as diffusing themselves the medicine may ba considered as diffusing themselves
with a geutle bat irresistible force, like that of light, with a gentle bartal corrnption and the vital spirit in combat with it, and being more subtile than the disease, and yet, liko it, they engage the vital force in a quicker and more decisive conflict, and thon gradually yielding befors it, as their own virthe expires, the vital foree is lilerated, and, as a matter of course, resumes its normal action. This explanation, however, is only half the truth, for it ie well known that fuids in effervescence ara reduced to rest by the eatiafaction of what many be called the hunger of one body for another, and something of this hind may take place when tho assimnlate
is introduced to the diseiss. Be the explanation what it may, the discovery of the facts by years of patient sud often painful experionce, is the title of $H$. to the gratitude of society. Ile proved the virtue of an immense number of assionulates by testing trieuds, and displayed equal art in the method of their refinement. Ilis Organon of Medicine not only raises the art of healiug to the rank of an exact science, but renders it an elegant and philosophical sturiy; while the facilities of its practical application have beeu curried to snch perfection, edpecially by his followers in this country, that many mothers of families have become expert homeopathic physicians, and rarely require the aid of a practitioner. 200 treatises on medical and II. is tho author of soms 200 treatises on medical a

(Hist, and Arch.) The principal apartment in the castles and mansions of the Middle Agen, which was
used on all cecasions of ceremooy, and in which the neals were serven. Some of the palnces of the early Frank aud Saxon kiugs appear to have consieted of little elre than the liall. The earliest existing epecimens are of the 12 th cent; ; and though none of them
retain their roofs ur fittipss, it is apparent that several retain their ruofs ur fittings, it is apparent that several
of thetn were divided into three alleys, by rows of pillars of then were divided into three alleys, by rows of pillar
and arches. In these balls the king, together with hie and arches. In these batis the king, together with his
courtiers and alt nia cetainers, dwelt, sittiog at the same table and aronud the saioe hearth. There was generally
another smaller chamber attuched, in which the king and his charti+rs slept, whine the retuiners slept in the
hall. The Normans boilt halls vory similar to those of lasll. The Normane built halls very similar to those of
the Sinxons; and, with tew moditicatious, similar buidd-
 inge wore erected untit the athe mamers more retived,
then being more manerons, and mamer then beme pecessary tu have mare numerobs upartmeats The hall, bowewer, held its place us the chiel rootn of the house, in which the king ur lord of the manor administered juatice, gave nudiences, or received and entertained his guests. Frous the lith cent. downwarils, numerons examplvs of large and stately halls still rebain in Eingland, France, and Germany. Ameng the linest of these relics may he medtiotied thast at Elthun
Palace, Kent, King, represented in Fig. 123i. The luill

Pig. 1231.-the great mall at eltham palice, (Eug.)
originally was essentially a part of feudal architecture. The principal entratice wat at one end, where, in those which retain traces of the originul fittings, a space is parted off by a screen extending across the whole width, and supporting a gallery above. In the acreen were
doors leading into the hody of the hall. At the upper doors leading into the hody of the hall. At the upper end, a portion of the floor, called the dais, w:as ratised one or two steps above the rest, on which was phared the principsi table, at which the host sad smperior wall, cummanding a view down the room. The fire, or open hearth, was often in the middle of the floor, sod the smoke escaped through a lonvre on the top of the roof; sometimes, however, fire-places were formed in the side-walls. Io halls of the Perpendicnlar date, ther was a large bay-window at one end, and sometimes at both ends, of the dais, where the "cupboard," or buffect was placed. Many of these arrangements are otill re-
tained in the university halls. The walls were fretained in the university halls. The wals were fre-
quently lined, for some part of their height, with wainscoting, abil an ornamental canopy was fixed ore the frincipal seat. The wall
Hall, Jimes, an American judge and author, b. in Pliladelphia, 1793. Ile served during the war of 1812-14, and in 181 s returned to the etody of the law at Pittsburg. Penna. In 1812 he was el-cted judge of the circuit conrt of Illinois, and also State treasorer. In 1833 he took up his residence in Cincionati, where he devoted himself to the mixed pursuits of banking and literature. His chite works are, Legends of the West (Phila., $1832 ; 2 \mathrm{~d}$ ed. 1833 ); the Harpe's Head, a Lergend of Kentucky ( 1833 ); Stietches of the West (2 vols., Plita., 1835); Tales of the Burder (1835); and Notes on the
Wrstern States (Phila., 1838 ). In conjunction with T Wistern States (Phila., $H$. bronght out un elaborate and II. Ham'ilton, Alexandes, a distiogaished
ofticer and legimlator in the war of Independence, was bora in 1757 , at Nevis, W. Indies. While a student of Columbiat College, at the age of 17 , he published several essays concerning the rights of the colonies, which were marked by vigor and matority of style, as well as by
souadness of argumeat. Befire he was 19 be entered soundness of argumeat. Befire he was 19 he eutered
the American army, with the raak of captain of urtil the American army, with the raak of captain of artil
lery; and by the time be was 20 , the conamander-inchief had made him his aid-de-camp, with the rank of chertenad made him his aid-de-camp, with the rank of separable companios of Wushington contiaued the inead was always consulted by higton dariog the war tant ocoasions. After the war, Culobel Ifamilton, then ebout 24 , comasenced the study of the law, and was soon admitted to the bar. In 1782 he was chosen a member of Congress from the State of New York, wher he quickly acquired the greatest influeace and distinction. He contributed greatly to the favorable reception of the Constitntion, by the essays ise wrote, io conjunc tion with Madisoo and Jity, is the - Federalist." On the organization of the Federal government in I789, he wis appointed Secretary of the Treasury; and doring his
continuance in that office, about five yenrs, public credit from the lowest stato of depression to height altogether unprecedented in the history of the country. In 1798, when a invasion was appreheoded from the French, and a provisional army had been called into the field, his public services were again required; and on the death of Washiogton, in 1799, he sncceeded to the chief commaud. When the army was disbanded, Hamilton ugaio returned to the bar, and continued to practise, with increased reputation and success, uotil 1804. A quarrel having taken place between
him and Colonel Burr, the latter challenged him, und they met at Iloboken on the Ilth of Jaly. At the first they met at Iloboken on the Ilth of Jaly. At the first fire Hanilton fell, mortally wounded, on the same aput where, in short time previously, his eldest son hard beed of the warmest admiration, $\boldsymbol{H}$., who excelled equally as a writer aud a spoaker, enjoyed among his contemporiuries Goth friends and fues, a repatation for sterliog ability
IIam'ilton. Anthony, Count de, a courtier and ghin of letters in the lith ceat. He was descended from an ancient Scotch family, hut B. is 1646, in Ireland; from whence he was taken to Frince, whes a child, by his
parents, who were attached to Cbarles II. When James II. was obliged to contend for his crown in Ireland, he gave $\boldsymbol{H}$. a regiment of infantry, snd made him canse, be accompuried Janiss the ruin of the royad passed the rest of his life. His wit and talenty sere he him admission int, the first circles; and the secured Germain, in 1720, - H. is chiefly known as ao anthor by his Memoirs of Count de Grummont, n lively and spirited production, exhibiting a free and faithful delineation of the voluptuous court of Charles II. Handed, Genoes Frideates, an illustrious German originally intendod by his hather for the law; that enrly of sweet eounds," progress was so ripid, that at fen years of toe he com preed a set of sonnets. In lives lie weut to Itumburg. where he played a violin in the orchestra of the operat He was soon its directur, tud composed bis first oprera, Almira, which was rapidly followed by Nern, Floriwda and Duphne. His violent tomper invelvel him inta ynar rel with a brother-tomporer, whele resulted in a duel the sword of his ndversary was stupped iny abutton or conposed hertrion, Jo99. Itis Agripnina, colupowed it Composed herirgh, 109 . Mis Agriphra, composed it his 11 Trimnfn elel Tempm. At Naples he composed Acis and Gulatou, and in 1710 returned to Germany, where he was applointed chapet-master to the Klector of lianover, afterwards George 1. He afterwards went to Ets land, wbere be was patronized by Queen Anue and the nohility. He cobuposed Finatelo, Pustor Kidn, Theseus,
and in 1115, Amudis da Guuld, in which Nicolini nud and in 1715, Amudis dat Goule, in which Nicolini und Valeotini first snug in England. The opera was un ex otic in England, and a platit of slow growtb. A Royal Academy of Slusic whs formed, atd atter sume competsbearing temper conld not cope with musital jcalousies Allopposition house was started, ant both soon failed with a losa to $H$. of $\$ 50,000$. He now comnenced the composition of his oratorios. Esther was prodncerl in 1733 ; it was fallowed by Deboruh, Alexander's Phast, and Jsrael in Eyypt; aud in 1740 appeared $L$ - Allegroe Prnserosn, and Nad. These ware prodnced in the Lancols'e Inn Fields Theatre, hut with wo profit. Evon the Nossiah, the most sulilime of his compositions, was at
first a failure. Tired ot this titabic struggle, ff. went first a failure. Tired ot this titabic struggle, $f f$. went
to Dublin, where he remained nine months, and received to Dublin, where he renained nine months, and recervenposed bis Srmsmn, and produced his Messiah for the uenefit of the koundling Hospital. It was repeate brought to that charity $8.11,500$. H. hecame hlind, but he still composel, and played on the organ, being leal to his seat, und forward to receive the plaudits of the andience. D. 1759 .

Hang'iast is anging mater.
in thas country and in Euglund is that pminhment used which the boly is wholly or partially suspended by the neck, the constricting force being the weight of the body itself, while iu strangulation it is due to some other cause. In both cases death cemmuoly results
from osphyxil. If, huwever, the cord be loose or from esplyxilh 1f, however, the cord be loose, or
applied to the upper part of the neck, a small quantity applied to the upper part of the neck, a suall quantity
of arr may still reath the luogs, aud in euch cases death will arise from :quphlexy, the cereltral circulation being ioterropted by tho pressure. In mainy cases death is produced by a mixed conditiou of asphyxia and apoplexy In the execation of criminals, 1 this otten been olserved that death docs not always ensue within the sume peried of time ; which is to be accounted for from the greater or leas degrue of constriction produced by the ligature In some rare cases, death has taken place with great rapidity, owing to a displacement of the dentiform process ot tho secund cervical vertebra; by which the spinal
marrow became suddenly compressed. This cause of marrow becime suddenly compressed. This cause of
deati, however, is extrenely rare, aod is only likely to death, however, is extrenely rare, aod is only likely to
ocenr in very corpulent suljects, when a long fall it ocenr in very corpulent suljects, when a long fall i
given to the rope, and whea much violence is at the situe time euployed by the execationer. Sometimes violent convulsions are observed of the limisand trunk but there is no reasen to believe that the indryidual suffers pain theo nay more than in au epileptic fit. I h.ss often been funud impossible to resture animation atter the body has been ouspended only a very few in the tirst instance recover, and subsequently die, in spite of the best nedical treatment, from the depressiug effects prodnced on the muscolar und nervous system In attempting to restore apimation in such cases, artificind respuration, cold affusion when the skin is warm, With the vapor of amponia, and other atimuli, are tricity, or electro-magpetism, in the course of the elec is also sumetimes attended with benubit If thero shoul tre muca ceretral congestion on recovery, venesection may to cautiously resorted to. From experiments, a well as from the evidence of persuns who have been resuscitated, wo learu that asplyxia comes on in the most iusidious manner in death from hanging; and that the slightest constriction of the trachea will speedily produce insususibility. Such persons have been conscyoss, then aringiug in the ears, a flash of light before the cyes, then darkuess and stnpor. In medical jurisprumine whether the individual was susucaded to deter after death, and which nust often be determined ly for circumstances of each case, as there is no distinctive siga by which the bangine of a living hooly can bedeter mined, or which may not be simulated in the dead subject. It is also often important to determine whether the individnal hanged hituself or was luaged by othera and there, too, an opiuion can only be arrived at from a cousideration of the circumstancts. In such casce, how ever, the presumption is in favor of suicide, as hadgimg is a difficult mode of perpetrating murder, ublese the
strength of the parties be prcatly diavroportionate, er strenyth of the parties be greatly diaproportionate, or
the assailants numerous. Ilangiug is also sometimes the adsailants nomerous. Hanging is also sometime

 mong curtnin commercial cities of Nurth Ciernanyy, in the 13 h century, and twok its name from the wad man word humsa, signifying an assuciatinh or com of the eracy for muthai aid. As the colth and importance, thry curne to be harassed by the attacks of pirates wor cane to ders, and varimas tolls were imposed which mitiofler berionsly with trade. These circamstances at leligt give rise, in 1233, to an agreen' I2t a confederaw wat formed between H..mluntry and Libeck, in which they mutoally agreed to protect each other againat an
viofence. This confederacy was joined by Brunswick in
12 in. In a short time the number of the members had So mach increaseed, that in 1260 a diet was held at Lübeck, the chief city of the league. Regular meetings
of the confederacy now took place there every three of the confederacy now took place there every three years, abuat Whitsuutidc, and the general archives
tbe lengue wers kept there. The confederacy was at its highest degree of power and splendor during the fewer than 85 cities. These were distributed into four classes or circles. Lïbeck was at the head of the first circle, and had under it Hamburg. Bremen, Rostock, Wusmar, de. Culogne was at the head of the second cir-
cle, with 29 towns ander it. Branswick was at the head cle, with 29 towns ander it. Branswick was at the head
of the third circle, which comprised 13. Dintzic was at the luad of the fourth circle, having under it 8 towns in its vicinity, besides suveral others that were more rein the depoties of the different towas assembled in conin the deputies of the different towas assembled in con-
gress. In it they discussed all their measures; it degress. In it they discussed all their measores; it de-
cided upon the eum that each city should cuntribnte to the comuson fond, and upon the questione that arose the conumon fund, and upon the questions chatt srose between the contederacy aud other powers, as wently arose between the different members of the coafederacy. Any one might be chosen a deputy, and, besides merchants, the congress cumprised elergymen, law yers, urtists, \&ce. When the deliberations
were concluded, the decrees were formally cominumiwore concluded, the decrees were formally cominumi-
cated to the magistrates of the cities it the head of each cated to the masistrates of the cities at the head of each
circle, by whom they were subsequantly communicated circle, by whom they were sobsequantly cobanumicares
to were adopted for carrying them ioto effect. One of the Lurgomasters of Lubeck presidet at the zateting of city
gress, and during the recess the magistrate of tha city gress, and during the recess the magistratus of the city
bid the sole, or at least the priucipal, direction of the affairs of the leagne. Sometimes congresses wore held at other places inegides Lilbeck, as llamburg, Cologne, de, and extramplinary congresses were also occiasionally, they became more aubitious; they endeavored to ac-
quire the nonopoly of the trade of the North, and to quire the nonopoly of the trade of the North, and to olastruct aud binder the navigation of foreiga vessele in
the Baltic They succeeded in obtaining, partly in rethe Baltic They encceeded in obtsining, partly in re-
turn for loans of money, and partly by force, Various privilegea and immonities frum the northern soversigas, which secured to them almoat the whole foreign commerce of Scandinavia, Denmark. Prussia, Poland. Russia, \&c. They now declared their object to be to protect sia, \&c. They now declared their object to be to protect thenselvee and their commerce froin pilage, to guard and es far as practicable to monepolize it; to manage the alministration of justice within the limits of the confederacy; to prevelut injustice by public asserublies,
diets, und courts of arbitration; and to maintain the diets, and courts of arbitration; and to maintain the
rights and inmunitice received from princes, and, if rights and immunitics received from princes, and, if
possible, to increase and extend them. The leagne exercisel a judicial power, and inflicted the greater anil
lesser ban; buy place which iucurred these pusishments lesser ban; buy place which iucurred these pusishmenta
being said to be verhansed. At length there was no mart in Europe that was not kradually Jrawn within mart in Europe that was not kraduaily drawn within
the circle of jts influence; and by the greatoess of its the circle of its infuence; and by the greatoess of its weats, and crowas, lands, and beas. It conquered bric and
IIfakon, kinzs of Norw,ty, and Waldenuar Ilf of Denmark. It deposed a king of Sweden, and gave his crown to A1. bert, dake of Mecklenburg. In 1428 it equippel a fleet of 248 shipy, with 12,000 soldiers, agatust Eric of Den-
mark. In the conutry under its inamediate influence, it mark. In the conntry under its inmediate influence, it constructed canals, and intruduced a ubiform system of weightsand ineasures, In order to lacilitate and extend varions factories in foreign conntries, at London in 1250 , ut Bruges in 1252, "t Novgorod in 1272, and at Berges in 1278 . In Loddon their factory. was of con silerable size and importance. They enjoyed various privileges und immmmties; thoy were permitted to govern themselves by their own laws and regulations; hul the custody of one of the gates of the city (Bishopssgate) committed to their carr, itind the duties ou vatious kinds of imported commoditiee were considerably re-
duced in their favor In the Netherlands, and in Norduced in their favor In the Netherlands, and in Norway and Russia, they enjuyed the like important privilages The fireign factories wrore abljected to an almose manastic strictuess of disciplize, whe cestibay required of the I5in century, the power of the learus themin to of the listh century, the power of the league begon to ducline, not owing to may misconduct on the purt at ith it band done so anch to pronote. Thecivilization, which 1.ul heenat first chiefiy confined to these cities, gradually wiremi from theta, as from so many contres, over the contiguens country. The peoples began to be sensilite of tho wilvantugua to be derived from commerce and n ivigation, and their princes also naw it to be for their advantige to encourags such enterpriaes; while nt the sume timo the rands, or smat, wore no inngor insecura. In f.reut citles which cornporad the leagne were becomin reity cuare and more opprosed to each other and tha discinvery of Anarrien led to is tutal revolution in the discivery of Aisuricis led to a tutal revalution in the
tate of tride. Tho last dot of the confeduration wia hinte of tride. Tho last drot of the confeduration win Il unhorg, Ldbeck, anal Bremen subsulumaty formed tu sumbehton among themselven, nad ramained freo ropulifich till 1810 , whin they wers hacorpurated into the French empira. In IM13, they again hecame fress, und, in conjunction with Yrankfort-on-the- Vain, wore recognized an the Pree Inuaratic ivtics. In 1808, Frunkfort-on the Man fell under the dominion of Piussin, and in 18 Fl along with Hrement. Iumlartg, athl Lubeck.

brillimit and pupalar ed al Kasim Bex All, the meat brillinit and pupular of Arabiao pouts, B, at B.ssorah, suout $105+$, A. o. Ditd there aloot 1122 . Littio is kurwa
of his lite, save that be was the son of a of his life, save that be was the son of a silk-merchaat
(whence his bage Harivi - harir, silk). The noot famons of all his writimgs is entitled Mukamela (Sittibgs). This may best be described as a nevel, or a collection of rbymed tales, loosely strang together, the centre of which is alwuys a certain Aln Seid frem Serpj, who, witty, clever, amiable, of pleasiog numbers, well read in sacred and profanc lore, but couning. unscrupelous, a thorongh rogne in fact, terns up noder all possi-
ble disguises, and in all possible places - sernonizise ble disguises, and in all possible places - seraonizing,
pretizing, teltiog adveatures and tales of all kindsphetizing, teltiog adveatures and tales of all kinds-
always momsing, and alwhys getting money ont of his audicace. The brilliancy of imagination and wit displayed in these strange sdventures, their striking changes, and dramatic situations, have hardly ever heen eqnulled: but more wonderfal still is the poet's power of language. The whole furce of the proverbial fulnesg of expression, spirit, elegance, and grandenr of the
Arabic idiom, II. has broaght to bear en his subject. His work - of which one of the greatest Arathan anthorities has said thit has indeed beconte the armory as well ns the qume of all Arabic writers since his day. Poets and historiane, grammarians and lexicugraphers, look upon the Maka-
mefis as the highest suorec of aut mehs as the highest suaree of hut hority, and next only to book has heen translated, either entirelycerned. Thi into ncarly every Easterti and Furopican toment and lias been the prutet ine of innumeralle imitations, the mose successfol of which is the one in Helirew, Tachicmusi, by Juhuda Al-Clurizi. 'Jhe first crmplete edition of the text uppeared in Calcutta. 1869-1814. in 3 vols, ; another by Cansmia de Percishl, in Paris, 1818: one minch more valunble, chiefty of necount of its commentary, liy silvestre de Sucy, apprared in l'aris, 1821-18:2, (reedited

religion and universal toleration. They admit members of both sex ces, but they do not marry. They keep wateh by turn at night, and observestrict morality. They cultivite the learned langnages, lileral professiona, and nunsic. Otfences are ponished by reprimands, temporary exclasion from the church sud social intercourse, und
Watranonaium, $n$. [Fromharmony.] (Mus.) An instrument wheh hare some affinity to the organ, but,
mulike that instruncent, is made upon a principle techaimulike that instruncent, is made upona principle techit
cally ternued the fire vitrating reed, which io said to have been known trom an emls period in China, but was inveroted by Grenie ia Is10, and hrst described by Biut in 1817. Tho tree reed consists of a brass plate containing an oblong she, having a thin elastic tongue fixed to one slit, as to completely cluee it, loot so that it will. upon the pressure of the wind un the free end, pass either inwarde or ontwards, withont tunching the end or sules. It has several advantages over the benting-reed of the organ. In the first place, its tone is of a more agrecali, quadity; secondly, it tequires no pipe, which is an indis pensable addition to the organ; thirdly, it is mueh lees liable to get out of order; and, fourthly, it gives an edtirely new property, -viz, the puwer of expression.
Debann, of Paris, was the first to cunstrnct a keyed instrument upon the trec-reed principle of a really use instrument upon the tree-reed principle of a realy use-
fol character. Several nttenats had been made, lut all had more or lese failed, matil Delain invented the harmonium. Thin iustrument is alout 3 feet high by 3 feet 9 inchee liroad, its depth varying according to the number of stops. The key-loatd is immiediately below the lid, and its compass extends five octaves, from C to C This now, however, in the hest instruments, is virtually converted into seven by the more periect arrangemen of the stops. The valves are beneath the key-board and on top of the wind-box, within which are the different rows of reeds, the pitch of which is regolated byes in size, which raries from half an inch to $31 / 2$ meches lue lireadtls of the vilirating portion and the shape of the hole covered loy the valve. The wind is supplied by neeana of bellows with two feeders, which the playe neans of bellowe with two feeders, which the player
moves alternatcly with his feet. For the deep base notes the springe are heavily loaded at the loose ead, to make them vibrate sluwly; while for the higher notes they ure made thinner at that end. Some harmoninme have only one ruw of recds, others four; some also have two rows of keys, lately, a "knee movement" has been iatroduced, by which a small degree of creeceodo may Harmonizastium, Tho met of

Intended to form a conaected whole; as, harmowy of
shape, the harmony of the universe, \&c, - Concord agreement ; accordance in facts; agreement in opiniuns, interests, mavaers, 6 c.; Eood correspondence; peace gether.
My beart ... by a secret Marmony still moves with thine." Milton.
-The agrement or cunsistency of differeat histories of the same eveats; a literary work which brioga together parailel excerpts respecting the stole events, fud showe their agreemeot;-used chietly with mpplication to the corresponileoce of the several writers of differeut parts of the Scriptures in their respective narratived, or statements of doctrine. The earliest hurmony of the Goapels was compused ly Hith the title Diatessoron Among other worke of thi kind may be mentioded, Osiander's IIarmomia Evangelica; Cartwright's Harmunia Evangelica Commentaria illastrata ( 1617 ); Le Clere's Hurmonie Evangulique (Aosterdans, fol.. 1699); MacKnight's Harmony of the (Aobsterdan, fol. 1698); Aosphls (17.6); Greswell's Haramony and Dissertation, (Oxford, 1830.)
(Painting.) The geperal accordance of the oljects in a picture with one another, and their subordination to the principal object; so that all mite to constitute a pleasing whole. It is effected by a due combination of lights abd shades, lyy the anion aod color, or by such (Mus.) The agruement uf two or mure buited sonnde. It may he either nataral or artificial; the former con sistiog of the harmonic triad, or combion cherd, and the Intter of a pixture of concords atal discurds, benring relation to the hamonic triad of the fundamental note With the Greeke, the word $H$. was in all probatility limited in its signification to that agreeable succession of sonnds which is now called air, or melody; while in modern music it is not employed to designate a mere succession of unaccompanied sounds, but a union of
mielodies, a succession of combined sounds, composed of mielodies, a succession of combin+d somndx, composed of
consonant intervals, nnd moving according to the stated laws of modulation. $M$. is the combination of sounds and the snceession of churds, ind may be said to combary little of harmum ind it his nut vet leem meroduced into the nusic of the Chinese and other Eastern bations. It is a cumparatively modern invention. The laws regntating the anceesaion of chorils ware at first rather arbitrary. (sie Chonn.) H. may be diviled into emple and compruad. Simple $H$. is that in which there is no concord to the findament.t above in octave. Com-
pound harsongy is that which to the simple harmony pound batroony is that which to the simple harmony of an octave rulds that of nother octave. From the maion of H. and melody musicimony, $I I$ cannot exist withont the melodions nrrangement of euth of its suversal parts. Itelenly is distion while harmony is produced by their combination. Every chord, whether cumsomat or disqonant, furms harmony. Alt harmony in masic is derived from what is calleal the aliquot tunce If a string be male to vibrate, the somm prodnced it first appears to be siugle; but upon a closer and more careful ohaervation, it will be found that the fundamental sound, more eapecially if it be a derp one, is ac compsinied by others in the must perfect harinumy. These accompanying suands are exactly those on which the cherds in mustic are formed, and on which the fonnof the of the wer a fibrechts berger, Dr. Marx, and Professor Dehu.

A creat monntain knot, the Cibas, ocenpios the centre of the comatry, fruin which twi, parallel chatins, running E, and W., extond through the ishaul in its entire longth. The foftimet sumbits of the Cibno are consideruhly more than 6,000 feet in height. In the
S.W. is an additional nonntuin-chain which strutehus S.W. is an additional monntain-chain, which strotchus W. tu the extremity of the long nud narrow penimalala
terminating in Cape Tiburon. Retween this paninsula and thu N.W. pomontury of the island is the spacions Buy of Couives, inclarling the island of the sume that pusite the S. W. pronantory. The shoreq of $H$. are in gueral buhi, "Yrept on the F., where low and swanpy by smatl tuinh.datmi islande and dangerons recefs, but they have, totwithotandis, many wx'ellent harlurs, erspecially alomg the N. und W. ements. Tha largeat plain, alomg the const for N 0 m . with a liremblt siarsion from 20 to 25 m . In ia mond to bre well sulapted to the cultury
chiefly of wide savandas, used for pasture lands. N. of it. eaclosed betwee two monstain ranges, is the more the foregoing. In the $W$. haif of the island are the large plains of Artiborite and the Cal-rle-Sac. The lastnatued, E. of Port-an-Prince, is frous 30 to 40 m . long, by about 9 broad, and was formerly one entire sugar-garden, thongh now almost wholly waste. $H_{\text {is }}$ is in aost parts profasely watered; it has numeroas rivers, the largest ismemberue on the X E., Sieve, und Artibonite, Which Thesu are nive the A., s., sod w. cousty respectively. re geaerally deep, aud with tulerably wide month three likks of considetable size exist at no great dis. tance trum the S. cuast of Heariqnillo; the largest is about 50 m . is circhit, and has salt-water, while the adjacent lake of A.aey is fresh. - Tim. The clionte of the lowlands is very unhealtisy to Eoroneans und N Americans. The excessive heats of the platins are, howperature of coarse decreases wath the elevation, and io the nountains the cold is often piorcing. The year as elsewhera between the tropics, is divided between the wet aud dry seasons. The change of the beasons is acompanied by tempestaous weather: but harricanes are not so trequent as in most of thec uther Antilles; nor re earthquakes common, though io 1710 a eonvalsion of that kioul destroyed the towa of Port-an-Prince. Gool.. Mira., dc. Little is known of the geology of this
island. A limestone somewlat analagous to that of Cula, containing vestiges of mation shells, is a prevalent formation. H. prodaces gold, silver. copper, tin, iron of good quality, and rock-silt. The principal coppermine yields an ore containing a eo., siderable almixtare of gold, and tha sands of many of the rivers eontain a good deal of gold-dust, saall quantities of which are collected. Tha workiag of gold-anines bas, however, entircly ceased. - Soil and Feget. The soil is alenost universally a deep vegetatbe monld, the fertility of which is scarcely equalled. The mountans, eved to their summits, are, according to Mackenzie, eapable of cultivation. The greater part of the island is covered
with dense forests of mahogany, logwood, iron-wood, with dense forests of mahogany, logwood, irou-wood,
codars, and other large and nscfal trees, or an impenetrable naderwood. The plantain, vaailia, potato, mamioc, Sc., are indigenons, as is the palmetto, or cabbage-tree. The latter is traly the prop of the Haytian, who eats the upper portion of it, bailds and cuvers his house with its various parts, and tashions his furniture out of its trunk. - Zoül. Of suverill kiads of quadrupeds foand by the first European settlers, the agouti is the only Inonase, and water-fowl, are very alsudant; the alligator, cayonan, iraana, turles, \&e, ahound in the larger rivers; several hinds of serpents are met with; and the crustacea and testacea afford a plet tiful smpply of food
to the inhabitants of the cossts. - Prod. and Agric.
 Resources. Ludter the Fredch regime, thas with the greatest care, with was more than amply requid by manaificent yields of produce. The growth of sugar engaged the laugest slare of attention the immense capability of the soil making the averag Horluce aboat 2,712 liss an acre, or nenrly two third more than the general yield of $t^{2}$ 'e land in cancs in ammint. The coffee-platition begun to he prolific sources of wealth to individuals, and of tevenc to the state, beshes these staples, lat qumutities of minze, rice, pulse, and almost every de-
scription of vegetables required for domestic cunsmancription of regetables required for demestic consump of extensive export; and liarge shipanents of mahogany of extensive export; and large shipments of mahogany dyewotse. dc., found their way to foremg countrics tiolished nure davary, was un el amous decrentin the umumit of arricultural produce, tunesaint lover ture ( $q, v$. ), however, liy an eoforced system of tulor partiatly remedied this state of things, an example for lowed liy lis successars, Dessslines and Christaphe. After the accession of Pétion, however, s.gricultural activity cased, the intherent idmeness of the negro wa allowe foll scope, and the prolnctive economy of the island attled into a seminarbarous and deplerable condition What is wantel to restoro to this fine island its former commercial and indnstrial prosperit ${ }^{\text {ch }}$, is cmphatically trong and cirinzed goveramg power. - Com. of the repoblic, and with a cash capital of $\$ 2,000,000$ -Govt. The executive of tbe Way tian governmeat in formed of a president aad 5 ministerial bureaux, viz,

1. Foreign Affairs, Justice, and Public Instroction; Finamee and Commerce; 3. Interior and Agriculture 4. General Police: aod, 5. War and harme, The legit sentatives. The president, who must be 35 years of age ist the time of his election, holds his office for life, commaodo the arny sod navy, makes war, peace, and trenhes, sabject to the sanction of the Senste, and sppoint 11 pnblic functionaries, \&c. The Senate consists of 36 memtiers, above 00 years of age, each chosen by the Clababer of Representatives from lists furnished by tha president. The Senate sits 9 years; and its previons nembers are redigible after a lapse of 3 years Ths chosen every chospertive commanes, its mempers anst respertive commanes. Its members anust be 25 year leagne fur travelling expenses. The session of th Chambers is lionited to 3 months annually. The lligh Court of Justice, composed of 15 juilges, has jorisdiction over alt charges preferred by the legislative bodies against their own members, or against the high state adetiouarics. There is no appeal from its decision ot the accused has the privilege of rejecting two third of his judges. There are 8 provincial, cisil, and crimipal courts. The legal eode is a modification of the French eolonial laws. St. Domingo is governed by a prestmi. under culture, War, and Finances and Conmerce it has, like Hayti, a Sconte snd Chasuler uf Pepresentatives, imilar constitation. - Religion. The Roman Catholic is the established religion but all other sects are taler ated both in Iayti and San Domingo. - Pinances. The financial affairs of both parts of this islaod are in sueh a hopeless state of chans that it is impossible, with any pproach to aconracy, to define their monetary position. As far as can beascertained, however, the national debt of Iayti, in May, 1882 , amounted to $\$ 12,50 \mathrm{i}, 884$. Ex pended by the givernment, 1882-8:. sb, (OW), nom),- (Thie St. Marc, Leogane, Jeremie, Aux Cayes, Jaemel, aod Mit. Marc, Leogane, Jereme, Aux Cayes, Jaemel, aod M In San Dutniago are St. Domingo the arescaports, Plata, nod Samana; the latier offered in 1870 to tha U
States - Hist. The island of $H$. was discovered by Columbus. Dec. 5,1445 , st which time it is said to hus been divided into 5 states. Having taken possession of in the name of Spain, Colnmbuns founded the town of La Isabella on the N. coast, aod established in it, under his brother Diego, the first colony fonaded ly Earopesus in the New Worlh. Tha city of St. Nomingo, which subsequently gave its aame to the entire island was founded in 1498. The alvorighal iuhabitants were soon eradicated; and their place was at first very inadequately saptlied by Indians forcibly carried off from ther Europcon countrica, and in the following eentury ther European countries, and in the following eentory Africa. The Spaniards retained possession of the whole island till 1665, when the Freoch ohtained a fontiny on its $W$. const, and laid the firundation of that eolony which afterwarils became so flourishing. In 1691 spain ceded to France half of the possessions of the latter were still frrther angmented. It was not, however, till 1 i 22 , that the Freneli part of the islaud liegan rapidly to advance to wealth and popalation. Froai 1776 to 1789 the colony had attained the acme of ita prosperity ; and its prodnee and commerce Were then equal or superior to thise of nal the other W India islands. Uahappily, however, this prosperity was whelmed the island may be said to he conuplete To attempt to give any intelligible stetch how slight soever, of the evente by which this iestruction wa brought about. and by which the negroes of $H$. eman cipated themselves from the dominion of the whites, inil fonnded an imiependentstate, would far exceed on limits. At the time of the french revolution, the negro eleanent in the French part of St. Domingo were
estiguted at nboat 500,000 . That a good deal of tissat estimated at nbout 500,000 . That a good deal of alissat isfartion existed among them is certain: lint there was no disposition to revolt, and the rash and injulicioun procerdings of the mother erwory, the debates and rooted animoxitics of the whites and mulattoes, were the prominent causes of the revolntion. The prowrripaccompusied and lirought abont, are, perhatos, hardly to the parallelecd. In 1800 7I. was proclaitued fodependent and its independence was consslidnted by the final ex pulsioni of the French in 1803, This was "ffieted liy the island into an empire, of which he beqatue emperor with the title of Janes 1. This desjontism and crnelty sana rendered him univerxally detested. He wav shain in an inarrection in 1906, and the mand was then divided niming several chefs, the pineipal of whem S.Fe lin lkll the former made himself be proclatand king, unthr the tithe of Itwory I. Like the other viscera, it is removed from the eye, so
thet little knowledge of its condition can be ohtained by inspection; and hence we mast have reconrse to
other meaos. The ear is the principal means of obtainother meaos. The ear is the principal means of obtain-
ing a knowledge of the state of the heart, and by acsculletion and percussion (9.v.) we nre entibled to deteet the existence of varions diseases. The lieart gives ont two sonnds, known as the first and second, which are distingoished from each other. The first sonutl is longen than the second, and the interval between the first and and first. They haver than that between the sccand bles lupp, dupp. Any manifest niteration in these sunds is indicative of the existence of diseatse. They bay be high or low, clear or dall, muftled, rough, inter mittent, de. Murmurs or repugitatht sunds may arise from diseazs of the valves. The power of dastinguishing and of the causes pruincin.ernill sumbs of the hatitt, tained by lengthened experieoce. Disuases of the heart are nshally dividod into two classes: 1 Anctiound ur nerrous; aod 2 . structural, or organic. Chief atmong the former are palpitations, synuspe, or taintinz, and anyina pectoris, ( 4, v.) They are chielly to be met with in persons of a naturally nervous temporiment, more enpeplaints, and may beinuticed by prat mostal excitement, in suth cases great attention should be pard to the general health, and by moans of tonics, sea-bathing, and gentle open-air exercise, the system is to be streugth. ned. Golent exertionamil strous bental excitement are particulariy to be atvinled. Among the principat orditus, cardilis, endocurdilis, atrophy, hypect arophy dilutuditis, carditis, endocardilis, atrophy, hypertrophy, dicutteof the pericardium, maty be inducel by expusnre to damp or culd, wr by other canses, which give rise to ioflammation in other parts. It is chauacterized by great tenderness over the region of the beart, innounting, when pressed, to sharp cutting pains, which provent one from lying opou this left side. If, as is ushally the case, the pleura is involven, there will be acute pain, or conghing, or drawing a deep bresth. Sometimes the attiuk is not so severe, and but a slight pain is fult, or only a seuse of heavioess and oppresstun. Quarally the action of the heart is increased, sonetimes 80 much so as to eonquantity of flud effused into the cavity of the prabire dimus, which is sumetimes externally visible by the bulsinir out orer that part. It is a frequent attendint of acnter rheumatism, (q. v.) It mode of treatment depends very much upm the particular circumotances of each case. Where the disense is rapid and violent, bleathing may be of great service ; in other cases tonics, and io shane cases stimnlints, are employed. Cerdites, or inflammation of the heart itself, sonctimes ocents, hat it is usually accompanied with inHannuation of the pericardium; the symptoms in both cases are the $8 \tan ^{\text {a }}$, and the treatment will consequently be similar in both. The like remarks ulso apply, in great measime, to endsetrditis, or mflamnation of the in-
terior liaine membrane of the heart, which is usually Hecombuainied by onte or buth of the above. In this case Hocampanised by onte or buth of the abov6. In this cis there is more or lezs of fever and anxiety, and an peca Atrophy, or is wastieg of the heart's substance, arise from a deficiency in the supply of nutritive matter. It is usually accompuied by general emaciation, and will be pretty sure to turnimate in death. When the heart is examined after death. its tissnes are found to have ondergone a change, and, instaud of a striped, to pre-
sent a homogencoms appearance. This is called fatly sent a homoreneous ippearance. This is called fulty
degeneration. The trotinent is to strengthen the sys. degeneration. The trotinent is to strengthen the sys.
tem liy tonics, wholesome and mutritions diet, open-air tem hy tonics, wholesome and nutritions diet, open-ai
exercise, sen-bathng, and the like. - Hippertrophy, on the ather hanal, is the result of ine excess of matrition, the nutritive process appearing to go an wore rapidl thent the absorbent. In lhas w.sy the lieart is often gready with. It is usually distinemashal into three kinds, sugic, when the walls of the heart, or its hivisions, ar thickened, withont any diminntion in the capacity of th thekenell and the or andiarishat when concentric, when the cavities are diminishest in propur tion to the thickening of the walls. The tirst of these the least comnon, and the second the thost frequent and any of thein in ty afflict a single cavity or tho whole heart. From the force with which the bleot is propellied io such eises being greatiy increasel, the tendeory is th piraduce haenorthiuges, aneurisin of the aurth, apoplexy \&c. The pulsatioos are frequitiy regular but strumg chest is bulged ont over the prat. Rust, whatidence and more or less inpletion, according to circhustances are the proper means to he employen! in such ucuse nud usually, with caro and persweratice, the symptome will bo much uleviated - Dilutation of the heart is when one or mure of tho cavities are charged in кige withont the

Visurls dexigned to retain the hent of their contents slmalil buse clesin polished surfares. white stoves, or budien iutemberl to impurt $H$., should be bothewhat rough, of mot highly polishect. Fadiant $H$. is thrown off in straght limes, and is reflectel. nusurhad, thanamitel, and rellacted, it ohedience to the kame haw that govern light. It is aso sumeptife of prarization. Gime it is reflected, may be proved by flacing a lut ball of iron in the focus of a concave reflectur, while Rome gump,witer is placed tant from the ball. The potuder will lue iknited, thelirs placel at any other poist mulh worer the lang placed at any other photht minh brarer the hail, it
wonld remain unaffocted. If we stand with our bick to a loright fire, and hold a mittor in such pusition that we may see its reflected light, the face reqeiven at the same time the semation of hent. By an arramanomt of mirrors, Archimedes, in bis famona defence of syracunc, whs enableal to bre the fleet of Narcellus by the concentrated and reflected hent of the smas rays. Radiant heat is alsorlned rendily by surfaced that are good radiature, and out imperfectly hy those surfacte that are good reflectors. Dath. romgh buifes ahsorl, rendily and become swonet heated than stooth and polished ones ontside is cuvered with sout, the un one that is lripht and elean. In the wiweriment atove dubcribed with the hut lall the mirrur is not bouted, theugh within of fow inches of the hut iran, 50 perfectly dous its polished surlise reflect the rays of hat. The air is a procer absorher of $H$. 'I he stan's rays pass through it withont sunsibly increnting its tr-purature; und it becomes Warmer prisipully hy consection from the heated surface of the carth. The sums heat passes themgh the air and transpareat ladius wihout lows. but beat from uther sumes is more or less atsorbed by horlies that
alluw light to pass readily throngh them. Bodins allowing a iree pasamge of $A$. throngh them are called diu thermunous, onfl thwae that ahborb the untist of the $\mathbf{I I}$. trabomit the rare called uthermunows. Rock-ailt hati ar all other bedies ulasorb a purtion of the heat-rays in the sathe mabner that colored glasues intercept or alisurb sume of the rays of light. The facte in this connection If wory remarkable; we can give kpace for but few. If we take, as a smarce of heat, a kettle filled with boiling water, at than plate of trantparent rock-salt will
 thicklums, will mot tratnamit any. Whit the execptum varsed with tha $\mathrm{g}_{\mathrm{a}}$ ality of the heat, and it differs on the s:ame berly with the intensity of the hatat. Tlus, plateFhasy which trankmits nome of the lowat from at coppe-
ball hated to $21: 2$, tranamits 6 pur cent, of that irom
the same luall at a temperature of $750^{\circ}$. The facts of Tadiation and absorption alfurd an explanation of the frozen dew, of land and sea breezus, ind of winds. (See bulies have acquired a ubilorm temperature. If a hot ball of iron lue placed in a roum, it parts with its heat until the oljects in the room and itself bave the same
temperature. If a lolock of ice at 220 be introduced temperature. If a block of ice at $\$ 2^{\circ}$ be introduced into a room haviog a teuperature lower than its own, it radiates H., and this warins or elevates the tempera-
ture of the room. - Latent $/ 1$ Whenever a selid is ture of the room. - Latent II Whenever a solid in
chaged intu a liquid, a certain amount of heat disapclasged into a liquid, a certain amount of heat disap, melt ice at $32^{\circ}$ requires 143 degrees of heat, a ad y et the Writer produced has a temperatnze of only tizo. The hatent $A$. of water is then said to be $3 \pm 5^{\circ}$, and this lar effect is produced wheo a solid or liqnid is changed to a sapor or gas. Tu change water at $212^{\circ}$ into stean of the same temperature, 0 ij it-greess of $I I$. are required. The latent heat of steam, then, is $960^{\circ}$, which becomse sensible, or reappears on ats condensation into water.
Cold is produced when solids are liquefied by slow chemical action, as in the case of a mixtere of ice and silt. This is the principle of Freezing M xtares, q. V.
Sprcific $H$. Bodies difer greatly in the amunt of $H$. Sprcific $H$. Bodies differ greally in the ammant of $H$.
required to ellect the sane changes of temperature is $H$, rompiced to raise its temperature ono de gree as cum pared with the quantity required to rilise the same weight of some other substace taken. as a standard one degree. For instance, if wo subjert a pound each of water, mercury. copper, und oil to the action of a unitorm source of heat, we shall find that to increase the temperature of each, ety 5 degrees, the times ro quired will be as follows : for the water, 31 ; mercury, 1 ; copper, $10 \cdot 6$; oil, 15 ; that is, tho water will alsorb 30
times as much heat is the mercury lefore indicating as times as much heat is the mercury, hefore indicating as
high a tempetature, the copp.r $10 \cdot 6$, and the oill 15 times high a tempetature, the copper $10 \cdot 6$, and the oil 25 times
as nuch. Having heated these substances to the same as moch. Having heated these substances to the shme the mercary, the copper $10-6$, and the oil 15 times it long. The water evidently contained 30 times as much beat us the uercury, or, which is the same thing, it spatefic $\boldsymbol{H}$. is 30 times greater than that of mereary. that if copper $10-6$ times, \&e. Water is mlopted as thic standard of comp srison, - Catarinetry is the art of determiaing thespecific $I$. of bwhes. Different methods
are resorted ta for this parpose. Byual weights of dit are resorted ta for this parposes. Eyual weights of ditthe time whinh they require to eont is noted, or, whed heated, they are phngred intu cold wather, and the grain of
$H$. on the part of the water tund its loss hy the body noted ; or, the quatity of ien is observed whinch they will lighefy
 mixing equal weishts of two lignids at thifferent tumper tures, and noting the resultion temperature of the mix ture. It is an iuterestian fact that the loas the athon weight of a Lody, the greater its specific $H_{\text {; }}$; and in most ceves the prodnct of the atomic weight and that spucitic $H$ is a constant quality. These experiment prove that different bolies hive different cipacities for heat; thas water, at a tumperature of love , contain much more $H$. than mercury, copper, or oil, at the same temperature. Its areat capacity for $1 /$. renders th peean a great regulator of hent upan the earth's surface In the cumbur it Alsorgs and holds great quantities of
$H$. whin is slowly given off in the winter, and tends to modify the cold of islands and coontries mdjacent to it of $H_{\text {, and }}$ not a fixed tomperature. Gar monsatimens mal impart to as no true ideab of real temparature. A travelle from the smmmit of the Anles, on descending half-way to the whan. will find the leat uppressive, while his
friend who hats com: Irom the plain bulow to muce him. regnires a fire to warm himself. If we place one hath In warm water and the other in icwowater, hat them
 will be cund and to the other Warm. Cold is pronhesel by evaporation from the conversion of sensibles $1 /$. inth latent henat. A volatile liqnil, as cthir, Iropperl on the okin. canses the sensitun of cold. The cryaphoras, on iront-rearer, instrates the promaction of colf by quick one enil, and contains a small quantity of wator, the rest of the space being lillol with the vapor of water only. When the water is turned intos the lulh, and the empty end planged inten a freezing mixtore, as ice unat evaponation from the anrfuse of the water in the bull that it is npeodily frozen. On athowimg a jut of ligal-hiol carbonic mid to issme finto thes air, anch min intelase degre of cold is pronluced liv the vapurization of a portion of thim molidificel sarlomue acill with eeluer, the By miximg

 Cunn tbis satica, the only opecies, yields the valuatho filire called hemp, which has been known for more than 2,500 years as a material for cordare, sacking, and cloth. In England the plant grows to the in light of about 6 ft . is feet high. The priocipal sunplios of the fibrount 1s feet high. The priocipal sunplies of the fibre are homp-seed, are oleagitons and demalcent, anif are insed for feeding hirds. Wheo snbmitted to prossure, they yield abont 25 per cent. of a fixenl oil, whichs is nsed for making varnishes. In the sap of the hemp-plant there exists a resinous snhastance which has extraurdinary narcotic pruperties. In the worthern climates the pro portion of this resin in the several parts of the platut is so small as to have escaped general observation: but it the warimer regions of the E.tst the resionous substanc is sufficiently abundant to exnde naturally from the flowers, leaves, and yonog twigs. The Iodian hemp,
which is so highly prized for its narootic virtues which is so highly prized for its narcotic virtues, is con-
sidered hy some wotanists to he a listinct variety sidered hy some botanists to he a distint variety, and
is distingnished by them an $C$ : sntiva, var. Indica. This herb, and the resin obtanined, are largely emplored in A -ia, and in some parts of A frica and S . Amperica, for the purposes of indnl gence. The whole plant dried is known hy the name of gunjah in the narkets of Cat cutta. The largest leaves and seed-capsules separated frem tbe stalks are called langg, subjure, or sidhep. Th tops and teoder parts of the plants, collected just after the flowering-time, are io some places sold under th name of hashish. The dried flowers, called lief in 3n rocco, contaid so manch of the durcotic principle that intoxicate. The dried pistils of the flower enter ioto
the compesition of the Turkish madjoun. The resin

Her'alalry, $n$. The science which teaches how to represent in certain colure, or by hgires, or to express ia techoical terms, whatever belvags to coat-armor, and natioos, \&c. The origin of nemorial bearings is undoubtedy the same:is that of names of families: a mode
of distinunishiog by sight, as the other is by sonod, a noted individual in society, of a lealer in the ficld. We read of baouers and standards in the Bible, (Fsa. xx. Numb. i5. 3.) and of seals beariog particular devices. (1 Kings xxi. 8 ; Rev. v. 1, 5.) The sculptures on the shields of Achilles and Hercntes, in Homer and IIesiod, are rather ornsmental thall heradic, unt in the deven Chifs repowned leaders are as distioctly blazoned on their in the Midde thes. The lomans had no armorial de vices for individuals, except their distinctive crowns for particular services. Io the first crnsade for the conpartst of Palestioe, A. B 1034, the French shields were of polished metal without any ornament or sign, and io this, and the second crusade, A. D. 1142- , no cugnizances
wera borne, anless the white cross on a red ground which wers borne, minless the white cross on a red ground when served to devignate the French knhghta, and the red
cross on a white gronnd worn by the Enclish, can be cross on a white gronand worn ay thered as such. But in the third crnsade, A. n. 1189 , armorial devices were usml, and in the 13 th century they were regalarly trunsnittel from father to son, and wind them on both the jupon and tubard nutil the reigh of IIfeury VIII. Wace mentions thens as being in usa by the Normans, and the Bayeux tapestry confirms the
ascrtion. It 1216 (kemp. Nen. III.) the vocalulary 11. Was namily as fill and definite ass at the prosent day ad aromernil hearings were displayed on the naame

Interd, arma ite oftem rarer sigat of consianguinity than the summate, is clie Shatha of the nurth Of England are proved to be Melaturhes by their mrman They show the alliance of the bearere to other famalies and thus the manory of many nin anciont and nobl line is preserved, by the yanrterimg of their nram by tion in hfo of the bearer. Apponded to grants mind do fon in hfo of the bearer. Appended to krants mind dos granters which naty have becone illerible. Thas in granturs whin may have becone illegible. Thas granted by the Nemzien, and wher motathex, thongh their names camut now be detiphered. They ofteshow the rizht originations and writiog of enrmanem Chus we know the name of Tarlat to be ineorrect, and that it stand be writter Tarbit, by bering they has three turbints fretted in their tormas, 'They hate jroved thas the cluurch of Darham is knowa to lave beed built lyy the king of Sotland, and the town of Eiffur' by the French king, because they laur their arme. By these sigus even ships of enemics ure known at sent eaptored and confiscated, for what wre the flags of oations Lut a species of heralitic arms? It is a fact perhaps not kencraily known that stojee" to the arma of George Washington. To the Atheriean the wole sellse or interest in theso things cunsists in their historien character, ur, as in the case of indindmas, in the reme-m brince of an honorable ancestry. "He who dees thit to posterity, is a true saying, and no man cau aflord to to the arms of others. The forlai system, chivalry, und the crnsades nude necenshry certain signs and figures to distipguish persons and perpetante grent actione, and the process of reduciog these marks and signs to orler was only a natural coosequeace of the first invention. Hence the necessity for Heraids, and a College of Armis. It is ridiculous, however, to shppose that there must be any annogy between heraldic signs or fignres, and the actions represented. Aur escalop stieli, a matet, or a hawk. have no mure connection with great actions than the souad of a letter of the apphabec has with its forma When we read "the first, azure, a sun in its glory" for of Kurr bas pure than any other with that plorivus lumiuary. Iteraldic signs runst then be taken for the meataing known to be inteated, though there is no doubt that caprice or accident were oltea canses for adopting them. Io early times kiogs and the great feudatories sranted their arms or part of them to their knightly followers, or the latter adopted them; heace the arnus of many familics resemble one another, except in tincture. Many of the most ancient conts-armorial were borne long befors Heralds' College was founded, A. D. 1483 . Since then, grants have heen made by the sovereigns and the kings-at-arms, and no oue in Emplaw the latter have considerable power for the purpuse of prevanting partica (by heavy fises, \&c) from bearing arms to which they are out entithed. In fromer to make this subject more easily uoderstood, it is necessary to give a short acconnt of the conblems of beraldry.-A cout of arms (so called from leing formerly embrodered or otherwise exhilited on a enrcoat, or coat of mail) is a mark of honor, denoting by different figures and colors varionsy arranged and daplayed, the descemp, allinnce, or service of the beatret. Arms are of eight Kiols, viz. of dominam, admpted ly countries or suates,
as the fent-le-lis of France, eagle of Anstria, and of the United States, \&c. : of prefonsion, those of a king the coited stake, der of precmion, the arms of Scotland and Ireland are quartered with the lions of Euglad: of conorssion, or magmeatation, conferred by a ruler for extraurdinary service, as a heart to the cuat of Douglas for carrying the heart of Rubert Bruce to Palestine ; of commzaity, belonging to bishuprics, citieks corporations, companies. \&c.; of putronage, to governors of provinces, \&c, to mark their power or juristiction; of family, paternal or hereditary, belouging to a mar-
ticular fanily to distimgnish it frima all others: of alliance, showios the union of families and relation of in dividuals; of swecession, which accompanoy lordships or an estate, ins the arms of the Isle of Man are borne by the Doke of Athole; of assumption, taken up by indiity or legal rimhe. Tbe filse assumption of arms is not only au abuse, fint an absolute the ft, in many instancee, which canthat be prevented in a free cauntry. It is, moreuver, a contemptible picecof shoblery and flunkey-
 where all differonees in rank are thmelically repmbiated.
The various parts of a cuat of arms consist of - the es-
cutchenn, or whimb, the favorite whape of abich, for the jurjuse of heraldry, in the Norman shin-d, somen hat trinthgilhr in borim, caflect by the Fromeln Concien orn. It tud buy the of any torm. The sliedd of a withen or watifeu in lozengeshaped, that of

Thsy ere used only by the nobility, though there are some exceptious to this rule, especially in scottish her aldry.-The motto, like the crest, may be taken, changer,
varied, or relinquished, when, and as ofted as the learer thiaks fit ; and may even be the sisme as used liy other thiaks fit; and may even be the sime as used lyy othel
fanilies of similar or dissimilar name. When the motto elludes to the crest, it should be berbe over it. Some times a erest-and a shield-motto are used in the sathe arms. By the strict rales of heraldry, women are not Tho badge or dr a helmet, nor use a crest, nor motto.something to be kept in mind by the individnal who bears it. The Mowbrays, duke of Norfilk, bore lions and mulberry-leaves, in allision to their name. The earls of Ahergaventy, the portcullis and rose, the aneient devic of the fimily. (See BabaE.) - Chargerare those figures or things which occupy the field, and are emblematic of individual hiatory or character. Aneiently, army were
simple nad plaio, the heralds of those times being of simple nad plaia, the heralds of those times being of
opinion that the less that appeared on a coat, the nore honorable it was, and therefore the arma of Waldegrave are only per pate, argent, and gutes; of CleStanhupe, argent, eiterly proine and gules ; bate; of forty to a hoadred cuineas will purchase nowaday Heralds' College, a field, as Leigh hath it - "full of charge, but empty of honor." When three char of of one kiod are ased in a shield, two are placed above Whene helow, unless they ars bome upon it fess or pale. When a chevron or chevronel is borne sarmenated by another ordinary, the difference, or mark of cudincy, must be placed upon the highest ordioary. If a file, or
lahel, be used, it should exteod from side to side of
shield, over whole coat shield, over whole coat, we it one or many; but in aingle conat quarterly, it must be placed in the middle of the quarters, over the fess-point of the shield. On a field or ordinary, when one it is latter is placed over a harges ree taken from the dom. From the former we have lions, wolves, beam ke.; from the latter, trefoils, marle (sheaves of berm, trees, sc. A griffin or any ether least is said to armed er langued of any celor, when the teeth, claws, or

ping; When attired, the horns are of that color; when at gaze, it is represented hook favorite emblems, Bulls, hearls and lints of these beasts are borme as charge couped (i.e., cut off), or erased (tera off or jurgil) When fishes are borne perpendicularly, they are said t be haurizut; when placed horizoutally, niant. The dolplun is u*nally represented cmbunved or bent. A pelican is sund to be in her piety when she is represented feeding her young. When her winge are placed back to back, they are said to be indorsed. This bird is commonly depicted pecking ber breast. A peateck horne affronte, with tail expanded, is said to be in his pride ture of which are said to ve armed of the color or tinc ture of which their beaks and talons ure represented eagle and valtare are nsually borne displayed or preying. The cock is said to be armed, crested, and jolluped i. e. referring to comb and gills. Birds are represented close, rising, or volant. Trees are silid to be eradicuted or fructuated of some other color. Leaves, truits, de. are usanily represented proper, i. e., of their matara
color. The escallop sbell, the emblem of the Crusadur color. The escallop sbell, the emblem of the Crusader 16 of common occurrence. Celestial bodies are frequently
met with, as the suo, moon, crescent, nuliets or stars, The uncient heralds were fond of imacrinury animals, a the wyvern, daicorn, dragon. \&c. Suaceus heads, and other parts of the haman body, are not ancommon, and are loorge either whole or in part, as in the arms of the Jsle of Man. Helmets, hackles, horse-shoes, woel-sacks, herns water-budgets, be., are also used-in fact, almost al things fatcifol, and found in mature, contribute to the heralds' stock of charges. - In nuarshalling arias, or arranging the varions coats in one esentcheon-which is mate knowlalogicat pernon-- great cire aud an intiThe bushind may impale the of heraliory are requiren be an heiress, in which case he is to bear her arms on in escutcheon of pretence, and her descendants quarter her arms with the paternal cont. Mer'esy, n. [Fr. hérésie; Lat. harrèsis; Gr. hairesis. from hwireō, to take.] The act of holding epinions opon religions matters contrary to the antherity and teaching presumed to owe obedience. Primitively, however, it was used to designate any opinion that a man or a sect might choose to adopt; and in this way it was applie to the philosophic sucts of the Greeks and Romans. the $N \mathrm{ew}$ Testament, even, the term is frequently nse to designate a rehgous sect, without any reproach being implied. In this seass it is used in Acts $\mathbf{v} .17 ; \mathbf{x v} .5$ x xviii. 22; rnd Jesephns terms the three great Jewish sects, heresies, withont wishing to imply any censure by the Apostles towards those who denied their doc trines, and by the Jews towards Christianity. In the writings of the Christian tinthers we fied the torm en ployed towards thuse opinions which differed from what was deemed to be the dactrine of the Apastles; an ater, when Christian teaching came to be regnlated by eclesiastical conncils, any one who rejected their decisions wats proctaimed to be a heretic; while those who gave their adherence to what was settled by these conn cils were prochinued to be orthodox, which is btill no the doctrine of the Roman Catholic Canrch. It is nece sary that heresy bhonla not be confonnded with schism or with apostasy; the latter implying a conplete renulthe rujection of some peint of discipline, just as heres depotes any diveise poine wuttrs of ductrine. early fathers aye the pumber of heresies as ramering between 80 nnd 150 , although Dr. Lardner, in his "His tory of Heretics," demonstrates that these figures ar somewhat exaggerated. Neurly all the heretical opin ions current in the first two ceuturits of the Christian era appertain to the creation of the worlt, to the con nection leetween Christianity and Judaism, and to the person of onr Saviour. The two great sects were the Ebionites nad the Gnostics. In the 3 cuntory the Munzchava heresy took birth. At the head of this sect was Manes, whose object it was to ingraft opun the teachings of the Apostles the rites tanght by the Persian lius, of Nowation, and of Poul of Sumasata, oll of which arose during the 3 cuntury we reach the great $A$ rian heresy, which formed tho chiefobject of the theological disconssion duriug the tth century. The only new sects which require distinct mention are the Pelagian, which sprang forth in the sth cent, ; the Nestorians, and their adversaries the Eutychians; the Monothelites, the Mimosophytes, and the Putulicians. From the very date of the establishment of Christianity in the Romau empire herosy appears to have been regarded as a crime cogni zable by the civil law; and Constantiae enacted reveral severe laws for its repression, which were continued an extended penalties of heresy ordiained the these enactments The pensy severe, extending to corporal punishment and even to death; and they all procesed on the distinct assump tion that a crime against religion is a crime against the state. These cbactments of the Roman law were em
wodied in the varions codes of the Enropean kingdonz and in considering the history of the Midullo Ages, it i hecessary to recollect that the principle alove referre to, as to the social bearing of the crime of herexy and of other crimed against religion, pervades the whole 6 , tem of metiseval jorisprusience. It is further to be ret membered, that the principles of many of the medieval sects were anti-social and commumistical. as well as op pascd to the dactrines of the Church; and that their eaders, in many instances, by ndopting viotent anm revIrew pron themselses tho punistument of anarchy and rehellion, at well as heterndoxy in religion. Still, with even these allowases. Cathulic historians themsclues admit that the medireval procmlaren against herosy wer In many instances excessive, wa were indeed, also the processes and pemalties of the crimisal code.

her and merod.
Werod'otus, the "Father of History," a native of llalicaroassus, a Durian city io Asia Dinor, was born B $c_{\text {, }}$
484 , and was perhaps alive in the begiuning of the fillowing century. According to Suidas, his father wite moble Iliticaruassian faruilies. Diagusted with the rovnoble Miticaruassian fatuilies. Disgusted with the go ernas tyrant of his native city, he retired for a tiate the isiand of Samos, wbence he acquired the Ionic dia lect, in which he afterwards composed his histury. Tu collect the necessary materials for his great work, entered, in early manhood, upon that course of patient and observant travel which was destined to renuler his name illustrions io all future ages. During his wanderings, he visited almost every part of cireece and its
dependencies, and maoy other conntries, the affairs of dependencies, and many other conotries, the affairs of which are treated io his work, in vestigating minutely the history, manners, and custons of the people. The Shores of the thellespont, scythit, and the thestine, Colchis, the northern parts of Afrus. Ecbationa and evee Babylon, wero the olijects of his nuwearied search. On his return from his travels, he took a promident part io delivering his conntry from the tyrimny of Lygdamis. But the expulsion of the tyrant did not briog tranquillity to Halicarnassus, and H., having himself hecome ae olject of dislike, agatin quitted his native city, and settled, slong with a colony from A thens, at Thurii, in the south of Ittuly, B, c. 443 , llers he spent the retaaituder of his life, and here he
wrote the work which has immortalized bis name. Thus wrote the work which has immortalized his name. Thus
time aml place of his death irre matters of dispute. Actime anil place of his death iure matters of dispute. Ac-
cording to seme ha died at Thurij, and was lmried in cording to some he died at Thurii, and was lmried in the market-place, while others assert that he died ut Hella, in Macedonia. His history consists of 9 looks, Which hear the oames of the 9 Mnses. "Next to the $H$. is the greatest effort of Greek literary genins. The one is the periection of epic postry, the other the pertection of epic prose. Were it nut for the influence which the prlar existence of so nothe a model, even in a different branch of compositios, has evidently exercised on the historiao, his title to the palth of origiaal invention might rival that of his poetical predecessor. In the complexity of the plan [of his history]. As compared
with the simplicity of its execution, in the maltiplicity with the simplicity of its execution, in the mnltiplicity
and heterogeneous nature of its enaterials, and in the and heterogeneous natnre of its anaterinls, and it the
harmony of their cumbination, in the grandour of it* lustorical masses, aod the minntenees, often trinstrative detalls, it remains not only wilhuit equal, but without rival or parallel in the literature of Greece or Europe.
Ilero'ie, $\alpha$. [lat. heroïcus; Fr. héroique.] Pertaining to, or resembling a hero or heroes; as, hrone valor.--
Becoming a hero; bold; illnstrions; valorous; gallant; brave; intrepid; deserving or obtaining distinction liy courage or magnaoinity ; as, heroic enterprise, herozc eddurance.
71. Age. See Hzro.

tablished in the 15th centnry, in some of the Greek monasteries of Monut A thua. These Quietists pretenced
to have attained a perfect interier life of devotional reto have attained a perfect interier lite of devotional re-
poae by intense contemplation. One of their maxims, apparently derived from sune of the strunge practices of the Indian ascetics, directs the disciple to - ratike bis spirit above all viin and trinsient things, repose his head on his breast, and turn bis eyes with his whole power of meditition upon his navel." Hence, these (Canionaries derived the Dicknmme of Omphalopschon (Cantacnzenus, ii. 38), or Umbilicarii; they were also termed Thobrmites, from their notion respecting a divine light inbabiting the heart of the devotce.
IHetre'ria, $n$. [Gr. hrtaireia, companionship.] (Hist.) A
Word frequently used by classical writers to word frequently used by classical writers to signify an association of any kind; thus the fraternities of the two celebrated associations umong the Greeke have assumed the name. Thefirst was the Hetaria of the Plit the purp or Friends of the Mnses - a $80 c i e t y$ formed for the purposes of education, fonnded (it is said) lyy Capo and elsewhere, and numbered at one time 80,000 thens and elsewhere, and numbered at one time 80,000 asso-
ciates. It was dissolved in ] $8 \cdot 21$. but repewsed in 1824 when A thene was in thehande of the Greels. The 182t, famons political IIeteria owes its foundation to the celelorated ligas, who died in 1795 . It was renewed abt, 1816, extended its ramifications throngh all Greece, and produced the Greek revolution, begua by Ypsilanti in $18 \% 1$. Hetcis'el, $r, ~ a$. See HArcuEL.

votaries a whole month before the festival, by others three days, are empluyed in initiatory ceremonies of purification and devotion, When the first day devoted to it arrives, an npright pole twenty to thirty feet in height is erected, and across its summit a horizontal
beam is pleced to move round on a pivot. From each beam is pleced to move round on a pivot. From each
end of the beam hangs a rope, the ope loosely, and the end of the beam hangs a rope, the oos loosely, and the
other with two hooks attached to it. Ths performance other with two hooks attached to it. Ths performance
now begins. A devatue cooning forward prostrates now begins. A devatue eoning forward prostrites
himself, and is immediately fastened to tho hooks, which, for this purpose, are ron throngh the flechy parts of his back uear the shoulders. The end of the other rope is then seized by a number of persons, who cornmeace running round with it at a rapid pace. This motion is of course commanicated at once to the hooks, and the wretched devotee lifted up into the air is swang round in agony. Were the flesh to give way,
the force with which he is whirled, as well as tho the force with which he is whirled, as well as tho height, would projeet him like a shot from s gno, and
his death wonld be inevitable. The devotee loy piving his death wonld be inevitable. The devoteo by piving
a signal may be relieved from peril and torture, but hu a signal may be relieved from peril and torture, but hu
is in to haste to give it, and usually remains suspended is in to haste to give it, and usually remains suspended this is a religious service the merit of which is proportirsoed to the length of time the agnony is emlured! The moment he descends and is taken off the hooks, noother steps forward to take his place, and the machine is kept wheeling till the day is far spent. In estimatiog the aggregate amonnt of suffering inflicted, it is necessary to remember that these horrid swings were not confind to the suburbs of Culenta, where Kuls's temple stands, but that in thousands of towns and villages throughont Bengal they were in simnitaneons opleration, torturing
the infatuated dovotees, while muititudes of spectators the infatuated dovoteos, while mintitudes of sper
IIIn'loos. (Liferature of the.) In common with their religious traditions and the invention of their alphabst, the literature of the IIndoos is of the highest
antiquity. Nearly all the literary compositions of the antiquity. Nearly all tho literary compositions of tho
Ilindros are in verse. "For history," ealys Mill, "they have only certain narmative joems, which tepart from all resembluce to truth and naturi, and have evidently no further connertion with fact thay tho uso of certain namesauda few remutuallusions. Their laws, Iikn thase of rude mations in general, are in verse. Their sasered
books, nat even their lowiks of seience, are in verse; aud, what is more wonderful still, their distionaries, "1
Because men fond beffure they speculate, therefore is Bectuise men find beffure they epoculate, therefore is
poetry, whirla is the earlinst form of "xpressing the feedpoetry, Whirla is the earlisst furn uf "xpreasing the fect-
the Sacred Literature: Under the general term of Shastrus, the Hindoos prosess the foor "Vedas," uamed respectively the Rig, Yajosh, Sama, and Alhurva; the four Ghavedas," or "Sub-Vedas," - the Ayash, Dhanush, gas; and, fiaally, the "Upangas." The Fedas ant writtell in Sanskrit, (see Hindostan, Lanouages of.) as is the Mantras, or prayers, the Brahmanas, or comonandments, and, in short, the whole body of the Hindoo theology proper. The Upavedas furm a second class of saiciue, musie, dancing, war, srchiteeture, and many mechanieal arts. The Vedangas, or Six Angas, are trentises
change, wand subsidiary to the Vedas, and compreliend rules for reciting the Vedas, and especially as regards the accent and tones to be olserved; a treatise on graminar; besides dissertations upon metres, astrology, and astronomy. These works are held to lave been given by inspirstion of God, to enalle the Brahmins to read and understand
the Vedas. Thus, we here perceive a double iospiration, the Vedas. Thus, we here perceive a double inspiration,
that of the Vedas and that of the Angas, the latter that of the Vedas and that of the Angas, the latter
forming the key by which the Vedas are opened. The forming the key by which the Vedas are opened. The
Upangas, or inferior bodies of learning, comprehend Upangas, or inferior bodies of learuing, compreaend
logic, theology, the institutes of the law, and certain legreadary treatises, to the unmber of eighteen, which hear the name of Puranas. We will give a hrief sketch of these latter. 1. The halika Ahhiatma Radess Ksli Parrati, the wo the listory of Ramatshandra. 3. Bramah Vaivartika treats of the origin of the gods and the mistory of Gantesa, Krishina, and Durga. 4. Iedma Purana is the praise of the lutus, (pedma,) and a history of Lakshmi, the wife of Vishon, in 55,500 stanzas. 5. Agru Purana forms a sketch of
all Hindoo science, in 15,500 stanzas. 6. Vishnu Puall Hinduo science, in 15,500 stanzas. 6. Vishnu Pru-
rana, in 23,000 stanzas. 7. Siva Purana, in 24,000 stanrana, is 23,000 stanzas. 7. Sira Purana, in $2+, 000$ stan-
zas. 8. Linga Purona. S. Scanda Puruna, of the gud Scanda, the son of Siva and Bhavani. 10. Relates to religions customs. 11. Ontkal Khanda and Kasi Khunligious rites of Vishau; the latter a history of the city of Kasi, Dow Benares. 12. Containa the history of Nareda, the god of mnsic, in 25,000 stanzas. 13. MurKandrya Purana. 14. Bhawusia Purana. 15. Faya Purana, the history of Vaya, the god of the winds. 16. Matsya, the history of Vishon as the fish, in the first deluge. 17. Contains a history of the same god as a man-lion. 18. Treats of the history of Krishna, or
Vishon, in 12 books. The two oldest and most imporVishnn, in 12 books. The two oldest and most important epic poems, which are ulso classed among the sa-
ered books, are the Ramayana, containing the history ered books, sre the Ramayana, containing the history
of Ramatshandra, king of Ayodya, the seventh great of Ramutshandra, king of Ayodya, the seventh great
inearuation of Vishnu; and the Nuhabharata, detailing the war of the l'undus nid Kurns, consisting of is books end upwards of 100,000 stanzas. - We shall now proceed to touch, in a brief manner, npon the Profane proceed to touch, in a brief manner, npon the Profane The Shogdiabodha, or "Beanty of Knowledge," by Goswami, is held to be the best Sanskrit grammar. There are in all eighteen dictionaries of high reputation, but the Amarasinha is deemed the best. The poetry of the Hindoos hetrays throughout an elegiac earuestuess and sweetness which owes its origin to their oldest poet, Vaimiki, who sang in plaintive strains the murder of a
yonth who lived happily with hiy mistress in a beantifnt yonth who lived happily with his mistress in a beantifna
wilderness, and was mourned by her ia heart-realiag wilderness, and was mourued by her ia heart-reatiog,
lamontations. Anuong the dramatic poets is Catidns, lamentations. Anubg the dramatic poets is Caidns,
who has been called the "Hindoo Shakspeare." His finest drama is Salioontolah, or the "Fatal Riag," which has been translated into Finglish by Sir William Jones, has been translated into English by Sir Werman by Forster, Herder, aod others. Aeeording to Herder, the scenes of this grent drama "are connected by fluwery hands ; each growe out of the subject as naturally as a beautiful plant. A multitade of sublime as well as tender ideas are fonud in it, which weshonld look for in vain in a Grecian drama." Another grest drama of thisauthor is the Megha Duta, or "Cloud Wilkiager, The Hindoos have two kinds of feet in their verses, and also two kinds of rhyme; the one falls on the first letter or first syllable of the verse, and is called yoty, or vardi; for example, $k i$ in Firti and kirtana minke llable frum the commencement and is called prusam, for example, pa in copugny and dipantram. A mong the most important philosophical works of the llindoos there are, Gangheswora Phtwa Schirtamani, which is treatise on metaphysics: Pratikhya Tip-Didhltit is a reatise on memory; Smriti Tafiva is an abstruct of the aws; and Hitopradesa, a Hindon book of fables, called also the Fubles of Bidpay, or Pilpay. This lntter was the first work published in Europe in the Inulno language It appeared in 1810.
Llin dostan.or I vDr E Elstop the Gavgee avo BranmaPuotra, ae distinguishod from innia deyond tbe Givoes, or Furtiner Inms, (in the European sense, a vast reprojecting S. into the I mdian Ocean, or in other words comprising the whole of the great friangle of country comprising the whole of the criat frianigio of country abth deg. of N. Lat., to Cape Connorin, or about the Sth deg. It is bousiletion the N. ly the highest ramge of monntains in the worli, the Himalayas: by the two Kreat rivers, the Inilus nud Brahmapootra on the N.W. and N.F.: and in esery other direction hy the mon nume for themselves or their conntry ; but their pervinn nefighors culled the people ffindons, antl the , whe Eurloh, which, literally rondored Negro, and Niggrolund. The compro-
hensive sense in which the ferm " Hindoston" is now employed, as distinctive of the entire territory S . of the caste prevails, is of Europesu origin; the people of the conotry confiaing the term to the region lying N. of the Nerbudria, and calling all to the $\mathbf{S}$. of that river the Deccan (q. v.), a word derived from the Sanskrit, and meauing "the right hand," and also "the south."

Hip'posriff, IIip posryplı, n. [It. ippogrife, from Gr. hippos, horse, and gryps, griftio.] (.Nyth.)
A fabulons animal, represented as a winged horse, with the head of dragon or griftio.
Hippolyte, (M,tht) a queen of the Amazons, given ber, and taken away her girdle by order of Eurysthens. She had a smo by Thesells, called Hippolytus.
Hippolytus. (Myth.) a son of Theseus and llippolstec. fell in love with him, and when he refosed to pollute his father's bel, she accused him of offering violence to ber person before Thesens, who, believing the accusation. entreated Neptune to punish bis son. H. fled from the rescutment of his father, and, as he pursued his way along the ceashore, his horses were so frightened at the
noise of seacalves, which Neptune had purposily sent noise of ceacalves, which Neptune had purposily sent
there, that they ran shout the rocks till his chariot wubroken, and his budy tora to pleces. Upon this nisth, Buripiles founded his play entitled Hippolytus.
Hippol'yins. St.i) bishup of Portus, (Romas,) near century; was chituly renarkabie as the presumed author of a work oo Heresies, hitherto attributed to Origen, The Chevalier Buns $n$, is few years since, wrote a Work called " Hlippolytus," in which, whale giving the arguments on botb sides, he pronounced himself ati advocate for the claims of Ilippolytus to the autborship of
the work in question. Lived during the Sd century. Hip'pomane, a. (But.) A gen. of plants, ord. Eaphor-

IIisforiograph'ie, $a$. Relatiog to historiography. historios rapliy, $n$. The srt or employment of an IIIs'tory, $n$. [Fr. kistoire; Or. historia, from historeo 1 inquire.] Literally, an account of facts. Tbe word title Historia; and this ancient writer there can be but little rlonlt that has since been applied; that is, as meaning the scienc which treats of man, in all bis social relations, religions, aloral, commercial, political, or literary, as far as thes are the result of general influenees extending to large masses of men. Embracing both the past and the present, history consequeutly considers everything which aets upos mes, 一 regarding them in the light of memtions in which man exists towardy his brother men, abi should detail the infinences to which he is snlujected the motives by which he is itctuated, and the inference drawn from the same, with clearmess and truth. A cordiag to some commentaries, $H$. may be either con sidered in the light of an intellectusl exercise in the de partment of human knowledge or science, or as a form of literary composition. Bacon reckoned it as the chief component part of learning, and studied it is its rela tions to mentory, while he placed philosophy and poetry below it, as appealing only to the understanding ant or remember the events, past and present of the world or remember the events, past and present, of the world, and to place them down in such a way that they cal hasve the best hold on the memory, by appealing to is the true definition of the word used by Herodotns, althongh it has lueen amulogieally used to express other oranches of investigation, as in the term natural $H$., still in use; and some of the ancient writers defined the general use of the word by their adaptation of it; ns,
Aristotle's $H$. of Animals, and Theophrastus' $H$. of Aristotle's $H$. of Animals, and Theophrastus' $\boldsymbol{H}$. of
Plants. The civil $H$. of nan has been somewhat arbitrarily subdivided into several branches; ns, civil or bibilicul $H$. (the $H$. of states and empires), ecclesiastica $H$. (the H. of the Christian Church), sacred $H$. (the his turical part of the Scriptures), profone $H$. (or $\boldsymbol{H}$, written by nuiospired authors). Our most sneiont civil 11 . is found in the Old Testament; bnit its objects are confined Jewish race than a general description of other nations. who were also connected with theur in relations of amity or war. Of Assyria, Ejgypt, Phomicia, and ancient Por sia, Curthage, \&e., we pussess no historical notice, except snch as is derived:- I. From Jewish or classical authors; 2. From monuments, especially in Egypt. With respect to Persia, much industry has been expended in
endeavoring to extract from the historjes of modern endeavoring to extract from the histories of modern
native writers coincidences with the narrations of Greek and Roman authers; and the recent discoveries of Lay ard. Rawlinson, and others ure thought to have thrown arid. Rawhimson, hind others are thought to havent on this branch of our sulject, thongh their full value is not us yet determined. The poems of Homer are generslly remarded as containing the oldest framments of Grecian $H$.; but from these we can inter little more than the existence of certain towns, or the prevalence of certain customs, at the time in which the poems were composed. An examination of the Trojni Aryan race, hats shown that there is no real gronnd for theories which cuanect the war of Troy with the move ments of IIellenic colonists in W. Asia, or with uny other palitical caases. Ilcrodotus is the oldest Oree prose writer. His invalubble 1 . eomprises a deseription terraneat, concise narratives of Euyptian, Pernian, an terranean, concise marratives of Esyptian, Perbian, ami
Anayrian 1 ., und a comnectol accomint, more or has deAkyrian $H$., and a connectal account, more or less de
tailed according to circunitances, of the $H$, of Grece looth ctvil and donsestic, for whont 50 yimes previons th the invision of Xerxue, with which his anmals cless
 about it century afterwards. Atter that periond, our knowledge of Gireek dumestio 11 . is confined to the iuci-
dental notices derivod from contemporary writers and he general contpilations of later historians, varyiog may be neutioned, as suthors from whom s large thes tion be meur actual koowledse is derived, Diodorns se porthe suthor of a very miscellaneons general $H$. of which reat part is lost, whe lived alrout the age of Aurustus Polybius, whose $H$. is more especially devoted to Roman sflairs ; Arrisu and Quistins Curtius, the historians of the coaquests of Alexander; Livy, as to the transaction between Greece and Rome; Justin, the compiler of a brief but useful abridgment of geoeral $H$.; Plutareh, in his Lives of 1llustrious Men, \&c. These writers lring the stadent down to the period of the Euljagation of Greece by Ronse, after which sll $H$. of Greek affairs, of what is known as the Eabtern Empire stablishmen little knowledge of the Etate of Greece and the Grace Asiatic kingdoms in their provincial state. Ancient Asiatic kingdoms in their provincial state. Ancient
Roman $H$., down to the first Pnnic war, is chiefly known from the compilations of Livy and Dionysins of Halicarnassns, writers whose eredit is rendered extremely donbtful by nodern investigation, and, where these fail from incidental sources. In the $\boldsymbol{H}$. of the Punie wars,
the narrstive of Livy is aided by the admirahle work of the narrstive of Livy is aided by the admiratile work of
Polybins. From the end of the accond Pnaic war to the Polybins. From the end of the accond Pnsic war to the dictatorship of Sulla, nearly 150 years, our materials for Roman $H$. are very deticient, the want of contemporaty writ-rs being eupplied only by later compilations, and rarions snbjects, the conrse of whose connositiou led hem to tonch on pait events of whom the most ved able is Cicero. From the period of Sullat's dictatership to the accession of Vespasisn, nearly 150 years, we hare the mivantage of a succession of contemporary writers, ome of them actors in the events which they describe, and comprising sone of the greatest bames in literature - Sallust, Cicero, Casar, Velleins, Paterculus, Tacitns. Iet even bere there is one considerable lacuna, comprising the last thirty years of the reigo of Angustos, ss to whicb onr knowledge is seanty. From the nccession of Tespasian to the reign of Constantine, a long period elapses, during which our historical acquaintance with part of the civilized world is vacome and defective, Dreater part of the civilized world is vagne and delective. Dhon
Cassius and Herodian are the two best writers on $H$. Cassins and Herodian are the two best writers on $H$.
who can he named in this long interval. The latter during the short epoch which he illustrates as a contemporary, is full and valuable. After the accession of Constantige, we have abnndant materials for $\boldsymbol{H}$., both ecclesiastical and civil, from the hand of contempersry authors, down to the reign of Justibian in the East and of Theodoric in the West, althongh the quality of the writers is sensitdy degenerated. Perhaps the compara tive obscurity and uncertaioty into which $H$. is phniged after the last of these two epochs, and the shacence of all standard writers after Procopins, render it the hes period to fix upon for the arbirrary limit between ansummary, that the only periods of any extent as to surnmary, that the only periods of any extent as to
which we have the nssistance of contemporary histurians, or original authority properiy so called, in the
whole extent of classical H., are:-I. As to Greece from B. c. 500 to B. C. $380 ; 2$, as to Rome, from the die atorship of Sulla to the accession of Vespasian, B. c. 76 to A. D. 70, aod finally the reigns of Constantine and his successore. After the downfall of the Roman Empire a long series of revolutions in dyousties end nations followed before W. Europe was parcelled out into the several great conntries which, notwithetanding all subsequent changes in political limits, have siuce subsisted as geographical divisions - France, Spain, Britain, Italy, fore the three great conntries of E. Europe (Russia, Po land Hnugary) were added as distinct members to the family of European states. From the abdication of deposition of Augustulns and the so-called fall of the Roman empire to the reviral of literatnre, a period comprising is round numbers nhout II oenturies, our knowledge of the affairs of W. Enrope is derived from : eries of writers, in each country, who are nsmally con rehender under the title of chromiclers. A chronicle or hook of annals, is properly a H1., of which the contionons narrative is so interrupted that each year forma a separate section, and events are thas related in nearly strict chronological orier. This is a form very comwhon thepted by the listorias of the dark ages, of Whom the greater presportion when in the forms of claronicles; they huve nill the requisites which the most fastidions criticism can require of a reps ular history. Tho veneratile Bede, who wrote in the 9th century, presents us with the first mune of true credit and nuthority among the annahists of England. Of the monkish Latin chroniclers in later times, Mutthew luris is perhaps best entitled to the character of an historian. After the period of the invalnable Suxon chronicle, we have no vernacular Eurlish hiktories worthy of note, with tho exception of a few mengre rhyming chronicles, until the revival of letters and diseovery of printing. It France, the long coliection of mative Latin claronicler presents us with few anmes of interest after the time calleal forth, for a eloort epace, an numsual apirit of lise carreal idescription. Whess wo arture, howneve, it the 14th and 1ath centuries, we find ramong the mative French histurians two anthors of great value ne iuti mitely acquinted with the events of their own timen Froixairt und Phitip de Comines
are to the nought in the paces of a long surfies of chironiclers, from the sth centary downwards, of whom the

graphö, 1 trace.] (Muth.) A curve imazined luth, and Hamilton to illustrate the theory of central forces 11oe, (hō,) n. [Gier. hake, from A.S. heuwun, to hew. Hew. ] (Agric, and Gardening.) Aa instrument for stirring the surface of the soil, cuttiog np weds by the roots, and earthing up plants. The hatiohere is a thin plate of iron 6 to 8 inches broad, and sharpeaed on the edge, fixed at right angles on the extremity of a pole or rod which serves as a handle. This is called a druw-hne, becanse in the operation of hoeing the instrument is druwn or pulled toward the operator. Another kind of garden of the handle, and in continate fixed of the extremity of the bandle, and in continnation of it; and this is ways pushes the hoe forward. This hind is also called the Dutch hne, must probably frome having lheen first intro duced from IIuliand. In agriculture, hoes of the thro kind are drawn by beasts of lorden, and compoonly called horse hoek. In general form they revemble it plongh; bnt iostead of the share they have one or mor rron blades or plates with sherp edges, fixed to perpen-
dicnlar iron ruds at their lower extremities. These dicnlar iron ruds at their lower extremities. These
sharpened plates being drawn through the soil, ent sharpened plates being drawn throush the soil, cnt
through the roots of weeds an foch or two beneath the surface. Agricultural or field hoes are only nsed in the case of those field erops which are sown or planted in hoes, chiefly differing in the sumber of hild or horso attached to the common frame for stirring ind eleanime a greater or smaller number of spaces betwees the row of drilled crops at obee.
Iloe, $v, n$. To cut, dig, scrape, or clean with a hoe; to clean fron weeds; as, to hoe the soil in a garden, to hoe cord, de.
IVee -eake, $n$. A coare cake of lodiao meal, baked Ioéisur, a johiny-cake.
IIoe'ins, n. (Arric, nnd Garioning.) The operation of stirring the ground, cntting of weads, or earthing ap plants with a hue. In the cave of any of theme operations dry whiner must he chosen, otherwise the result will in wet wrather will produce frusl nuts and byin the hose while plante earthed op noder similur circumstain, will hatve the leaves which are covertal by the soil tom cayel lyy it. In either cuse also the groundi will he hardened by the trealing of the feet of men or lanrses so as to obstruct the progress of the roots, nad to evelude air and water from prenelrating through it to them. II. is sometimes preformed on surfaces which nro withunt
weeds for the purpose of atirring the woil, but in anch Weeds for the purpose of etirring the eobil ; but in anch
cases pranged hoes, or hoes having three or moro long cases pranged hoes, or hoes laving three or moro long
spikes or tyeth, are more oflective than hoes with broad
pintes or filades

Leonard, in the ralley of Passeyr, 1767. When the the Anstrian dominlons, was given by
the treaty of Presburg to the king of Barvaria, then the ally of Napoleon, the Tyrolese revolt ed, and Andreas $H$. became theirleader.
Withio a week from Withio a week from
the outbreak of the the outbreak of the insurrection, eariy
in April, 1809 , thie Bavarian forces were everywhere
defeated and the Tyrol freed. Three French armies then invaded the prov-
roce, aud after tem joce, , wd after tem-
purary 6uccess on their part, 110 of
won the victory of won the victory of
 again freed lis conntry. By the ar
mistice of Zuaim, agreed to after the victory of Napothe Tyrol. A gecond French invasion compelled to quit and the people were a thirl time freed. For a few weeks $H$. was, virtually, eovereign of his cundry; lint on the renewed invasion of French and Bavarians, he was betrayed to his enemies, condemned by a conrt-martial at Mantua, and shot Kebruary 20, 1810. Il is remains wers buried in the eathedral of Innspruck; his widow Was pensioned by the Anstrian goveroment, end his son Hoffinan rank of nobility.
Hovelist, D. in New Fork, 180\%, an Atnerican poet and novelist, d. in New York, 1806. After leaviog Colnmbia College, $H$. was called to the bar at New York, where hs practised during three years; lut, compelled by th in 1834, a record of his wanderings, vuder the title of A Winter in the West, which obtajned a coneidernble share of popularity. This was followed ly Wi/d Scenes in the Forest and Prairic. is 183i, and the romance of The Greyslaer, in 1840. From the abose period to 1849 be has been one of the most active and successfal contribntors to the American numgizines, for one of which The Aderican Monthly," be wrote his novel of lan derlyn. In 1842 he published a collected edition of his poems, under the title of $A$ ligil of Farth, and other Literary World ? wears he was at the head of the "Literary World," in which he wrote his sketches and essays, puder the title of Sketches of Socirfy. An un stupped his brilliant career, during wish suve for hit love of the horrible and repplsive, he minht huve for hi rank among the best nodern novilists. D. 184.
Hoffman, or II offmanin. There have been several Geronans of this nathe distinguished for their medical kuowledge.-Moritz Hoffmann, b. in 1621. at Fiirstenwalde. in Brandeuburg; settled at Altorf, where he held the professorships of unatomy, lintany, add physic; wa the discoverre of the pancreatic diact: D. lifas. He Wrote several works on medical suljects. - Frieorica Hofpuan, tho most celebrated of the name, was B. it eminent physician. He studied and lectured at Jena eminent physician. 110 studied anul lectured at Jena, Endeland, and formed an acquainetince with 16 the visited other men of science. On the establishment of the university of IValle. he was appointed primary professor of medicine and oatural philosaphy; and thrice held the situation of rector. His reputation heing now fully established, and his fame withly spread, he was elerted a member of varions scientific nssociations in louden, Berlin, and St. Petersburg ; ant appointed physican to the king of Prussia, who gatve him the title of first physician and aulic comncillor. His works are very numerRationalis and Mrdicind Consullatoria Hema Mrdicina nuch reputation lydzcind Consml/atoria. H. ohtained manch reputation lyy the new hypurdirsie which he sug-
gested on the oripin of diseast, and which, ifter serving gested on the origin of diseast, and which, after serving and sounder hypotheses. D. $1,42$.
EaIThan. Finsst Tueonob Whinelm, a German nor elist and miscellaneous writer, was o, at Kimikshore, in 1i76. He studied the law, and held various julticial appointments in Poland, till his Ingal careser was interruptel by the invarion of Warsaw hy the French, in Ivib, in the gevernment of which city he lind been appuinted connsellor. Haviug devoted his leisure time to the stuty of mbsic, and heing at the eame time a ro-mannco-writer and an artist, ho applied himself to these prorsuits in orctar to ohtain a liselihood. He pomecesed proute liver, of a fiery tompur, exceedingly vain, and pronte liver, of a fiery tompur, exceedingly vain, and
suffered mueh from hypuchomin. Among his norks are Rentasy Piteces, The Denul's Filisir. The Eintuil. The Adperatry. \&e, all dieplaying a singularly wihd and romantic imaribation. In $1 \times 16$ he wax roinstuted as

 1sel he was nppintind conservator of the Breslan Uni-
 lat. He has written songe for children, ler workmon

During the succeeding confliets at Contreras, CheruDusing the succeeding confilicts at Contreras, Cherutepec, he also took an active part; lint in 1853, resigu ing his commission, he settled upon a farm near Sunoma California, In 1858 be was appointed Superintendent
of Malitary Roads in Oregon, and surveyed a line from Stillicome to the 49th parallel on the E. Lank of Puget Sound, in Waslington Territory. From 1859 to 1561 he was Colunel of the California Militia, and on the com mencement of the civil war was appointed Brig. Gen of U.S. Volunteers, and assigned to the detence of Washington; he was afterwards engaged in the Siege of Yorktowb, and, in May, 1862, promoted to the rank of Mitj, Gen, of Volnnteers. In the subsequeat battles of Williamsharg, Fair Oake, Gleddale, Matrern Hill, and in many other less important engagements taking place between May and Auginst, 1862 , his condact firmly esllooker," given him by his soldiers in thenting Joe Virginia Campaign Gen. H. commanded a division, nod wits engraged in the battles of Bristoe Station, Mroassias and Chantilly. At the battles of South Monntain and Antietam he was in command of the right wing of the army, and took so distingnished a part in these import:tht actions as to elicit the highest praise from Gen. McChilan. In the latter battle Gen. U. received a gevere Wimml in the foot, bint by Nov. 10, however, he was again in the field, and assigned the oobimand of the 5 th
Corjs. Suon after he was placed in command of tho Corjps. Suon after he was placed in command of the
Centre Grand Division, and finally of the entire Army Centre Grand Division, and finally of the entire Army
of the Potomac, in which capacity he was present in the bnttles of Frudericksburg. Kelly's Ford, and Chanwas engus het weal Get, Mos, wat Clattam, Men. Is was engugrd in the operations alunt Chattanonga, takthe capture of laokont Mountinin, and the mittle of Minsiunary Rialge. On Jan. 28, 18is\&, be roceived the thanks of Consrevs "for the skill, energy, and endurance which firct covered Wawhingtom and Britimore from tho aneditated blow of the advnacing abil powertul army of relsels lid by Gren. Roburt E. Laee." In the invision of Georgir he commanded the 20th Corps (Army of the Cumherlund), and took part in the combat at Mill Creck Gatp, whi the hattos of Rewaces and Datlas, besides that
memorablo approach to I'ine Mountain, May 26 to July

2, which was marked by almost daily severe engage ments. Then followed in rapid eaccession the pursuit of the equmy to the Chattahoochie; the actions near Atlanta; the comlat of Peach Tree Creek; and, finalls the siege and capture of A tlanta. From Stpt. 2s, 1864 to July 5,1865 , Gen. $\boldsymbol{H}$. was in command of the Northern Dept, witis his headquarters at Cincisnati, Ohio. He retired from active service, at his owo raquest, on full
rank of Maj. Gen. Oct 15 , 1868 . D. Oct. 31,389 . Hook'er, Richatid, an English divine, b, io Derbyshire $150 t_{+}$Me took orders about 1581, and soon after married Joan Churchman, who brought him no beanty, nor money, nor peace. After holding some minor preferment he was named Master of the Temple, in 1585. The controversy in which he was there involved with the Puritan, Walter Travers, is said to have occasioned the project cf his great work, The Laws of Ecclesiastical Polity. For quietness and leisure in its composition, he removed to Buscombe, in Wilssbire, in 1591, whence four years after he went to Bishopsbouroe, in Keut, and besought no higher preferment. Four hosks of his "Ecclesias tical Polity "were published io 1594 , a fifth is 1597, and the last three after his death. 1ts profuund philosoph queoce of style, have given it a place amony the and eloqueace of Eje, have given it a place among the master-
pieces of English prose literature. D. 1600, His life was written by Izaak Walton.
Hooker, Sia Willam Jaceson, an English botanist, D. at Norwich, 1785 . He carly devoted himself to the study of nature, and soon chose hotany for his epecial pursuit. Betweed 1806-1814 he made extensive travel or the purpose of collecting plants, and became the frieod and correspondent of the most eminedt men of science of his day. He was kniglited by King Willian 1V. in 1836 , and five years later was appointed Director of the Kew Gardens. His botanical works are very
numerons aod of standard anthority. Among them are his Tour in Iceland, Muscolegia Britannica, Flora Aco ica, Erotic Flora, British Fiura, and Icmes Filicum tho ica, Ezoic Floro, British Flora, and Icmes Filickm, the last published in conjudction with Dr. Greville. $H$. was
F.R.s., a vice-president of the. Lioneae Suciety, Oxford, p.e.s., and a member of the Legion of Honor. D. 1865 . D.c.l., and a niember of the Legion of Honor. D. 1865 .

- His son, Joseph Daltos $H$., B. 1816 , is a somewhat distinguished botanist, aod author of many valuable works. He has succeeded his father as Director of the Kew Gar-

Hor'ace. Quintus Horatits Flaceds, a Roman poet, b near Venusia (now Venosit), a town of S. Italy. on the thoogh for man of elevated and liberal sentiments, and took the greatest pains in providiog for his soa's education. At the age of 18 yerrs he went to Athens to coanplete lis stadies; and while there, Marens Brutos passing throngh by other Roman youths, joined the army ; berame military tribune; fought in the last bottle for the friceloro of Ronte at Philippi, and saved himself by flight of Ronie at Philippi, and saved himself by flight
Thongh he saved his life, he forfeitelt his wstate, and wis reduced to great want. till Virgil introduced him to Macenas, throngh whose interest he recusered his patrimony. Angastus now became his friend, nnd offered to Mecenas was sent to Brandusinm to cunclude a treaty between Augnstus and Anthony he took with him Iforace, Virgil, and other literary friends ; and, nut long after, he presented llorace with the Salhine villa; to which, hasing witnessed such striking examples of the instabinity of forne prepring retiruput to more licilliunt life Rome, preferrimadels of that kind of composition, an his Epistles and satires abund with acute aud yusuchutu observations on life and manners: while bis Ars Purtica, so often quoted, presents, under the furm of a lutter to the Pisos, lut with gracefol precisiun, the dithiculties of portical conposition, sud the principlen which shonld ghide the puet in his work. Wint of लpace prevents ns
from dwefling on the pucular unorits ot a claswical port: but we may say with u cutnpuetent antlority, that " the easy, ugreeable manner in which he philosoplizus with
 expressed binuself, wfora the oust agroeable entertain-
ment. His descriptions are still applicable and inter esting, and the poet will therefore ever remain the
favorite of those whose morality dous nut exclude the favonite of those whuse uorality dous nut exclude the
refinements of life." Horace died suduenly, in the year refinements of life." Ho
of Rome 746 , and 8 B. c.
Ho'rae, n. pl. [Lat.; Gr. orai.] (Myt.) Divinities regarded in two points of view - as the goddesses of the reasons,
aod of the hours of the day. Their duty was to hold the gates of heaven, which they opened to send forth the gates of heaven, which they opened to send forth
the chariot of the sua in the morning, and receive it again in the eveoing No clatesical poet has described again in the evening. No clasical poet has described
them with greater beanty than shelley, in hiv /rome theus Cabound. These goldenses are often depicted as forming the train of Aphrodite or Fenus.
Ho'ral, a. [Lat. horalis, from hora, an hour.] Relating or helongiag urint." - Prior.
II'rary, $a$. [Lat. hovarius, from hora.] Pertaining to at hour; noting the bours; as, a "horary inspection." Butler.-Contiouing an hour; honrly ; happeniug once
an hour. an hour.
(Astron.) The apparent motion of a celestial body in un hour. The npparent horary motion of the hearealy bodies io their diuroal revolution is the twenty-fourth part of it, or $15^{\circ}$, minst be passed over in one hour.
Horatian, (ho-ráshan, a. Relatiog. pertaining, or baving reference to the Latin poet Horace; after tho Iora'tii and Curia'tii. (Rom. Hist.) The Alhans laving invaded Rome B. c. bio, it was resolved to docide the contest hy a battle vetween three champions on each side. Three twin bruthers having been found in Ahth araies, the Romans named the Horatii, and the Arosted to them, the issue of the strugs was in quished in the fight whicls followed, Allia was forthwith quished in the Gght which followed

IIOrol'ogy, $n$. [Gr. höra, any limited time or periodan hour, and logos, treatise.] That branch of scienc which treats of the principles and construction of mat chines for messuring and indicating portions of time According to Locke, to is "the cousideration of the duration, as sct ont by certain periods and marked liy certain measures or epochs." Accoriling to Aristotle, " ols conception of time originates io that of motion, and particnlarly in those regular and equable motions car ried on in the heavens, the parts of which, from their perfect similarity to each other, are corract measure of the continnous and snccessive quatutity called tine with which they arc conceived to co-exist. Time, there fore, may be siad to be in the perceived number of suc cessive movements," Undonbtedly the motions of the heaventy budes form the hest standard for measuring computation of sach short divisions is biones for the and seconds, we must call to our aid certain mathematicaily auljusted machines, the knowledge of whose con struction is regnalated hy the science of $H$. The "t father of history" ascribes the inveation of the earliest timemeasurers to the Babyloniaas. Pliny claims the honor for Anaximenes; while Phavoriuus wishes ns to accept Anaximader as the real inventor. At any rate, the first horologia of which we find mention are the Polos and Gumam. The latter, which was the nore simple and, it may be inferred, older instrument, consisted merely of a staff or pole set up perpendicularly in a suony sput, its shadow being measiured upon the place where
it fell, and time computed thereby. The Polos, or $H$. liotropion, was formed of a basiny. The Polos, or $H$. divisions of the day were marked ly lines, these the shadow of a perpendicular staff, set ap in the centre of the instrument, was thrown by the sun. (Sve SoN-DIALS.) Surh instrummots ats these mast have lieen known to the J-ws, who are inferred to have derived their knowledge of them from the Bubylonians; for w find mention made in Isaiath xxxviii. \&, of the dial of Ahaz, whose reign commenced 741 B. C. In 293 n. $\mathrm{C}_{4}$, we leara that the Roman gederal Lapirius Cursor set op a sun-dind near the temple of Quirinus, at Rone; and ppon the walls of the still standiag Temple of the Winds at Athens (Fig. 850), may be seen the lines of a dial, dicular pillars or gnomons. But these cone perpencecould only be of service in markior the pe contrivances duriog the bright days of sammer. At nitht, and dur ing the cloudy days of winter, they would be useless Invention, therefore, hal to be further spurred, that more perfict instrument might be produced. The (Tfopsydra (q. v.) would appear to be the machine which wis calleat upan to make up for the shortommings of its progenitor, the sumdial. The Clepsydra, or water-clock, of the Grecks and Romans, was an instrument io which water escaped, as it were, by stealth, in a more or less reg-
nar flow, from one ressel to another. Closely resemniar flow, from one vessel to another. Closely resem-
bling this was the sand-glass, a more accurate instrument, hecause a columan of sind, of a great or moderate height, will run throngh sind of a great or moderate atish, wif rut throngh sura orifice into anether vessel for, no nniform rate of velocity can bo oltained, unle the cylinder containing the water be kept coustantly full. A nother rude form of marking time was the harn ing of graduated candles, a timemeasurer employed by king Alfred. In a general way, all those pieces of mechanisn which have for their motive power a weight or the elastic force of a spring, are called cloclis and watches; but they are also distinmished by certain names, indicative, either of their construction, or of the peculiar offices they are intended to perform. For exumple, - the name timpuice is given to any pirce of
horological machinery which merely marks the time horological machinery which mercly marks the time
without otriking the hours; n clock, besilecs showing the timo, strikes every hour on a bell or spring: a the timo, strikes every hour on a brll or spring: a
quartr-clock strikes the quartere of every hour; in1 astronomical clock is one which indicates sidereal time; a watch is is portable or pocket timepisie; 14 repeater is a Watch provided with a muchatical contrivance, ly merans of which it can be nade, ut any time, to repeat the hours; a chronumater is a wateh of the most superion chatracter, or one that may be used for astrinonvical or maritine purposes. It isnlmost an impossibility to atater
who was the individunl that invented cither n clock or Who was the infividum that invented cither a clock or a witch; anit a great deal of the obscirity attarhing to
the early hintory of clocks is due to the fact that foraserly thotorm horologian was appliod to a sun-tial or
a clock indiscriminately, thereby rendering it a task of the utmost difticulty to state nt what particular period the 1 iuth or the berinoing of the 14th centurg, strikin clocks were knowis in 1taly. In 1285, as we are told by Coke, a stone clock-tower was erected opposite Westminster Hall, mad in it was placed a clock, the cost of which wis defrayed out of a fine of 800 marks impesed ypona corrupt chiel-justice of the Queen's Bebch. About Wyk, or de Wyck, Aet up a clock in the tower of the Wyk, or de Wyck set up a clock io the tower of the
palace of Charles V. of France. This clock (Fig. 1314) palace of Charles V. of France. This clock (Fig. 1314)
was probably the basis of all the priacipal time-keepers in use in the l6th cent. It was very simple; and without entering into any ninute explanation, it may be readily understood, that, as the weight A tents to vocoil the cord and set in motion the cylioder B ronnd its axis, the motion will be successively communicated to the various toothed wheels io
the fignre, a ad fi-dallytothecrowdwheel, or escape-ment-wheel. I; the
tecth of which so tecth of which so
act on the two act on the two
small levers or small levers or
pallets, $i$
$h$, pallets, i $h$, projecting from, and the stispended upright spindle or vertical axis, KM, on which is fixed the regulator or balance, L L. that as alterating or vibratory, instead of a circular, motion of the batance itself is the result. The havds of the clock are
attached to the wheel N , also set Wheel N , also set cylinder B. Now, unless there were some chuck apona some chock upon
the motion, it is manifest that the heary weight a
 woild go rapidly to the ground, cansing the wheels to rotate, the balance to vibrate, and the hands to go ronod with incressing
relocity. In ordar to prevent this ripid relocity. In order to prevent this rapid unwinding of the clack-work, and adjnst it to the more deliberate measurement of time, the lalance is, in De Wick's clock, loaded with two weights, m, m, and the farther these are removed from the axis or epindle, KM, the ment of the levers, and the rapidity of the the escape ment of the levers, and the rapidity of the rytation of
the escapement-wheel, till the clock be bronflt to neither too guick nor too slow. - In a letter written by Ambrosius Camaldulensis to Nicholans of Florence, it is stated that clocks were by no means unconmon io private honses on the continent towards the cluse of the 15 th centery. Reviewiog all the evidence we have hefore us, the conclusion may he drawn that the oame of the inventor of a clock is unknown. that an horological machine driven by a weight is of more anciont date than is commonly allowed; that the clock of lfeury de Wick, which, oo account of its having a laslance fur a regulaand was not the inveution of one the art of horology, a series of inventions ande at different tinue result of ent persons. According to Ferdiund Buthoud the progressiun of the sucresire improvenumts in progression of the successive improvenumts in horalogy
was as follows: 1. Toothed wheel-work was koown in ancient times, and particuharly to Archimedes, whose instrament was providerl with a motive power, but had no requlating or controlling mechanism. 2. The weight applied as a motor had, at first, a fly, most prolablly similar to that of a kitchen-jack. 3. The rntchet-wheel and click for winding up the weight, withont detaching the teeth of the great wheel. 4. The regulation of the fly d-pendiog upon the state of the air, it was ahan-
doned, and a brlance subetituted. doned, and a brlance subetituted. 5. An excapementthe balamce. a more regnlar check thun the fly, with the balance. a more regular check thum the fly, ypun its velocity. 6. The application of udial-plate and hands to indicate the honrs, was a conscquence of the regnlarity introduced into the going part. 7 . The etriking portion, to proclam at a distance, withont the nid of a watcher, the homr that was indicated; and this was followed by the atarm. 8. The reduction and nccoumbolation of all thas luiky machimery to a compact and portahle size, us in watches, - The date at which the aize of clocks whs so far reduced as to retuler them portable, is ancertam; it mast, however, have heen noteriur to $15+t$; for in this latter year the corporation of minetur precladiur all hut ountor clock-makers from conatruct ing elocks or watches, largeck-makers from constructclock or watel could be miulesonall enough to be portatile, without having a "muinspring" sulsotituted for a weight, ns the moving power; and whenever this ohfect was attained, then was the second yernt era in horology renched, ns from this parion may be dated tho applichtion of the fusee, nind the emprginent total alteration in the form and upplicatlon of horvological machlmery. The

HORO
HORR
third sera in clock-work was the application of the pendninm. Galileo was the first who remarked, or ut least the first who formally numounced, in his work on me-
chanics aad motions, which was published in liss, the isochrenal property of oscillating lodies suspeuded ly otrings of the same dength. and it has been pretented that he actually applied a pendulum to a clock for the purposes of observing echpses and determaning longi-
tuiles. There is, however, no aisolute proof of thie fact. Sunctorius, in his Commentary on Avicenna, describes an instrument to which ho had applied u peodusam in 1012. Richard Hurris is sxid to bave constrncted, in 1641, a pendulum clock io London for tho clarch of St Panl, Covent Garden. Vincenzo Galilei, a son of Galileo is stated, on the anthority of tho Academy del C'mmentn to have applied the pendnlam io 1649. It was applieil by Inytens in 16iti; and by llooke, for whom the invention has been claimed, aliout 1670 . But to whomsoever the merit may belong for having first made the application, Huygens is noquestionnbly the first who aceurately explained the theory of the penduluan; and
hence, perhaps, the invention of the peodulnot-clock luas been usnally ascribed to him. Huygens demonstrateil that the vibrations io circular arcs are not indepenslent of the leagth of the are, and that in vriler to ohtain perfect isochronism, the ball of the pendulam isust move in the arc of a cycloid; ankl ingeniously applyiog a property of
the cyckid, of which he was the dixcoverer, namely that the cycloid, of which he was the dixcoverer, namely that
its involute is a corve similar to itself, he procured the requisite motion by causing the pendulim to vibrate betweencyctoidalcheeks about which the upper and flexillie
part of the suspending rod wrapped itaelf in its motion. part of was found that bo prictical adyantage conld be obtained from this beantiful contrivance; and, in fict it was zoon rendered unaecessary by the insention of the anchor escapement, which gives the means of rendering the arcs of vibratiou very smail, io which case insensible. The application of the spiral spring to the bulance is the undoubted invention of Ilooke. Another inve日tion, which marks an epoeh in the histury of of ehanges of temperature on the pendulum rod and balance. The mercurial compensation petmhulnm was invented by Grabun about the year 1i10. Graham likewise suggested the method of effecting the compen-
sation by means of the nnegual expansiong of diffirent sanion by means of the uncqual expansions of anferent Harrison in the censtraction of the gridiron pandulnm, whith is not very generally used. The coompensating apparatus in the watch balance depenils upoo the same principle, but the mechanical arrangement is necessarily very different.-In a general view, borological machines may lee regar ded as consisting of three essential parts:

1. A moving power, which produces a rotary motion 1. A moving power, which prodnces a rotary motion
ahont an axle; 2. A train of wheel-work, ly means of rhont an axle; 2. A train of whees-work, reguired ratio to that of the primary axle: 3. A regulatur, by which firmity of motion produced. The moring power is cravityor a spring whith is colled up within a barrel and unwinds jtself by the force of its elasticity; flye first is preferred on acconnt of the perfect regularity of its the second is pecessary for pocket timepieces and those which cannot be kn'pt in a fixed position, sts on ship-
hoard. The train of wheel-work is chiefly remarkable board. The train of wheel-work is chiefly remarkable
on acconat of the deficacy and accuracy of its construc on reconat of the delicacy and accuracy of its construe-
tion. The regalator is either a pendnlum, of which, by the theory of falling hodies, the oscillations are isoch ronal or performed in equal terms, or a heavy banace of the varions mechaoical contrivances introdaced int borological machines far acomplishing particular purposes, it wionld he nseless to attempt a description io this place, as onr limits will not permit them to be given with that minnteniss of detail which is imbispensable in order to convey a clear idea of their action. The mast important is the escapemst (or scaymencht, or thenetion is cooverted into a reciprocatiog motion, a ad gives impetus to the pendulnm or balance. Some other parts are also of primary importance: as the maintabning maintained, or the machime kept coing while the weight or spring is buing wonnd up: the fusee, by which io watches iod sprint-clocks the force acting on the wheulwork is reudered equal in all states of the tension of the apring. The geoeral arrangement of the wheel-work ing description. Fig. 1315 represents the movement of commoo vertical watch, the frame plates loing omitted and the dial being supposed to be turned downwaris.

foot. Although, however, the Equidiz possess but one developed toe, there are oa each side of the metacarpus and metatarsns joints two small rudimentary processes which represent lateral toes. The system of the dentifiom of

Iacisors $\frac{6}{6}$, canives, $\frac{1-1}{1-1}$, molars $\frac{7-7}{6-6}$; total 42. Of the three great divisions into which the Equide are eeparated, - namply, the horse, the ass, the zebra, - the former is the largest, the most docile. the most variaso of and, finally, more fully distributed over the horse ex the globe, than any of the others. The plow, the researches of geologist afforl the most satisfactury evidence; for there is not portion of Europe, Asia, Africa, or America, in which the fossil remains of this snimal have not been discovered, mingled with the hones of the elephant, the hippopotamus, and the deer, as well as the mastodon, and other abimals which have passed awny from the surface of the earth. In most cases these fossile sgree with the eize of the horse which exists in the present day; but io South America the bones of horses of gigantic size have been exhumed. The first allusion to where it is said that Analh, son of Zibeon, fuund the where it is said that Anah, son of the horse-in the
nules - the progeay of the ass nod the mules-the progeoy of the ass nod the horse-in the
wilderness, as be fed the asses of his father. From the remaius of Grecian art and writings, we find, atso, that the horse was used for chariot-racea, and other purand more employed for the nscof man. It is questionable whether, in the preeent day, there exist any real wild horses, as those which are so called have been proved, in the case of America, to have been the descendants of horses let loose by the Spaniards ; and those of Asia are lint the progeny of horses which have escaped from the hannts of civilization- Both fore and hind legs of the horse have, on the inner side, ao ora, horny, wriakled plate, called a wart, sallender, The canine teeth are wantiog in mares. The sens of The canine teeth are wantiog in maces. Tbe sease of ouch, in genern, is axtremely aper lip capable of elongation and considerouft; the upper lip capable of elongation and considerdeveloped and very acute. The eyes are large, and the sight capable of distanguishing oljects at night ; while the sense of smell is sofine, that horses which run in a wild state are said to be athe to scent their enemies at the distance of more than a leagne. The skin is generally covered with a coat of short hair, smootlt in Bummer, and becoming rongh and much more elongated during the winter season. The best of the wild Asiatic horses are those which inhabit the northert sloped of the monntains of the Cancasus. The principal Varieties of these, according to Pallas, are, - first, the
"moustachioed" horse, characterized by numerous "moustachioed horse, chatracterizat, the "woolly strong bristles on the upper lip; next, the "woolly
horse," a Russian variety, covered with a crisp wolly hair, nud common among the Baschkirs; thirdly, a "naked" or hairiess horse, which is found among the valleys of Tartary, by the natives of which it is kipt always clothedt and, lastly, a varity delincated by Johnston, in which a sort of woolly mane is conthe tied which specimen Pallas asserts that he fiow tumong tho Buracti. The wild horses appear to be free from nearly ail those diseases and ills which prove anch a bardea to the domestic breed. They are generally of a pale or graimonale, which subsides into a black color about the month. They aro less in eize that the domestic horsm, and have a larger head, larger ears, hoofo more contiacted, and the mane mure erect, while the tail is nuch shorter. They do not wander beyond the 50th degree of north hatitnde. They gencraly move abomt ill droves, headeal hy a large gray or hark stallion, who constitutes himeolf the leader. On the Pampas of South America they are excuedingly abondmat, and the fina hiss, a sent-civilizad race of men. live annong theth Their mode of capturing and breakingtin thense hors is very curious. The copifas. or to the cor al fa larise powerful stcady horsi, rides into the cors at a large pace incloscd hy an ingorgmald lorses are driven by the Intians), and, pleking out the animal to he brokens is, throws his lasen over his hema, and drugs him th the gite. Forsutne fow moments the ithes in the horse in ith onwillingness to lone hir companions, hit when once ver the plains: lint a timely choetk of the lawsenstop him. The peons then runsifter him, and throw a laves
ground. In an instant a Guacho eeata himself on his head, and cnts off the whole of his mane, while another cuts the hair from the end of the tail, io order to show that the animal has once been nounted. Thit, und putra plece of bide ia his month to servercho who is to mount him next arranges his spurs, which sre unusu ally long and sharp, and white the two peons hold down the horse, he girths on the sad the other men giving then jumps inco the sadile, arasps the balter and pre the horee hastion. At first the auimal jumps about, sume pares for action. At first the amman the ground at once hut the enpurs of the Guacho soon set him goiog, sad off be gallups, doing everything be possibly can to unseat his rider. Atter gallopiag him about, and floggiog him nutil every hit of spirit seems taken out of him, the Guacho rides back slowly to the corral, and the horse so lately vuruly, is quite tamed, and fit tor domestic use. Immense quantities of the skia of the horse are exported annually from south America. Tho Lorse mataraly a herborse mouth aod sharpincisor teeth fre well fitted for seizing and cropping various epecie of grass, In a domesticated state, however, he is obliged to est other and harder food, as oats and corn; and for this ather ausion is made by nature, who suppliee him with a peculiar adaptation of the bones of the face, by means of which the horse can comminute and grind down his food better than carnivorous ammate. As the teeth of a horse indicate his age, as well as being dis tiugnished for their adaptation or masticating purpose it will be necessary to mily thom some slight consit ion. The colt is generally dropped with the first and econd molar and grioding teeth apparent. Whea eip days old, the fwo in the next five or six weekshe has the these teeth will th supplim, and a third minder appears and after the colt bas attained his eighth month, the third nipper

-The natoral paces of the horse may be thens enwmerated in their proper order:- the walk, the trot, the pallop, the canter; and perhaps leaping may alao bo included as it is untoulitedty a pace belonging to the horse, as tu
other saltatory animals. First, with reference to the walk, it is consilerell, when slow, to be the simplest of all paces; bnt when acceleratel, even in the shightest degree, it is not so simple as imagined, for it is oftetintermixed with motions appertaining to other paces, hy a succersinnal diaplacement of the limbs, ont of that
more common conrse. 1t is stated ly a writer in Blaine's more common conrse. 1t is stated ly a writer in Blaine's description of this mode of progression adupted by the hurse, that he ferna that, sopposing the the pear eg e one, bint the off hind-leg seemed not to folluw the forislers at the sime time as before, i.e. that was in the walk of the pace which he had heen previously noticiog but this wis nothing more than the alteration of the form of the loody, whea either the one walk or the othe took place. For when the off hind-leg began. it was ucceeded by the off fore being lifted up, and when the off himileg was sut down, the near hind-leg was lifted ap. But the off fore and the near hiod-lers seemed s comected torether hy the poise being on the same side that it was the near hind-lpg which appearnd to hegin the action. The poise boing wltered by the will of the couled ty the off hind-fant heing net down at the sume tiane after it, as in the walk of the juwe. The near himileg is in both paces (i,e. the cotmmon walk and the puc inc walk) taken up after the off husi fout is set clown, is taken ap, to make romm fir the nar himi-font to ha ant down. In order to renler the walk arreablle to the
rider, it sbould be true: that is, it should bo conducted
by fa harmonione and aymatrical clavation and deprowsoin or setting than of the fert. To walk tant requirew great hinerty in the angles of the limbs, bit partiof the shoulders; a corresponding lengith nind angularity in the hind legs is niso regaisite for the pertection of the pace. In the langunge of Blaine, the walk
 artiticial calunee of the manegr, athl that whether it is quick or shaw, each foot bemb gronmi, nill not, ne to too often the chase, the toe bomp will have much intluence on his methed of walhing: the angles of his limite will have much more: and not a little will tepend on the hand of the riler. One lorseman liy seat und hund will fure the horee to carry his hand in the right gifues, and to evevate and extent hir tines, the uno in umson wath the other; rud another ruter, hy his bail seat mat centroe hath, will hriag has horse to nobly short and irregularly, und thus su mix the trot with the watk ar to do hittle nove thath slonthe oser the ground. The miles fill lour. There are few unimats, huweser, that Ther accomplishal thas, Hul cansequently, five maksper hour is a good rate of epeced tor a fast walker. The trot in the next puee nfter the walk, nul it is always performend dingonally, the limis beins differently employed, necording to the rate of jrogression, whether faxt or slow. There are thare varieties of the tret; mamely, the boolerate, the uxtented, and the running trot. In tho moderate, or slow trot, the dugonal hege (as the off foreand noar hiad-legs the elevated, nid rephaced on the ground together; while the twather lego remoin on the grotind to support tho weight or the horse and his ruber. pearly idenstical in their manner of emplogime motiso power as the fore and hud dimanal lego wetiog in unisou furm themselves into a sole support, like the single leg of a mau; the ouly difterenco being that the centre of motion is placel diakomally across it ; by which meatia the superincumbent weiglt, utthough muving on two distinct members, prodnces but one effect. The space of ground nsunlly gone over at each change of the mang ande in the fist trot ie a sumberent pronf that nspriage an in the uetion, whel moment in the pace, completely from the particular motnent in the pace, completely from thaty Is jropelied through a spate correnpowding in rawine the force emplosma is ofteo trot, from a very erroneons jmpresmion that the methen of procedare is identical; really, thes pace is a compount of the trae trot and the " amble," sud it in not conducted diagotally, as the other varieties are. With regard to the grollop, it is stated hy Blaine that it may be properly divided into three varieties, ull effected, however, ly y propulsive effort of the himd-quarterz. Of gatlops ther are, - the racing, or gallop at full kpoul; the slow, of hand-gallop: and the canter; which latter, althongh treated as a suparate pace of the horse, is really but a slow ganop. gallop, is nothing nore han a succession or caps. simont the intervention of the olower gallop, in which ono of tho hinder lers is first udvancert to estillishly a new centre, for it wonld require too great an effort to raiso the fore parts at once from a state of rest ly means of the loins, and to throw them forward at the first action to a considerable distance by matne of the latanches nud thighs. "In the extemided gallop, the iore parts when raised are forced forwarde by the miteraate flexions and extensions of the angles of the hinder parts, and as both of the fore and both of the hinil leas, in the racing gallop, becone opposed to the krina in shccession at the ground together and then the two hind, oo it is evideut ground thagether and then the two hind, 80 it is evident repetition of Jeaps. Quickly us these leaps are repented, repetition or leaps. Quickly as these leaps are repented yet the eurface of groond passed over at each of
must necessarily be great to mecomplish the pace at which tho good racer goes. Hambletoman, in his match agrinst Diamond, is sinil to havo covered $831 / 2$ feet of gronnd in a secont: and by the catenhtions of Nomes. St. Bel, Eclipse covered 85 feet of ground in the same time when at tho top of his speot. "(Blaine.) The handgallop is a pace betweed the umble and the racing thas pertirnul dian perrorna dabil contracted equally, ono genacally takiog the lead as it wers, of the other, and beling pushed the thead, asward, while the other is more curved. The
furt canter differs from the gallep in consimatince of the novemants of the legs, instead of being simultanenus, being dirmitly the reverse. At no period of time is the atimal wholly in the air, one of his lugs being always tonching the Eround; and this it it that kives the pare its pecular efrect. Wheu it is performed, sity, on the right, the horse commences hy first placing his off hindleg it little beyond the other; at nearly the same in-fore-len on the sromb when the uff doubling over and leyond, is placed in an instant after it. In the next movemunt, the hind-legs are thirowa in, nod, while elevated, the off formeleg is uever clevated until the hinder ones are replaced un terra-firma. In order to insure the saffety of progression of the horme, the Parthinns used t, plice pieces of chalk and atones in the pathe of their young harses, sin as to accistom them to look to their
stens, mul to clevate their frot sulficiently; while the Rumans tied closis to the pasturns of their colts for $n$ Rumilas thed clats the pratorns of thear colts for M
onnilar purpose. As leaping will be treated of in the

## HORS

article Hunting，enough bas now been said with refer－ ence to the natural paces of the horse．It wonld be im－ possible to fiad out who was the first horsemas；but aotipuity，men were that evea in the remotest ages of cansiug them to career along with that irresistible speed and endurance with wbich the genus Equide are so highly gifted．Grood horsemanship seems more in－ countries in Europe，and it has alwaye beets considered as one of the corporeal accomplishmeuts of a pentlemun There is a great differeoce between a regimental riding and that of a gequine sportsman，as the following dis finction，taken from an article in the Encyclopsedio Britannica，will show：＂The militity seat appranches bearar than any other to that of the maneqe；and，by reason of the horse－soldier baving，in georral，but one band to hold bis liridle with，is one which gives hiru great command over hif horse，without disturbiog his seat．He sits well down in his saddle，or his fork，or wist，with his body ereet，and in perfect eqnilibrinm with s firm presure of the stretched down the sides， komes and thighs，and tho feet firm in the stirrups．But it is not by sny one of these aids that he becomes a good horseman．He mast be in perfect unison，as it were， and gracefnl seat；and in proportion to the just balance of his body will he be alle to have a steady hand， point of vast importance to the dragoon．The impor－ tance of this balance，nnd keeping hiosself in a proper equilibrium with his horse，is increased by the fact of his not being allowed to rise to the horse＇s trot，and To quute niother authority：＂The man who rides with the aid of the proper equilibriuns，＂says Colonel Puters， etrength he has retained with a steady．linht apply the govern every motiun necording as be finds it necensary for his purpose；play light with his own weicht upon the sadule（by a gentle spring in the instep of both feet on the stirrups），with ap easy pressure of both thighs knees，and calves of the legs．Whea the horse jumps or planges，then these aids arealso requisite to keep the seat；but in sh easy，steady pacs forward，it is most particnlarly to be pointed ont to a young min，and can－ aot be too often repented，that to become an easy，ele－ gant，or proper horseman，he must learn to ride with comfortad pleastre to his borse as well as to himself to keep the tody with a slight from his hip upwards， from the perpendicular，and balance himself thus frad ually on his horse in all the different paces thus grad－ course，cannot be expected all at once．A man that course，cannot be expected all at once，A man that and hands，although he rides his distance in the same period of time that the good rider would，yet he canoot in the proper equilibrimm；tut the man who rides his horse with it light，steady hand，and elastic body（which when disturbed even，has the power of restoring itself to its former seat），in unison with the horse＇s action， May be truly said to ride in the proper equilibrium． Mlousting is the first step in horsemanship；aud a cur－ pertainiug to is neopsary lo this，as in everything noimal by walking np to him on the left side not directly in front，as this might alarm him and make him strike out．The rider is recommended by old writers on the autject to take the reins and the pummel of the saddle o his left hand，after having placed his left foot firmly in the stirrup，and by laying his right hand fat on the hioder part of the saldle，to vaalt into his seat．When monuted，the first thing to set about is the proper ad－
justment of the reins．If the horse is to be ridden with justment of the reins．If the horse is to be ritlden with a single－bridis rein，the reins must be drawn with the
rider＇s right hand through his left，until the horses month lias baen placed equally on both sides，and the the left hand mnet separats the two reins，With dupblerein brill the same must lie done．＂The lridte－reins should we the at a convenient length；for，if short，thuy will discom puse the attitude of the body，by puling the left shons der forward；and they should be held with a firm crasp divitling them，as before mentioned，with the little finger． When a horse pulls at his rider，he shonld alrance his arns a little，hut not the shoulder．towards the horses heard，of thie palmi rather than the brenser，hand the lower part of the palme rather than the upper；hut he shonld not shorten the rein in his hand if he can command his horse without it，or lie maty lose the proper uppui，of
bearing of his mouth．Oll writers reconmend the bri－ dle－hand to be held perpenticululy，the thamb beint in favor of the konckles being uppermost．The per－ pendicular hand may to vary well in the selagol，or with the severe bit of the highly－drilled ilrugoon－horse；but nu man conlal ride a free－going mee－horno over a conrse or a hasty hunter over a country in that form．＂After due attention has been pail to the holding of the bridle the reat must be the next condideration of the loartiel A grat improvement has been male in this respect．ly nes which were formorly in togne．With slunt stirmp enthres the rider＇s seat is thrown lark in the sumble quently，hls weight in thrown on the laoneres loine，the quently，his weight is thrown on the harne＇s loins，th
weakent pirt in the lafly of the animal．The thighs nri the inost owsuntial parts of a horseman，in giving him good，firm suat，und on their form will depend the pun
tiou of the kwees，also important to tho wequisition of
a firm seat．The thighs should touch the saddle snd the sides of the borse with their inner sinrface chefiy，and toes Ghould be tors should not protrnde to and ard．for the toes being turued in，necessarily cramus the knees， and prevents the animal from exerting his strength． The manner in which the foot is placed in the stirrup varies considerably with different riders．＂The soldier always，the rider for pleasure or on the road generally， ests on the ball the loot，with a gentle play of the jostep；but the man who rides after hounds，and the jockey when he rides a race，find it necessary to have little npward，as well a situp，with the toes turned tages of ill this are twofold．First it pives them more power over their horses，by furnishing them with more substantial fulcrom ；and，secondly，to the man fllowing hounds，it is a great security against the foot being chocked out of the stirrup，by the seat being dis－ farlerd in a leap，or from any of those catused which per－ patually occur in crossing a country．＂As an easy seat

## Fig．132

（Fig．J32I）is most important to persons who are obliged， whether by necessity or pleasure，to ride many hours in succession on the road，the following rules should be should，in the first place，sit well dowe io ：The ride of the saddle，with jost that length of stirrup－leather will admit of the fork clearing the pommel of the sadlle The body of the rider shonld also incline forwat in the trot，as he thus furnishes a proper counter－halance to the movements of the horse；and，alrove all things， a steady seat must he maintiged，as，unless such is the case，the latter will be incommoded in his，rice and dis－ tressed beyond measure．（See Hevinis．）－Nothing thats off the appearance of a horse and his rider more tribute a good sadde and bridie；nor does anything con－ a wibute more to the commort snd safety of the latter than weli－mada roomy sadde，with spring－bare for the stir－ sufficiently large for the feet．＂ Horve＇－marten，$n$ ．（Zö̈t） to the genus Bonbus．－See A Pins large bee，belonging Horse＇－meat，$n$ ．Fodder fur horses

In Greece, the dwelliog was eatered from the street thronub a passaze, on either side of which were stables and offices. It whs geterally two stories in heigbt, the woateo occupying the upter rooms, and the men those on the ground-flowr. Ou this floor harge chambers were ino tormed, one of which served as a work-roon tor the feuale part of the house-
huld, and the other as a common dining-ball. Reund hold, and the other as a common diming-ball. Reund
this ball, and opeoing into it, were upartments which wire devoted to the accommodation of gneals and the Romans is descrilied under Hocor Rovises The methed of construction adopted by the Greelis and Romatis, the muin feature of which was a central court with chambers opening into it on every sitle, was followed, with a few modifications, in all European comutries during the Middle Ases. Entrance into an inner quadrangle was afforded by a large arched gateway in one of the siles: the pariors, hitchens, and living-rooms being placed round this square
rourt on the ground floor, and the slecpints-roms on rourt on the ground fllor, and the sleepiay-roms on the flsor above, all opening into a cloister, ur gallery. In the housts of the medizval period, the walls of the to the innates auninst soual foes. The shop and storeroome roblers and perthe stables of the owver of the honse, were to te found on this floor. 'The principal apartments were sitnated on the flow immediately above, to which accues was gained by a amall wioding staircase, lighted ly narrow windows in the wall, which conld be defended by a single resolute swordsman against a score of hubtile visitants. In France, Scotland, and Belgimm, the houses Were onen oiany stories in height, and of great size. The roots were bigh and step, ond a picturesque charocter wha givea to many of thesc old mindings by tho praked gables, which were often richly adorned liy in medinval humses wis the prejuction of one thor over that which was immediately brejow it so that in orer in which the bonses were of considerable heighte the upper storice of the buildione on either side were only a fow feet apart. There were no ceilings; the flours were generally dirty, even in hunses that were occupied by the nobility and the higher classes; and the roums were dark, the light being admitted through
piects of horn, or snall diamondtehaped panes of ill pieces of horn, or small dinmond-shaped panes of inmade glass, defective in trimspmrency, nd coumonly
of a greenish hue. Although the hoises of Italy, flolof a greenish hue. Although the honses of Italy, flol-
land, Belgium, Flanders, and France, that were hinity land, Belkium, Fianders, and France, that were himily
duriug the 12th and 13th centuries, are frequently during the 12 th and 13 th centurics, are frequenty
manked ty great architertural beauty exteraally, yet little improvenent was made in domestic architecturo in England, especinlly in the interior arrangementa, until the reign of Elizibeth, when the arclitects of tho day began to conztruct dwelling-housed with some regard to the locality iu which they were situated, and the parpuses for which they were specinily roquired, and also in accordance with the tastes, hatits, nud pur snits of the persons for whom they were erevtel. The houses of the 1xth centary, consisting chiefly of hargo square piles of red brick, pierced with numpuns win-
dows in front and at the lack, with a porch over the entrance, sud a heavy slatell roof projecting beyond the face of the walls, and suppurted hy it bold hat simple and urnate in spurauce lupt those of the pictansy as exemplified in our principal cities, as New York, Pluiladelphiin, Buston, Baltinoore, Clicagn, Cucinati, New Orleans. de., combine external elegnance of struc ture with judicionsly contrived internat arrangement that tend to the comfort nimb convenience of the arcupants in every respect. Practical details refbecting lonse-hailding nad matters in inmediate enmbertion with it, ar
work, \&c.

Greeks being only able to maintain a gnerrilla warfare. Greeks being only able to maintain a guerrilla warfare In 1826 he accoupauied an expedition to Crete, and washut up for sotue time in the fortress of Grabura, from the engigements of the Piraus, Oyopo $\mathbf{V}^{2}$, subsequently placed by Mavrocordito at the head of the surgical staft, with the title of Archichrrangus. Famin now threatencd the Greeks, and Dr. H. returned to his own conntry toprocnes surplies which would avert this calamity. These were liberally given by the U, state people, and $I I$. re-enlarked fir Greece, followed by other vessels carrying material of war and volmuteers This help in thuir darkest huur bas never heenforgotten lis the Greek people. Dr. II. superintended in person the distribution of these supplies in varions parts of the country. Afterwards he whtainel a tract of land from the Greek govt., and established on the inthmins of Curinthat chlony nade up of Grevk refngeess, driven frow her independeoce was secmred. Tho Greek govt. be stowed upon him the order of St. Sanvenr. Alter visiting switzerland, $H$. was in Iraris during the revolition Fayete ncruse the barriculent strects to take powserssion of the llotel-de-ville, nnd pitt himself nt the hivad of the studies in Paris, Dr. II. retnrned lame in 1832. Becoming intervested in the condition of the hlind, he off.red to urganize and put in opraration a halatation for their special instruction, a charter for which had alrealy been ohtainel, but mo begioning male. After certain pre-
liminaries he went to Europe to olitain teachers, ulso to carry enlphurs whicht bad bern raised here for the Poles, then in insurrection. While in larin huw was mado Presslent of the Polishl Revolutionary Committece, nay Pressient of the critical aurrice (in which several had failed) of carrying supplies to the lalish corps diarmée which had crussed the 1rrusian frontier, hut refaserf to lay down their arms. He succerded in this; but was arrested and thewn into primun ty the Prowsimu guw.
Afterabriof detention, his. jiluration was effected toy the U. States nuthoritife. Restmrning to Mans, he ressumed
 diozen blind chiblren into hiv finther's homee, and thas Forming the germ of tho Masachenerts Instigution fir since heen the director. IIin latore huse herame known thronghut the civilizull wurth, throngh his succerss in mam, a blind deaf mate, the first purson of that class
known to have acquired the fres use of words. Equal success crowned his effints to teach other bliod deaf mates. Dr. M1. 80 modified and improved the existiog mode of printing for the Llind as to make it really
available and nsetul. ITs method was pronounced the available and usetul. Mrs method was pronounced the
best ly the elaivorate opeort of the jury of the British Great Exhilino in 1551 and he receivela another at the Art Exhibition of Paris in 186T. Partly ${ }^{\text {no }}$ purhurs wedgment of services to hum . Wh. of Prussia sent him a costly gold medal. When the Cretan recult broke out, Dr. $1 f$. appealed to the sympathies of his conntrymen in lechalf of those iwanders. $\mathrm{A}_{\mathrm{syst}} \mathrm{m}$ mar visited Greece after an inturral of 40 years, as the almoner of $A$ merica, and, as lefore he carefully superintended in pernon the thistribntion of the sulphies, Dr. 7. Was the first persun in this coupery who demon-
strated the ellucability of idiots by systematically trainstrated the edncatility of idiots by systematically train-
ing several blind idiotic children. IIe snbsequently oring keverd blind idiotic children. He snbsequently or-
ganized the first public institution for the training of ganized the first public insitntion for the traing of
this cl:yss of unfortunates. IIe lahored during 20 yenrs to introduce articulate speech into the edncation of deaf-mutcs. Tbe recent alloption of this measure nnder the sanction of the commonwealth is principally due to hiis exertions in its hehalf. n. 1876.

IInm'boldit, Frigheich IIeinatch Alexander von, the greatest naturalist of his time, B. at Berlin, 1769 , the same year that gave birth to Napoleon, the Duke of
Wellington, and many other distinguished persons. Ie Wellington, and many other distingoished persons. He
was edmeated at Frankfort-on-the-Oder, Götiogen, at Was edmeated at Frankfort-on-the-Oder, Gobtiogen, at
llamburg, and at the mining school of Freiberg. From Ilamburg, and at the mising school of Freiberg. From the earliest period he evinced a faculty for physical in chiry, which he assidnonsly cultivated loy the stady of chemistry, botany, geology, ind galvanism. At Gottingea he becaus acymiabted with George Forster, to the earliest excitement of his desire to visit the tropics, and io company with whom he made his first tour. In 1790 he accompanied Forster in a tour through the Rbine districts and Holland, and afterwards visited Eagland with him. IIs scientific observations made in Germanty were afterwards published ia 1790, under the Fitle of Mineralogical Considerations on Certain Basaltic Formations on the Rhime. His intention being to seek employment in the civil survice of tha Prussian kingdon, he subsequently went to Hamburg to stady hookkeeping and the otber forms of eommercial knowledge, eminent Werner, at Freiberg. In 1742 he obtained the post of mining superintendent in the works of Bayrenth in which sitnation he remained till the year 1795 , during which time he wrote many scientific articles for the German periodicals, and published a botanical work in

Fig. 1328. -alexander von humboldt.
Latin, called Specimens of the Flora of Freiberg. Soon after the prodnction of this work he resigned his post is mining superintendeat, haviog determined to explore those parts of the world which had been unvixited by
travellers. "I had from my earlicst yoult," travellers. "I had, from my earliest youth," he says,
"felt a boruing desirs to trivel in distant lands pnex"flored by Europeans." The disturbed state of the plored by Europeans." The disturbed state of the
continent at the time, owing to the wars consequent on cotitinent at the time, owing to the wars consequent on
the French revolotion, prevented him from expcuting his design for abont two years, during which time he resided at Jena, and became acquainted with Gibthe and Schiller, and occupied himself with the composition and publication of Invistigations on the Muscles and Nervefibres, with Conjectures on the Chemical Pracess of Life,
and On Subterraneut Gases, - two small works which established his reputation as a natural philosopher. A short visit to Italy was made in 1799 , and in the bane year he went to Paris, with the view of accompanying the expedition about to be dispatched from tbat eity to Egypt. The expedition was abandonel; but Hamholdt made the nçbaitatance of Bonplaad, who was to have been the naturalist of the journey, and the two oarned wen resolved to undertake a great enterprise rica: but, being prevented by the Enplore Northern Afthe Mediterranean they landed in subish crmissrs in permission from the govermment to travel in the Spurd ish posseasions of soluth America. In the manth of May, 1793, the two travellets embarked at Coruman and, eluding 2he English eruisura watching the port, reached Teneriffi, where they asompled the peak ithd collected some valualile scientific datia. Going on loomrd their vessel afain, they sailed for Comana, in South Amarica, which was reached in July. Inmineldt and American continup proceeded to explore the grent Sunth Americall continenf, and to collect a body of scientific initherte unparallelet. For 65 days he navigatiod, in an Judan catnce, the Orinow, the Rio Nugra, and the Atahapo, dixcuvering the connection Netween and the Atreo and the Amazom. The connection betweell the Orithe physical wapects of the cunntrv, und the labits of the natives, werg all ohscrved and noted doriug this great jourdey. Hus now returned to the coast sud ctmonrkel for liavinn, where los acjourned for some time.
Itetprning to Sonth Amurica in 1801 bo travelleil Jtetorning to Sonth Anourica in 1801 , ho travolled
sonthward till he rosched Lima, crosming the Cordil. sonthward till he runched Lima, crowning the Cordil-
leras and Andes five times huring the journey. In Jane, 1802, he arceniled Chamburazo to an devntion of 19,300 fect, the highest point of tho monntain everattuined lyy a buman being. In Weconber, Inor, he embarked for Onaynguil, nol in the April following reached Mexico, a yeqr. Wishing to completo hif sefientitic onservations of the island of Cnlm, ho onee mors set sail for Havana,

Washington and Philadelphia sncceeded, after which he quitted America for France, mad arrived at Burdeanx in his notes, wid assistiog Gay-Lussac in matking some ex periments relative to the chemical composition of the ataiosphere. After,spendiug a short tinne in Italy and at Berlin, where he obtained permission from the king to take up his residence in the French capital while his
works were Leing printed, he returned to Paris. Io works were Leing printed, he returned to Paris. Io 150. appeared the first of a large number of volumes boled and Bonpland in the Interior of Travela of Humthe years 1799-1804. In this naggnificent nudertaking composed partly in Latia, partly in Frencb, he was as sisted by Oetmans for the Astrooumical, Arago and GayLussac for the chemical and meteorological, Cuvier for the zoological, and Klaproth for the mineralogical divisfons. It was mainly divided finto six great sections which agaio were sululivided into many more, the bo tanical portion alooe consistiny of twenty vohumes embellished with 1.200 plates. Ife spent a portion of
tha years I $827-28$ at Berlin, whither he had bewn in the yeurs $1827-28$ at Berlin, whither he had been in-
vited by the king of Prossia; io $1 \times 29$ lie, at the express vited by the king of Prossia; in 1829 lie, at the express
desire, and at the sole expenst, of the emperor Nicluolus set ont with Rose and Ehrenberg to explore the eastas, provinces of Rossia, and in nige montis travelled, be distance of Stersburg aod the Chinese frontier, over this expedition were publishal hylin at resairs of under the title of, Central Asia; Researches on its Moun tuin-choins and Climatolngy. Between the years 1830 and 1848, altheugh he desired to keep alouf trom poli tics, he was intrusted by the kiag of Prussia with bev eral diphonatic missions to the conrt of lonis Phalippe. In 1848 he went to reside near the king of Prusbia, Whose court he ornamented till his death. In $18 t 5$ he
coommenced his great work Kosmos, or a Physical De scription of the Universr, which was concluded in 1851 nud which has becume exceedingly popular in an Eng lish translation, He was a member of almost ever scientific body in the world; an associate of the Acad with many orders, aud was a grand officer was decorated Legion of Ilonor. By the labors of his long aod valn able life he earned the title of creator of thestionce of comparative geography, and reviver of the study of the natural sciences. In addition to those already quoted a few of his most important works may lie given Essoy on the Chemicrl Analysis of the Atmosphere; Pic tures of Nature; Essay m Emectrical Fishes; Essizy an
the Gengrophy if Plants: Causes of the Dit the Geagrophy of Plants; Causes of the Difference in
Temperature of various portinns of the Eurth's Sarfuce; Temperature of various portinns of the Earth's Sarface;
Fragnents of Asiatic Geatogy and Climatology; and The Progress of Nautical Astronomy during the Aif-
teenth and Sixteenth Centaries. D. 1859 . The best teenth and Sizteenth Centaries. D. 1859. The best biography of this great man is that of Prof. Karl Brubns
( 3 vols., 8vo, leipsic, 1872 ) excellently translated ion English by the Misses Lassell (2 vols., 8vo, London, 1872 ). Humbolift, Cael Wilhelm, Baron von, a distin guished phlologist, classical critic, nod diplomatist, was elder brother of the above; with whom he pursned as edacational career at the ndiversities of Göttingen amd Jean. Whea very young, be wrote many essayd on the Greek poets end philosophers; but his first work of consnquacoce was a critical essny on Güthe's " Hermann and Dorothea." In 1802 he was nominated to the post of minister plenipotentiary to Rome ; resigning this in struction, whiche head of the department of pablic iostruction, which he quitted to retire ioto prinate life,
two years afterwards. In 1812 he becane J'ussin bassador at the conrt of Yiepua. represented lian amtry at the conforence of Prague, ia 1813; ins connwith Hardenberg, the treaty of Paris. In 1819 signed, recatled from Eagland, where he was amlassador, to Berlin, to asmame the functions of minister and firivy councillor; but not agreeing with his suvereign as to his retrograde policy, he tendered his resignation, and once more songht a retired life. He now occupied himself with the stndy of classical and semi-civilized lantuages and comparative gramar, varyimg these pursuise with critical essnys on poetry, philosophy, and the hine arts. He pulisished a small numbur of poetus, but, on the anthorship for whe homatoned creative for critica anthorship, for which his mind was move fitted. 11 edition of Ilomer's "Odyssey;" petry, and on Wiolf nation of the Busque Lungmage, and a treatise on thi Celts and Iberians; besiding a very a treatise on the smaller works on classical fiterature und on sprenlative physiology. The latter yous of his lifo were oecnpiel with the stady of the Malay and American lanemated ont failing health caused him to almandon the American Waluy that ho might conelude his reserarches in the Malay tonguo. At the time of his death he hat almos completed his takk, and his work was aflerwards pab-

-n. (Geng.) A native of Hungary.
Hun'gary. [Ger, Ungarn; Magyar, Orszap.] An extitle of kingdom, a considerathrope, forming, uader the title of kingdom, a consideratlle portion of the Anstrian
dominions; Lat. from $\$ 6^{\circ}$ to $49^{\circ} 34^{\prime} \mathrm{N}$., Lon. $16^{\circ}$ to $25^{\circ}$ $3^{\prime} \mathrm{E}$. It is hounded W. by part of Germany, N. by Ga licia, E. by Moldavia and Wallachia, nud S. by Turkey Area, $124,438 \mathrm{sq}$. mo. Divisions. Hungary proper, Croa-
tia and Slavonia, Transylvania, aad the Town of Fiume (see Austria); and these are again subdivided into five districts, respectively named after their capital cities, Pesth, Presburg, Olenburg. Kaschan. and Grosswardein. H., in its chef parts, forms a harge basin, $8 \mathrm{nr}-$
ronnded almost entirely by roountain-ranges. The Carpathians, an immense mountain-chain beginaing near Presborg, divide it from Galicia. They rise to the height in some peaks of nearly 10,000 feet, and form at the top immense masses of granite, totally destitnte of vegetation. (See Cabparhians.) Besides these, there
are in the N. and W. several detached ranges of very considerable exteat. Immense plainsalso exist. Rivers The Danube, Szamos, March, Maros, Drave, and Save;
the Carpathisus pour down into the plain the Theles, Waag, Gran, Poprad, nad Temes, all falling into the Waag, Gran, Poprad, had Temes, all falling into the anil there is a large tract of marshes, the principal of Franzens Canal and the B-ja Canal, buth joining the Dannue and Theiss. Climate. Among the monntaine cold is predominant, the snow lying on the ground for many panths. In the S., the clinate is in general mill, in the sandy districts extromely but; but on the banks of the rivers, and near the marshes, damp; dampaess, indeed, being a prevailing characteristic of
the climate of the level part of Hogary. Min. Important, consisting of silver, lead, coppar, iron, zinc, found in the samil of rivers, and is principally washed by the gipsies. Precious stones of varions kinds, opals being the most valuable, are discovered iuthe motntains. Prod. The extensive plains lying along the great rivers $\mathrm{N}_{\mathrm{t}}$, clay, stone, and gravel predominate, and the ground there protuces but a seanty return, after considerable labor. In the 8 ., too, there are many tract unfit for the purpases of agriculture. The larys haths of Dubreczin and Keeskemet are covered either with sand or with the most scanty vegetation. Sover,al other
tracts are covered by moving sands, which are said in tructs are covered by movitg sands, which are said in mon rye ars most frequently sowa; in the 8 . what, Oats are cultivated throughout the kingdom. Potatoes are raised by the Slavonians and Germans, and pulso by the followers of the Greek Chareh. Herap and firx are cultivated, atso twatcco and safficon. Varione kinds of fruit are grown in great ypanatities, and extonsive pasthres are fuust in many parts of the conntry. Noxt to naking of wine forms the most extensive branch of rural ininatry. The Ilungarian wines vary greatly, both in tasto and strength; the will-known Tokay being unrivalled in quality. Dense forestd and woods aloothd in the mountinous districts. Dousstic inimals. The Ilungarian oxen are largo and well shaped, und generally of a milk- or gray-white eolor, with lofty and spreading horns. Some of the sheep are very fine, particularly at peculiar breed, with forked horns, The horses of 11 nnilrawiug beavy loals; but they surpass almost all other horses on the Continent in elegance of shape, aa well as in vivacity and nwiftoess. Bucon being a hivoritu fout
vast herds of awine, amonntiag to moro than 5,0 , 0,000 are reareal. A few buffaloes aro fonnd in certain jart of tho country. Ginme of all kinds and fowts art plen-
tiful; bees nro larguly kept; and ther rivers, especinlly

 tant, being generally conlined to not large quantitics
of woollens, silks, linens, paper, leather, oil, beer, and wine, particularly that of Tokay, and wool; also wax tallow, potash, alum, antimony, gall-unts, \&c. A little leather, linen, and iron are also seat out of the country. Imp. Chiefiy maunfactured goods and colonial produce. Nearly 1,000 vessels, some of which are steamhoats, ascend and descend the Dasube, engaged in carryiug on the trade berween the principal towus of Huagary and Vienna. The roals are generally not good, bat railway olic, Grsek Chnreh, Regressing. Religzon. Roman Cath olic, Greek Chnrch, and Protestant, the former in the ascendack. but the higher classes are well-cultured aud highly intel-
ligent. Government. See Avstais. - Pop. $15,564,533$, of which 11,532,810 for Huagary proper.-History. In the time of the Romans, the conntry now called

finu'uary-suater, $n$. An old-fashinned but delicious perrume, for the preparation of which variuus recipes Take of freshisen. The following is one of the best:blussoni 6 oz , rosenary in hlossum + lbs., fresh sage in pieces, mix, and add rectifies 2 ox., cut them in smal water 2 pints. Let 11 pints distil by a git hite ennumon hernit is said to have piven the prigian recipe to a queen of Inungary; and hence it was called the Qtiren of Hungory's Water, which has been abbreviated to Hin. It is employed principally as a perfume for the tive and stimmlant; and it may be need externally as a pently stimulatiag liniment.
Haasiobeel; $n$. Dried-bcef; jerked-beef
Hun'rer, $n$. [A. S. huager, hungor; Ger., Dan., and SW. hungir; Iect. hnogr; Sansk, kanx, to desire, kangha,
desire.] Desire of food; an uneasy zenwation, occasioned by the want of fond; a craving of food by the stemach craving appetit"; a strong or eager desire.
(Physiol.) A peruliar sensation experjenced in the region of the stomach, in consequence of the want of
colid food. The sonsation of hunger is nt first rather colid food. The sensation of hunger is nt first rather
agrecabie, hat it quickly becomes unpleasant, when prolonged. The sense of keen appetite is always delighttat when there is a prospert of satisfying it; lint that sinking in the stomach which easuas soon changea from uneasinpss to absolute pain, which nupidly he-
comes acute; and if aliment be still held tosck, the ses sation produced is as if the stomach were being tora by pincers, A state of general exhatistion, Lererishnews, beadache, light-headequess, often passing into madness, follows. The whole being secems ahsorbed in one desire, before which even maternal inatinct has been known to give way, nuif muthers have disputed with
their companions for the fleals of their dend inflants. their companinns for the tleali of their dend infants.
The physiological canses of 11 . are not wrll understenhl The physiological canses of 11 . are not wril understond
and grout differences exist in the opinion of ncientiffc men. In one acnse, we may all be paid to know what lighten us. We have sll experiencel it : lat as yet science has heen umatle to furnish any sufticient explanations. Betwerl the agreeable stimulns called appetite and the terrible agny of starvation there are infinite gralatlons. Tu ull livimz organiame, reoste and re pirir go on with an incemant und reciprocal activity.

HUNT
HUNT
borning; and hunger is the instinct which teaches us *o replenieh thant firbace. But althumgh the Waint of food causee $H$, it does not itself constitute linmber.
Food may be ubsent withunt the sebasation of $H$. Fliot; and insane people frequently sulject thennselves to pro longed fasting wathout any huugry craviups. Viopen emotions of griof or joy destroy the sente of II.; mit
the sensativo nuy be allayed by opium, totneco, mil the evnsaivo mandances, snch us clay, although nope of these can supply the deficiency of food. In the caso of those animals which remain torpidfor a certhin portion
of the year, no food is titken. and no H. experieverd. (See llmeryatiox.) Want of fived is, consequently, th primary, but not the proximate cause of 11 . A Fremel philusppber made several experimests on the subject of inamition, necorting to which it upperars that
denth from $H$. ocenrs when the waste resclues 0.4 ; that
 is to say, supposing an animal to weigh fou hos, it will
die when its weipht is reduced liy fustimg to 60 lls . Death may possibly occur beforo that otage, but lifo casnot exist after it. In the cure of human thengs, death takes place on the fifth or sixth day of total alistinence from tood and driuk ; but much depends upon the pecnliar constitution of the individual, his age, health, habits, de. Some die on the seend and thard day; while othors can survive ten, twelve. and ever sixtech days. Thero are many records of potracted fistitug but oearly all of them are nut well authenticated, and most of them aro obviously fatulous. The aspect of a etarving man is terrible. Th the first place he grows
excessively thin, nud this thinness is not the Jemaness of Ican men, but manifests itself Ly ummistakable emaciation. The face grows lividly pale, the cheeks sumken, the feverish lirightness of the eyes. Tha punill become dilated and fixed io a wild stare, which is never veiled by the eye-lids. All morements of the buly are slow and dififcolt: the hand trembtes, the voice grows feetle, nud the mind weak; while the poor sutherer, whein osked what he feels, can ooly answer faintly that he is
hmagry. There is very little definite iuformation to he longry. There is very little definite iuformation to he
gleaved concerving the agonies endured ly starving gleaucd concerving the agonies endured by starving
men. Tbose who have undergone the horrurs are selmen. Those who mate undergoe Goldsnith says that the captaio of a wrecked ressel told bim that "he was the only persoo who bad oot lost bis benses when they received aceidental relief. 1 e assured me his painsat first were so great as to be often tempted to eat a part of the men who died, and which the rest of his tionameo of this paroxysm, he fonnd bis pains insujpportable, and was desiruus, at one time. of noticipating that death which be thought was ioevitable. But his pains gradually ceased after the sixth day (for thev bad witer io the ship, which kept them alive shang desire; por did be much wish for food, except when be saw others eating. The latter part of the time, wheo his bealth wits almost destroyed, a thousaud strange inages rose apon lise mind, and every oue of his seuse preseuted with food by the ship's company that took hime up, be could oot help looking at it with losthing. instead of desire; and it was not till after four days that his stomach was bronght to its natural tone, when the violence of his appetite returned with a sort of canine
cagerness." In other anthentic cases, one fact is always eagerness," In other anthentic cases. one fact is always
dreulfully apparent: namely, that thirst is always far dreadfully apparent: namely, that thirst is always far
more terrible than $H$. (See TmRst.) - According to more terrible that $\boldsymbol{H}$. (see Tmist. - Accord thy the emptiness of the stomach, which, is the opiniou of some physiologists, allows the sites of the stomach to rut This, however, is wrums; for $H$. is always felt sume time after the stomach is empty; and as is well knowa, it may be empty for days together, as in ihness, withou
any sensation of $H$. Another theory is, that the gnistric jurce necumulates. and attacks the w,ils of the stomach This, how"yer, has been proved not to be the casc. Dr Beaumont, an Americau physician. who made many valuable observitions on a pitieot who had a hole io his "During the honrs of fasting, the gastric juice is leing slowly seceeted in the follich-s, and theo retained in slowly secceted in the fonlicirs, and thea rectinent in
their tulues, thereby distending them; this distention, when muderate, produces the sensation of appetite, uad when moderate, produces the sensation of toppether writ ers, however, it would appear that $H$, is relatelt to the geeeral state of the system. and also to the particula,
state of the stonach. The stomach of a fustiug nimal is pale, and in a state of olvions othny. So sooner, how ever, is food, or almost any irritaut sulstauce intro-
duced, than the pale surface becomes visibly congested duced, than the pale surface becomes visibly conkested

Hydrav'lic Linnestone, $n$. (Min.) Limestone con taming some silica and some magnesia. When buroud,
this limustone furnishes the hydruulie lime, so called because it will set under water. Some varieties in the Uuited Stites contain 20 to 40 per cent. of matgoesia, and 12 to 30 per eent. of alnmina und silica. In making mortar from this lime, much less sami is nsed than with the ordinary kinds.-See Cexent; Lisme.
Hydara'lie Press. Se Ilvodostatic Press.
Hydrat lie Ran, $n$. (Physics.) A hydrody
Hydract lie Ram. $n$. (Physics.) A hydro-dynamic
hachoe, of simple and beantifnl construction, ioventel by Montgolfier at the close of the last contury. Its ol ject is to raise water without the aid of any other force than that produced by the momentum or moving force of at part of the water that is to be raised. The effect in opposition to the laws of hydrostatic equililrium ; for a moviog colnmn of water is made to overcome an move another column much higher than itself. In Fig
1* 38 , which represento a section of Moutgolfier's $H$. $R$,

fig. 1338. - hymraulic bam. R is the reservoir from which the water falls, R S the hoight of the fall, and $\mathrm{S}^{\mathrm{T}}$ the horizantal tuln which combucts the water to the engine A B II TC. Eand D are ascending, the latter by descemding; ant FG is a pipe reaching within a very little of the bottom CB. The Valvesaro such that the watur nt it normal pressure
eumbot support their weight; the valvo $E$ is prevented from falling lelow a cortatin point by, $\pi$ knob alovere, $m n$. When tho water ivallowed to descemil from the reservoir, aftor fitling the tubu B HS, it moshes out at the nperture ns to force up the valse $\mathbf{F}$, ant rlowe thu means of expape. The water being thms smilhonly chuekel. and umble to

into the rescel A BC, the impulse of the colnmn of fluid is expeoded, the valves $\mathbf{D}$ and $\mathbf{E}$ fall; the opening at $\mathbf{D}$ now rushes out at $m n$ as before, till its motion is amain stopped by its carrying up the valve $E$, when the operation is repeated, the fluid impulse opeuing the valve at D, through which a pertion of the water passes into
ABC. The valves at B aod D thus alternately closing ABC. The valves at $\bar{S}$ aod $D$ thus alternately closing aod opening, nud water at every opening of D making
itt wayinto A BC, the air therein is condenself, for it has ite wayinto A BC, the air therein is condensed, for it has
no communication with the atmosphere sfter the water is higher than the bottom of the pipe F G. This condensed air, then, exercises great force on thesurface, OP proportioned and rases it in the tuhe, FG, to a heiglit priociples of the liydranlic ram are suaceptible of it very extensive upplication. In well-constrncted rams, the mechanical effect obtained should be from 65 to 75 per cent of the force supplied. For raising comparatively emall quantities of water, such as for single houses, farm-yards, \&c., the rum is the beat mechanism yet introduced, since when once set in motion with a continual supply of water, it will work by the momentum generated and destroyed for any length of time. But the places a limit to the nse of the mechanism when es, plied to raise large quantitics

IVACele, $n$. [Gr. hudor. and kele, o tumor.] (Med.)
A term generally applied to a collectiun of seroun of A term generally applied to a collection of serous fluid coveringe, either of the testicle or spernitic cord. Hydroceph'alus, $n$. [Gr, hudor, water, krpiof, head.] (Med.) The term npplied to dropsy, or wnter in the hend. Physicians distinguish it into two wnter in the acuto and chronic, both of which are almost exclusively confined to infancy and childhood. Acute hydroecphatus is an inflammatury disease, rap id in its course and requiriog decided trentment ; chronic bydroceplalus, on the other hand, may go ou for minny years. Tt nente lyydrocephalus the child is usuatly restless and fretful, the skin is hot and dry, the pulse quickuned, th appetite is lost, and the howels costive. The eyes are of pain aod beavinese of the and the child complaine of pain aod henviness of the head. After $n$ tinie the symptome become more manifest. The puin in the bead creased; the expression of the countenance is alterid especially that of the eycs, which are often directed ir regularly, with the pupils nnequally dilated, The atpe tite is lost, and kometimus there is vomiting. The sleep is very much disturbed, and frequently the child awnkes with a lond seream; the pulse is low had irregular, and frequently courulsions thise place. The dianse often proves fatal int two or three days, or even less: lim fometimes it is protracted over tho or three werks, de punding chicfly upon the age and strength of the child, athd the violence of the disease. The treatment of this disease mont neecrarily dejend upon the stragth mid cond the of the pationt, the great olject being to snl be freely sbstracted by leeches, and some recommend the free use of the luncrt. Active purgatives are also to he administered. When the netive eymptomis of the disense have heen overebme. the aystem is to he graduhydrocephalus differs from the other, mot unly in its progress lieing mach shower, but from lucing rarely or only klichtly nttended with inflammution, and from there leeing always more or less of a collection of watery fluid in the lrain, which is not insariably the ense with tho
former. The chronie form in frequently hereditary, ocformer. The chronic form is frequently hereditary, ocand it insmally maknes its mpluarance before or specelily after birth. The flmid konectimes ambunts for many
 brames enveloping the brain. hut more frequently it is contained is the ventricles, nat other canstion of thas
nrgan itself. This disease is always sttended with marc or lexs inteltectaul derungement. Tho ispech in iorper fect, and the power over the voluntary muscles is purtially lost. These symptoms gradially increase; conver sions and paralysis at length muko their uppearance; ant deathat last supervenes. The daration of the dischace is extremely various; sometmes it may go on for mumy in a few months, at other fiomes which this disense usulyears. From the carly period nt which fors dune to arrest stly makes its nppearance, littlo can be done to nrrest
its progress. Sometimes puncturing the bead his been its progress. sometimes
nttempted with success.
Hydrocharida'ceae, Hrpancestans, $n$, pl, (Bot) Attorder of plants, adherent ovary. - The specles are inhabitants of fresh water. Their tlowers are spathaceous, rexular, diecious, or polygamous; the perianth is buph rior, in 1 or 2 whorls of 3 piects, the iuner whor heme petaloid; the ovary is inferior, 1-9-celled; the fruit in dehiscent, with numerons steds, which nare many of these mes. The fresh-water aquarnom hise of them, Jalisnerad simple plants familinr cobecta. One of of all aquarian spiralis, is the plansis alsintstrum, the American Wiativ plants. The whit- preripitate of the acid thas olitaned is washed with hydrochoric ncit, dried in ralses on a tile, and crystallized by the ndtit
II y drofluer'ic Acidi, $n$. (Clem.) A very remarkable acid, formed of flumrine end hydrogen. It has in very
 pounds with great facalig: it is therent it mecencory fase preping very grent. In commerce, vessels of lead ore generally used; but when it is desirable to ohtrin an acid of jurfect purity, platinum vensels are enpluyed. To prepare this anlistatice, 1 part of tintly prowired flum-spar is mixell with 2 parts of oil of vitrici, and the gelatinons mase bo formud in distiltel in a leaden retort, to which a It-tulu- is fitted. The E-tule is surrounted
 over. II ydrofitorie achis a densely funang, mblorleta rolatile liguill, hoiling at $60^{\circ}$, and freeking nt atront-d
Fahr. The pepmention of the acill must be conducted Fatir. The prepmras fumes of it net very deleterious and a trup falling on the skin will wesamin a derpl and painful fore. Pured into wster, it carees the evolution of grent lownt. It is cakily recognized by ite corrusit artion on glans: anul a wrik solution of it is muth nerd in the arts fur etching that sutatance. Thu glass to he etched is cowred with herswax. the disign le eng truced on the wax with rn etching tral. The whole is then expowed to the action of the ned., which contraway thene burtions unprotected ity the wrx. Fifrit hyllofluoric forming flwerides. Fbrm . If F. 11ydrollatovilic'ic Aciel. $n$. ( Chem .) An acid only kuwn in the form of mbution. Which is olitainpl in IE, drogen. $n$. [Fr, hyfrogine: Gr. hulor, water and Brnumó, to

gas, it was first liquefied hy Cailletet, at Paris, in 1857 is the lightest substanca in vature, 100 cubic ches of it weighing only $2 \cdot 14$ grains. It wes at on time donlted whether it existed in the uncombined etate in nature; hut the experiments of Bulsen prove that it is evolved, though in very variable propurtions,
by the solfaturas of lceland. In combination with by the solfaturas of leeland. In combination with
water, it is most extensively distributed throughout nature. It also exists in combination with oxygen in most iuflammable minersis. It is an important elenent in all organic substances, and enters into the com prom the mineral, vegetable, or avimal kingdom. Haviog a very great attraction for oxygen adad chlorine when in the mascent condition, it is nuch epiployed in the latioratory for deoxidizing or dechlorioating purposes. It is prepared in a variety of ways, the most
psual being by pouring dilute sulphuric acid on granulated zinc or iron clippunge, when the following reaction takes place:
It onay also be prepared by passing stea
iron filings, by pluaging sodium or potissium into water or by electrolysis of water; all of which methels at more scientifically interestiog than practical. When zinc and dilute sulphuricacid are used, the gas passes io this way, it contains a number of impurities, such at io this way, it contans a number out these naty be rearbented by passing the gas through solntions of hydrate of potash, nitrate of silver, aud oil of vitriol. Mixed with air, it may be breathed without any other effect than raising the pitch of the voice nally notes ligher. Mixed with oxygen, vlefiaot gas, or atmuspheric air, it
forms ag explosive compognd of great power. The real forms ao explosive compound of great power. The real
nature of $H$. has long beeo en interestiug point of dis nature of $H$. has long beeo en interestiug point of dis cussion among chemists, many supposing it to metal in a gaseous form, and prophesying with curtainty with Dumas, that, if ever it is liquefied, it will present the appearance of quicksilver; while others contend both the bisic properties of a metal and the chtorou properties of a gas. The prophecy of Dumas has been propently verified, sad not onily $H$., but sil the so-called peramment gases have been rednced to the liquid state, an achievement the more remarkable as it was the result of the simultaneous but entirely indepeadent labors of two distioguished pbysiologists, M. Csilletet, of Chât-illon-sur-Seine, and M. Pictst, of Geneva. On Dec. 30
1877 , M. Cailletet demonstrated the possihility of lique 1877, M. Cailletet demonstrated the possihility of liquefying acetylene, carbonic oxide, $\boldsymbol{H}$., aitric oxide, nitro-
gen, and oxygen; sad on Jan. $10,187 \mathrm{f}, \mathrm{M}$. Pictet sucgen, and oxygen; asd on Jan. $10,187 \%$, M. Pictet suc-
ceeded in liquefyiag aad solidifyiag $H$. (see Annales de ceeded in liquefyiag and solidifying $H$. (see Annales de
Chinie et de Physique, ser. 5 , vols. xiti. and 2v.). The Chime et de $H$ hysqque, ser. 5, vols. 2iik. and 2v.). The
power that $H$. has of being replaced by metals in its power that $\boldsymbol{H}$. has of being replaced by metals in its
combinations has led Gerhardt aod others to classify metals in eccordaoce with their hydrogen-replacing metils in eccordaoce with their hydrogen-replacing power. Nost metals replace one athm of hydrogen io others replace two atoms of hydroren, such as pallaothers replace two atoms of hydroren, such as palladinm, platioum, sud tia; hydrogen, such as bismuth, arsenic, and antimony. Others replace tbree atoms of hydrugen by two
of metal, such as aluniaum, iron, manganese, and others, two atoms of which replace one of hydrogen. In these cases, the basicity of the metal is often expressed by dashes over the symbol belonging to it. Thus, clitoride of bismuth is written $\mathrm{Bi}^{\prime \prime \prime} \mathrm{Cl}_{3}$, and bichloride of platinum $\mathrm{Pl}^{\prime \prime} \mathrm{Cl}_{2}$. This system of expressing basic power
was first used Ey Odliog. H. is not only replaced in its compounds by metals, but also by coomplex organic its compounds loy metals, bit also by coomplex organic
compound atoms, such as ethyl, methyl, \&c. The theory, too, that $H$. can only exist separately in the state of double atom, is daily gaining grouod, much light being throwe on the subject by the consideration of the propTlus, hydrochlidecrensented as a donble atum of $H_{\text {, }}$, in which one atom is rephaced by chlorine. It nnion with other bodies forms four great types, in which
all compunds rue modelled. These four are III ${ }_{1}$, IICl $11110_{2}$. HIIIN. (See also Types.) HI. is used princi pally in the oxyhydrogen blow-pipe. The ehief compounds of $I T$. sre water, ammonia, hydrochloric acid sod many others, which will be found descrilicd under
their respective heads. Equiv. 1. Sp. Gr, 0.0092. Combrang volume 2. Synbool Z.
$H$. (Binnxide of $)$ a pecnliar compound, discovered ly
Thetrd in 1817. It is generally prepared by digesting hiooxide of barium with a diluto aeid, at a bluw tempern tuoxide of harimm it is a colorless, transparent, syrupy liquil, with a harsh, hitter, and astringent taste, It does not freeze Its sp. $y$ r. is 1.452 . From the extra equivalent of oxy gen beibg fo loosely combined, it is set free on nearly every occasion. As might he expected, peroxule of hy-
drozen is a powerfully oxidating agent. It lans as yet received no extensive nse, although it hiss leen em-
ployed oceasioually in mudicine. Epmix, 17. Form. $\mathrm{HO}_{2}$ ployed occasionally in modicine. Elmie. 17. Farm. In $2_{2}$
II. (Irrsulphide of $)$, a light-yelhow, transparent, oily flnid, pressesaing a pechliar acrid wlor and litter-swr.t taxke, profluced ly utding an excess of hydrochloric

Hy drograph'ieally, adv. In an hydrographical IIy ylrog'raphy, n. [Gr. hudor, water, and graphō, to describe.] The description of the waters existing ou the surface of the earth; particularly with reference to the bearings of the coast, the depth, currents, aod other circumstauces juportant or usetul in navigation. A. inplics the same thing with regard to the sea that
geography implies with respect to the Jad. - Hydrogeography implies with respect tojections of some parts of the ocean, in which the meridians, parallels, dc, with the codsts, capes, rocks, shallows, dc., are laid
y y rohsern'atit
Hydrohzen'atite, $n$. ( M $_{\text {c. }}$ ) A hydrated oxide of My'Alroidl, $\alpha$. (Zoül.) II ydra-like-Agassiz.
III $y^{\prime}$ droidie, n.pl. (Zoül.) An order of Acalephs, which, in the classificstion of Agarsiz, includes the lowest acarphs, and embraces two more or less distinct forms, one miodsch, toongh having the structure of ecalephs, re the Medusx propp; All the socslled hydroid polyps, and the aaked-eyed meduse, belong to this order, which is divided into K sulh-orders.

11y'drolile, $n$. (Min.) A name given by some to the miaeral Gmelinite (q.v.), from its containing about
percuat of wator. IIydrolog'ieal, 11ydrol'ogisi, $n$. One skilled in hydrology. aud logos, discourse, doctrine.] (Ihys. Geog.) The doc triae or scieace of water, its properties, phenomena and laws. The principal part of the water on the globe occupies a large depression of the surface, and is de nominated the Ucean. Different parts of it are knowa as the Pacifio, the Atlantic, the Indian, the Arctic, and the Antarctic oceans. The reat of the surfice rise above the levch of the oceau, or if depressed is occupied by watere that do hot connect winh the grest body of the ocan. The form the haod, or, in other nords, ocean with the land is extremely irregular, the water entering the land at numerons recesses, and the land projecting into the water by various promontories. The projectiag intler arealled JxLind SEAS, GuLFs, or Bays, according to the extent to which the water is land-locked. Tbe waters reposigg in hollows within the land are called LakEs; a ad the waters ranning along the surface to enter the oceag or the lakes, or le lnst in plaius, are called Riveas. The rivers counect with each other, and form large and definite Kiver Sistems, drauiog definite tracts of laod. The grand phenonena of the ocean in-
clude the regular Tines aod Cuanents which effect it, the Winds fund Sturms which disturb it, its tempereture depth, and miocral contcote. The phegomens of tresh water actually on the surface are quite distiact; : tind the phenomens of water in the atmosphere, including the falling und distrilution of rain, belong to NeteoRULOG x. another department of Plysical Geography. Few things conaected with the laws of matter and the those which belong to earth are more ofrwater aronnd and through the earth. The warm air that floats above the surface of the ocean is constantly raisiog vapor, with which the atmosphere is charged to the extent of at least fone parts out of five, being realy to give it off at the slightest chatige of tempersture. When the air in this, state impinges upon land, it bccomes eitier more heated, fud therofore more absorlunt (the additional supply and io a condition to deposit moisture as rain. Thus, on all high grounds, which are tiecessarily colder that the lowlands in the bame latitude, and on all cooler latitudes to which clouds are drifted, there is occasional rain, often very heavy and continnous, over large tracts, The rain that thue talls is partly, no doubt, reabsothed into the air, or is used in the production of vegetable and animal tissue. A great part, however, ruas along the carth's surfice in streams and rivers, circulating at the eurface visibly, and the rest enters the etrata, pervales, then, and passed through them invisibly from place to place, coming out acain in springs, aml completing an-
other circulation ont of tight. The influme of water other circulation ont of tight. The influence of watur
is felt everywhere; and all the phenomena of structure is felt everywhere; and and the phenomenimen by this complete and never-censing circulation. $I I$. is thus : department of great importance and interest. The detains will be found cousi-lerod in varions selparate articleq. fydroninas recarlmate of marnesia, found at llohoken, N. J., ant cxas, Pa. Sp. gr. 2*145,

ing or reducing ores in the wet way, or by means of Hy yulroniteorolou'ieal, $a$. Belonging or relatiag IIy drometeoroliony, $n$. That depertment of meteorolugy relating t
rain, \&c. - Webster.
Hydrome'teors, n. pl. [From Gr. hudor, water, and meteoru, meteors.] A term generally spplied to the aqueons pheoomelia of the stulusphere, ns raiu, snow,
luai!, \&c., taken collectively; - but also sometimes used luil, \&c., taken
in the singular
II ydron'eter, $n$. [Fr, hydromëtre; Gr. hudor, water, and metron, measure.] An instrunuent for measuring the relative deusities, or specific gravities, or inids; aud ioversely as their epecific gravities. The principle upun which the ordigary hydrometer is constructed is as follows: - When a budy is immersed in a fluid, it loses as much of its weight es is equal to the weight of the "uid which it displaces. Thits, it a body be suspended trom one arm of e valance, and contuterpoised by applying weights to the other arm ; aud then, while suspeuded, it be immersed ia water, it will he found that the consterpoisiag weight is not sufficient, and in order to restore egnitibritim, a weight equal to the weight of the be immersed in two different fluids, the weights which it will respectively lose in each will be directly proportional to the specific gravities of the fluds, displaced, - that is, the magnitude of the body multiplied by the specific gravity of the fluid. The same principle holds good in the case of sohstancea which are heer than the fluid; for when a body floats upon displaced is a that All the instruments called hydrometer, or aberometer, are constructed upon this priaciple in hydrostatics. Bumnés ( Fig. 1341) is generally recognized in the U. Sates, asy for liquid hed on the Continent of miade of two sorts, one for liquids lighter, and miade of er for those heavier than whiter, and thee there are varietics for special liquids, For acids or sillts the instiument is grailoated by siokiag it first io pure water, and ballasting it so that the water line shall be near the top of the stem. This fixes the zero point. It is then floated in a solntion of 15 parts lyy weight of dry common salt in 85 parts of distilled water and the point cut by the water liee is marked 150. From these the whole stem is divided into degrees, which should reach to $66^{\circ}$ for 6ulpharic acid. The greater the degree indicated
in its use, the more dense is the fluid. For in its use, the more dense is the fluid.
epirituons liqnors the zoro point is determined from a solution of 10 parts st dry balt in 90 of water in which nearly the whole of the stem should lie out of the fluid. The 10 degree point is given by pure water, and the degrecs are from these marked npward, even to $70{ }^{\circ}$ for sulphoric ether; the larget the degree iodicated the lighter the fluid. Iastrmments short recine ase made from these, but with The specific cravity of a liquid is ascertained Fig. 1341 from the iadication of the $H$. of the first class by the formula, $g=\frac{152}{120-d}$; and of the $2 d$ class, hy $g=$ $i 3++d$; being the degree given by the scale. Bul tables are prepared for convenient reference.- Cartier's French. is als is maded by French. It is made by adopting the 2 point of Banmé,
and dividing the 16 derrees on each sido of this into I5 equal degreet. The degrees of Cartier (C) ure couverted equal degrees. The degrees of Cartier (C.) are converted mula, $16 \mathrm{C}=15 \mathrm{~B} .+22$; whence the specific gravity; $g$, correspondiug to C. degrees $=\frac{1368}{12 \pi i+\mathrm{c}^{\circ}}$. The $\boldsymbol{H}$. of Baumé and Cartier are based on the temperature of $12.5^{\circ} \mathrm{Cent}$ ( $\left(55^{\circ} 5^{\circ} \mathrm{F}\right.$.) : and when used for a liquid at a different temperatore, Hllowance is to be made, as given Act of parliament to be uset in collectimg the spirit Act of parliament to be used in collecting the spirit finches in length, divided on hoth sides into eleven equal parts, each of which is ugain suldivided inte two. This betem carrice a hollow brass bull, about one inch and a halr in diameter, in which is fixed a conical stalk terminuting in a perur-xhmetl weight, so that when the instrument is placed in a fluid, it may flost with the other extremity purpendicnlar to the surface. Tenl different weights of diff-rent nagnitudes ure also applicable ta
the lower portion of the graduated stem. Nine of these the lower portion of the graduated stem. Nuse of these weights are chrcular, with a slit in each to 5 the ste0u,
and are numhered respectively $10,20,20,40,50,60,70$, and are numbered respeetively $10,20,20,40,510,60,70$,
80 , and 90 . By the encceasive nuplication of these, the S0, and 90. By the succesaive applicution of these, tho
instrument may besunk so as to ohtain the whole rango of specitie gravities, from pure aleohol to distilled wuter. The tonth weight is in the form of 4 puralleleplipet, and
 ema be fixelf, when In order to enlealati- the strength of a pertion stem. In oriler topirit loy this hystromater, a partion of the ligund is placed in a tall glase vesuld, and tho temperature noted
liy mons of the tharmoneter. The instrument is then fisated, ani one or more of the wrighte is adiled, until the lower part of the scal. sink lienenth the aurface. The mumber on thustems in contact nith the marfisea is
theon oliserverl, athl addel to the manher of the circular weight esuptojed; and this thind tumber is rufurred to

Hydrostat'ies, $n$. The science which treats of the mectanical properties of fluids; strictly speaking, the
weight and equilibrium of fluids. The weight and equiWeight and equilibrium of fluids. The weight and equi-
libriums of fluids at rest are the oljects of this science.

## Fig. 1345, -hydrostatic paess.

When the eqnilibrinm is destroyed, motion ensues; and the science which considers the laws of thaids in motion is hytraulics. The whole dotrine of the equilibrium enin pressure of liquils is dednced from the following
fundamental law: © When a liquid mass is in equiber findamental under the action of forces of any kind every mile cule of the mass sustains an equal pressure io all directions." One of the most ubvions consequencers of the aluve law is, that the surface of a liquid when at rest in an open vessel, and acted upon by no other force than gravity, is horiznatal, or perpendicular to the direction
of gravity. If the directions of gravity ore pratel of gravity. If the directions of gravity ore purailel,
the surace will conscquently be a plane; if they conthe surlace will conscquently be a plane, if they con-
verge to a point, the snrface of the liqnid will be aporverge to a point, the sniface of the liqnid will be apor-
tiun of a spbere. Stagnant water at the surface of the earth, therefore, assumes the spherical tigure; lut liy earth, therefore, assumes the spherical tigure; but liy
reason of the magnitude of the sphere the carvature of any small portion of it is insensible, and the surface may be regarded as a plane. A riag surroundiug the only eighit inches in a mile. If a perfectly striaght line made between two or more vessels containing a ligulit hy pipes or tubes, or otherwise, the surface of the liquid when in equilibrium will always stavdat the same level. The liquid contained in a vessel teing nt rest, and subjected to the action of gravity only, ony particle of it is pressed in all directions (vertically, horizontally, or obliquely) ly a force which is equal to the weight of the vertical column of the liquill incumbent on it. Instead of a particle of the liquid itself, we may consider the column to rest on ao indefinitely small portion of the bottum or the nides of the vessel in which it is condefinitely small portion of the the pressure on an inbottom or sides is perpeadicular to th any point of the area, and equal to the weight of at vertical columo of the liyuid stanting on it as a base and reaching to the surface. Hence the whole pressure sustained by any finite portion of the bottom or sides of the vessel is equal to the weight of a columo of the liquid having for its base the surface pressed on (extended into a plave if necessary), and for its altitude the distance of the centre of gravity of that snrface from the surfice of the liquid. The point of a plaze surface at which the resultant of all the liquid pressures upon it is applied, is catled the centre nf pressure. From the nbove it follows that the pressure on the bottom of the vessel deperds only on liqnid, and is entirely independent of the torm of the silles and of the qusptity of liquid in the vermon the on this principle that the hydrostatic press (Fig. 1345) and hydrostatic bellows (tig. 13+3) are constructed. A
body immersed in a liquid is pressed upwards by a fore eqnal to the weight ot the lipnid it displaces : and the
difference betweun the and difference between the absolute welgit of ia bouly thid
its weight when entirely inmerselt, is the wame with the weicht of a quantity of the liquid equal in lalk to the boty. The sprcific grawly of a boty, therefore,
being the ratio of its own wolight to that of an equal being the ratio of its own wright to that of an equal
volume of water, may at once be fond by weighing it first in air and then in water. The equilibrium of fontid first in air and then in water. The equilibrium of ontid
burlice thating on lignits, chimetey in his treatise De Humido Insidentibus. is an
cher important part of hydrostatics in consequence of ity relation to the constraction and stowage of ships. A luxly phaced on a fluid specifically heavier than itsclf, will nink no far that the weight of the fluid displnced is equal to the whote weipht of the haty; aut when it sesymuses the position of equilibrimm, the line which joins
the centre of gravity of the botly nund the contre of the centre of gravity of the body rnd the contre of
bungunuy (which is the stme as the centre of gravit buthyancy (which is the same as the rentre of gravity
of the inmersed part sapposais to lie hompgeneuns) is phrpendicular to the nurficeor (he water, or thene horizon The centre of gravity of a buly is afixel point rells-
tively to the bsuly itsalf: but the centre of thanyanc: Which, deppudumy the fiff: but the centre of buyancy change its place when the figurne or relatives siturnt, with of
the immectiol pat
 upoo the relative positions of the centros of gravity
and hayancy with respect to a certain point called the which the which latter may be defined as the point in centre of lmoyancy, iu the position of equitibrith the intersected by the vertical through of equilibrium, is ancy correspooding to a slishtly altered position of the frum the forme macentre may in all cases be determined from the form and deasity of the body, and the equilitrium will be stable, neutral, or nustable, as it falls

A datio example, those of Aix-lia-Chapelle in thermany waters, as, for example, those of Aix-lia-Chapelle in Germany, Barèges in
France, Abano in Italy, and Harrogate in England, and France, Abano in Italy, and Harrogate in England, and
is evolved from funaroles and volcanoes. It is formed spontaneonsly wherever sulphurous organic mattertare sponadeovsly wherever bulphurous organic mattersare
uodergoing putrefiction, us, for instance, in staganat sewers and cesspools, and in waters charged with organic matter and sulplates, especially sulphate or lime. There are several wuys of preparing this gas, which is very extensively used in latoratury operations. The followiog is that which is mist commonly enployed sulplide (the old sulphuret) of iron, in small fragments, is piaced in a bottlie, and dilote sulphuric acid is added. the sulphur of the sulphide to form hydrosulphuric acid, which escapes as a gas, while its oxygen enters (Feo , which unites with thou, forming oxide of irou ordinary protosulyhate of iron or green vitriul, which remains in solntion. Hydrosulphnric acid is a colorles gas of a strong and very maiuseons odor, resembling that of rotted eggs. It consists of two volumes of hydrugen, and one volume of salphur vapor condensed into two volmmes, which form its combining measure. It is about seventeen timus heavier than hydrogen. By pressure it is liquefied, and by the ndditional application of Cold, it way be oltained in the solid form (see Gases). Water dissolves, at $59^{\circ}, 3 \cdot 23$ volumes of this gats, but
the solution soon luecomes milky when exposit, air, in consequence of the oxygen of the nir combinine with the hydrogen of the oxygen of the nir combining cipitated. It is lighly conlunstille and being pre-pale-blue flame, producing water ind sulpharous thia and, yenerally, a deposit of sulphur. It has a weik acid feecule acid, forms one of the hydracids. Althougb a $a$ reagent is dependent on the fact, that many of the sulphides which it forms with metaltic oxides of in soluble in water, aod are thrown down trom sulutions as precipitates with characteristic colors. Thus the ges, or a watery solution of it, gives an orange precip itate with the compoands of antimony - while wit those of arsenic it gives a yellow - with those of lend and of silver, a black -and with those of zinc, a white preciptate. The air of a room elightly impregnate with this gas may be breathed with iuzpunity, but faintues quantity of the oudiluted gas inspired prodnce portion, was found by Tbenard to prove fatal - birds perishing in air which contained $1500^{\text {th }}$, and a dog io air containing $\frac{1}{80} 0^{\text {th }}$ part of this gas. Its poisonons effects are best connteracted by the inhalation of very dilute chlorine gas, which may be readily obtained from a little chloride of lime placed in the folds of napkin mostened with vinegar. A very minute trace of this gas may be detected liy placing a piece of paper
moistened wth a strong solution of sul moistened with a strong solution of sugar of lead, over
the vessel or apertnre - as Uhe vessel or aperture - as, for instance, over an open-

form, descends form, the batl $b$. This baH, having thirds Filled with ether, is heated over a lamp till
the fluid boils the flaid boils,
and tho vapor is and tho vapor is-
sues from the casues from the ca-
pillary tube, $f$, pillary tube, $f$,
which terminates the ball $a$. The vapor having expelled the nirtrom poth balls, the cametically closed by the flame of a lamp. The other
ball, $a$, is now to
be covered with
 brass, and the trapsecerse socket, $i$, is mate to hold the lass tube in the manner of a spring allowider it to glass tube in the manner of a sping, altowiog it to
turn and be takeo out with little diftheulty. A small thra and be taked out wath littie the pillar of the stand The manner of using the instruvent is this: Theving drisen all the ether into the ball $b$, by tho heat of the hand, it is to be placed at an open window or out of doors, with the ball $b$ so situated that the surfuce of the liqvid may be on a level with the eye of the obBerver. A little etber is then to be dropped on the covered ball. Evaporation iomediately takes place, which. producing cold upou the ball $a$, causes a rapid and contintuons condensation of the ethereal vapor in the inte rior of the iustrument. The consequent evaporatioi
from the incladed ether produces a depression of tem perature in the ball $b$, the degree of which is measured perature in the bal $b$, the degree of the then is almost instanby theous, and the thermometer begios to fall in two seconds after the ether has been dropped. A depression seconds after the ether has been drapped. A depresston
of $30^{\circ}$ or $40^{\circ}$ is easily produced, ind the cther is some times observed to boil, and the thermometer to lu driseo below zero of Fabrenheit's scate. Tho artificial cold thas prodnced canses a condensation of the atoiospheric vapor upon the ball $b$, which first makes its appearance in a thin ring of dew coincident with the surtace of the ether. The degree at which this takes place must be carefully noted. It very damp or windy weather the ether shonld be very slowly dropped upon the bill, othas to reader it extremely difficult to be certiin of the as to render it extremely diffanit to bo certan of the quires to be well wetted more than once, to produce the quires to be well wetted more than otsce, to produre the consists of two thermometers placed side liy side, one having a dry lulb atn the other a bulh covered with muslin, bept moist by means of a striog diphing in water. The wet bull is chilled by the evaporation of the water from it, since this evaporation reoders sotis of its heat latedt. The drier the air, the more rapid the evaporation, and the greater the difference between Hygrodzik is an improved form of M.sod's H. It differs rom all other $\boldsymbol{H}$. in having a dar a pere of inmidity at a glance the temperature, the aegree of hamidr and the dew-point

## HY PO

Hypnot'ic, $a$. Thnt canses or promotes sleep; aoporifi - $n$. A modicine which induces sleep.

Hyp'notivin, $n$. (Physiol, and Med.) A teran invenerd ly Dr. Braid, of Manchestor, to desiguate cortain phenoment of the nervous systom which in many respects but which clearly arise from the physical and pxychiesd condition of the patient, anl not from any vemanation proceeding from others, The following are his dirictivos for inducing the phenomem, nud especiany the peculiar sleep-tike condition of hypnotism, hake as tween the fingers of the left hand, alsont a foot from the eyes of the person experimented on, in such a pasition above the forehead as to prodnce the greatust atrain on the eyes couspatebe with a steady fixed stare nt the of the object at which he is gazing. His pupsils will tirn the object at which he is gazing. Tlis pujais will irs contract, unt soon dilate considerably, nand it, nitur the erator's right hand, extended and a little separated, are carried from the olyect towards the eyes, the eyelids will most prohably close with a vibratory motion. Af ter ten or fifteen reconds have elapsed, it will be found that the patient retaine his arms and legs in any pusi tion in which the operator places them. It will also be found that all the special senses, excepting sight, are nt first extremely exialtel, ns mase are the muscmar mon the exaltation of function is followed ly $n$ state of de pression far greater than the torpor of nathal slace pression far greater than the torpor of naturni sldectityof the muscles and the profound torpor of the nervous bystem may lie instantly removed, and an opposite condition be induced by directing a current of air ngains the muscles which we wish tor render then we wish to excite to action; and there te-
gan win gan we wish to excite to action; and then boy mene condition. If a current of air directed against the face is not snfficient to aromse the patient, prossure and friction should be applied to the eyclids, and the arm or lep
sharply strnck with the open hand. From the carutul analysix of a large mumber of experiments, Dr. Brais is tell to tho conclukion, that by a continual fixation of the mental and visuall eye upon an object, with nbsolute repose of hody and peneral quictude, a feeling of stupar supervenes, which rebilers the patient liable to be reatily uffected it the manor described. As the
ment sneceeds with the blind, he considers that nut sa much the optic, as the sentient, motor, and syn pathetic nerves, and tho mind, throngh which the inpression is made." Many of the minur operations of surpery have been performed on patients in the hypno
tized state without pain, and hypnotisns has heen sue tized state withont pain, and hypnotisni has heen sucforms of disease, especially such us have their seat in the nervons system.
IIyp'mofize, v. a. To produce the hypnotized statethe presence of a smaller quantity of oxygen thath thit contained in the acid or componnd to which it is pre-
fixed. Thns, the hyposulphurous acid contains less oxygen than the sulphurous, aud the hyposutphuric acid less oxygen thas the sulpharic, and the hyponitrous
acid less oxygen than the nitrous. acid less oxygen than the nitrous.
$n$. [Contr. from hyprichondriasis.] Depression of spirits,

lepse or retura of a disease.- Dunglison. Hyp'ostyle, $n$. [Gir. hypostylon, from hypo, under, $y$ columos or pillars.
II yposul'phate, $n$. (Chem.) A salt resulting from the naniun of hypusulphnric acid with a base.
Hyposul'phife, ${ }^{n}$. (Chem.) A compound of hypoBulphurous acid and a base
Hyposulphu'ric Acid, $\boldsymbol{n}$. (Chem.) Anacid formed by passing sulphorous acid through water in which
finely divided peroxide of manganese is suspended. If the liquill is kept cool, hyposulphate of manganese is
 ric acid. Its salts are important. Form. \&o
Hyposili'pharoms Acid, Dithionons Acid, Tai-
sulehumi Acid, $n$. (Chem.) This acid is formed io combiostion with soda by fnsiog equal parts of carbonate of soda snd sulphur, dissolving the impure sulphide of eodium formed, and passing throagh the solntion a current of sulphurons acid natil it ceases to be absorbed The liquid is filtered wad evaporated, and large crystals of hyposulphite of soda are formed. This salt has recivedimportant spplications as a fixing agent in pho tography, and as sa antichlorine in bleachiog, to reor fabrics. The acid has never beeo isolated; for if a strooger acid be added to any of the hyposulphites, it aplite op into $\mathrm{S}+\mathrm{SO}_{2}$. The byposulphites are easily recognized by the pruperty they possess of dissoiving chloride of silver, forming with it an inteneely swee colntion. Besides the double hyposulphate of soda and gold, which is nsed fo photography uoder the name of sel d'or, the salt of soda is the only one which has re-

Hypot'ennse, n. Sue Irvpothenuse. (Ctril Law.) The right acquired by the creditor over by him debtor as security for his debt, although he be not by his debtor as security for his debt, although he be not
Hypofh'ecafe, $v, a$. (Law.) To mortgage.

- Yo state by hypothesis.

Hypotheea'fion, $n$. (Civil Law.) An engagement by which the debtor assigns bis goods in pledge to a creditor as a security for his deht, without parting with lar, from the simple pledge.
(Law of Shipping.) The pawning of a ship for necee-
aries, or to raise money it some critical emergency.
Iypofh'ecafor, $n$. One who pledges a ship
property as security for the who pledges a ship or other
property as security for the repayment of money bor-
rowed. - Wright.

Dervous affection to which females are particularly zob ject, and wbich is generally connected with nterioe ip regularities. It occors must frequently with persous
between the ages of fifteen and forty-five or fifty, and is most common with siugle women of weakly constitution, and who lead sedentary lives. This complaint appears in auch variety of forms, and simulatee such a variety of diseases, that it is ecarcely possilile to give a just character or definition of it. The attack is usnally preceded by dejectiou of spirite, anxiety of mojod, diffifrom the stomach into the throst, and threatening to stop the passage of the air: then the trunk and limber of the body become violently convulsed, the limbe sobs and cries, and occasionally bursts ont into fits of langhter. After a time these nymptoma gradually cease, a quantity of wind is evacuated upwards, with freqnent sighing and sobbing, and the woman recovers the exercise of sense sud motion witbout any recollec tion of what has taken place during the fit; feeling bowever, a bevere paí in her head, and a gorepess all over her body. A fit of hysteria may last from a few mioutes to several hours, or even daye. It is to be dising at the month, by the sobbing and cryine foaming at the month, by the sobbing and crying, by the
milder expression of conntensace, sad by its being gradual, and preceded by the sensation of a ball. Hys gradual, and preceded by the sensation of a ball. Hysthe heart and difficult respiration; paine in different parts, as the hesd, left breast, \&c.; different forms of paralytic affections, dc. The hysteric fit, bowever alarming and dresdful it may appear, is rarely accompaoied with danger, aod oever terminates fatally mules it passes iuto epilepsy, or the patient be in a very re duced state. During the paroxysm, the first care is to see that the patient do oo injory to herself by striking ber head or hands against any hard substances, nor to othere by biting. If the fit be slight, it may frequently filling the mouth with something of the face, or by tate, or by applyint tome stimplating ecent to the pos trils. If more serions, the face and neck onght to be freely exposed to the air, the forehead bathed with wet clotlis, and a slight purgative adminietered. lo some cases hysteria is owing to plethora, or fullness of blood in others to deficiebcy of it. In the former case, a spare diet, exercise, and occasional purgatives are recommended, with eometimes the actual abistraction of blood in the other case, the system is to be kept up and sus tained by nonrishing diet aod tonica, particnlarly iron. The patient's mind is to be kept as cheerful and tranquil as possible oy agreeable company; und all teagreat canse of the prevalence of this disorder amon great csuse of the prevalence of this disorder among and mental training to which they are subjected. Were their physical framee developed and strengthened by proper exercise, and their mental powers kept in prope subjection, there would be much less of hysteria.

Bitler Sweel (1858), Miss Gilleerts (Grrer (1560), Life of Bitter Sweet (1858), Miss Gillerts Chrer (1560), Life of
Lincoln (1865), Arthur Bonnicustle (1872), and Nicholas Lincoln (1865), Arthur Bonnicustle (1872), and Nicholas Minturn (18i7). From the commencement of Scribner
Miagazine, in $1870, H$. was its chief editor Holly Sy stem. A term applitd, frotn the name of th in veutor, Birdsell Holly, of Lockport, N. Y., to a system of water supply and steam-heatting. The city of Rochester, N. Y.. Was first anpplied wath water in 1874 by numerous other towns. It owes one of its principal advantages to its Leing the best possille systenfor extinguibhing fires, and alsio for keeping all the supply-pipes coustantly filled, and maintainug a neariy equable pressure in them. It may employ steam or water as a power, and withe sumicient reserve force to allow of 100
lbe, or more to a square inch to be broneht against the water in the pipes. - The first successful illustration of the Holly system of steam-heating was made at LockThis it has since bees introduced into other cities used for the is similar iu principal to that hishert water; that is, there are largs generators as gas and ateam is made under a pressare of about 60 pounds. From thence it is convesed to the buildings to be warmed by mains, buried about three feet, and connected with this service pipes leading into the honses, where meters are placed to register the anmonnt of
steam used. It can he turned ou or off at pleasure steam used. It can te turned on or off at pleasure,
and ouly used where and when required. To render and only used where and when required. To render
the nir moist, and to dispense with the disagreeable noise, , ometimes cansed by closed pipes, Mr. Holly has introduced a new radator, which is open at the bottom,
 a vulve at the meter, so adjuated as to redice pressure by sure in the house, if need be, to only a few ponds per square fuch. No vapor escapes in the room, per is there any difficulty in kaeping the temperatare at any desired dogree. It is free from dust and avords all risks of fires. The steam thus generaliy distributed may be applied successtally to a larke number of oper-
stione, as the extiuction of fires, couking of food thenting atione, as the extinction of fires, couking of food, heating Holopathy, (hot-of 'athether,) $n$. given to a sulstance puse of a substance lately recommended for the purpuse of renderigg fabrics water-proor, without interfermethod of preparing the come ar throagh them. The one of two pans, each of a cupcity of as follows: In place twenty ponnds of sulphate of alominganons, thin slicea; into the other pan eight ponnds of ole acid, and about a gallon and a half of alcoliol. Stir in order to properly mix them, and then pour gradnally, the contents of the second pan into the firnt, stimius, Whe tine with a wooden pallet for atont 20 minntes, Whan the mixtare is complete, nllow it to settle for alvout 24 honrs. The alcobol and the olcic acid, which is placed in a felt fite porred off, and the precipitate presenre in erder ther, and smunitted to a strung removed and dried in a molda cake. This cake is aterwards reduced to powder This pot stove. and pared for use for woollum falrics by powder is presolving one penod in atout 20 gallous of $u$ and die silk, lineb, aod other fablics one aud a faer. For the powder will be required for every 20 gallons of water.
Hydromechanies. A term adopted by several paera scientista to desigoate that branch of natural philosophy which is treated in this werk under the
 by Hiller to the element II, which, by him and given other chemists, is considered as the metal of tha hydrogen gas. Aecording to Dumar, the hydrogen gas re quires, for its condensation into a liquid metal, a tem perature far below aoy eold we have thus far lieen abl to produce ; and then, for the solidification into the ordinary metallic state, a further degrea of eold, peris below the melting-point of point of mercury as this eome to an melting-joint of potassiums. It order to come to an approximate estimate of such a low teru contracts like other gases, for every degree $-\frac{1}{90}$ of the increases as mut posseases at 3.0 Fahr.; and, 11/versely surmised by many physicisto by heating. It has been well and Clausins-that as heat thus uncrenses the elas ticity of grases, it is the absolute eanse of that elasticity or, in other words, that the canse of that elasticity is the molecular motion, which we call heat, associated with the molecnles of the gas; and which, by thair inerease, canse more powerinl mupact on one another and on the Walls of the vessels eontaiuiag them, and so inereaso the pressure. Tharefore, the absolute zero of teuperature would be the absolute zero of gaseons teusion, have may elastic force, would exert gits wuald eease to no molecular motion whatsoever It pressare, or have to be gas, us stam couses to a fonld then cease ficient amount of hatent heat is elimionted a suf Falr. added increases the elasticity of hydrogets by $4 \frac{1}{90}$ of its volume, and each degree withdrawa dimin. ishes the volume by $\frac{1}{90}$, it is evident that, if thie holds at all temperatures, there is no further reduction possihe at 400 below 320 , ayd hence no more heat eonld be extracted; therafore, the volume of the gas wonld
cease to exist. Hence if we uirludraw lrat until me cease to exist. Hence, if we hithdraw heat until ne
reach $-158^{\circ}$ Fabr., weshould arrivent the alisolnte zere at which all hydrugen nould become lifeless aud inert, and incapable of respondiug to or ussimiluting with any, form of motion, whieh, under other cirulustaluce would influence its molecules. Other gases would prob ably liquety or solidify lu-fure that puint was reached. but hydrogen, being cvidently the most volatile of ull, wonld in the last ta luse its kaseons condition, and he compelled to liquety or solldity; it would then he chemically as incrt as two pjeect of staid metal, which are mutanlly inert in regnrl to one another. In short, hemeally sjnaking, hydrogen wonld lave the prop-
 win there conlal he wo ane for its liphitior evapura hon, there coult he no canse for its lipnidity of gnserm that of a solid. Thie beury no other condition than When hydrogen was reduced to the liquid etate by Cmillete and bictet. Sue IIrbrogen.

dialogue between (God nud the prophet, the Inttor lin gins by dephoring the thesolate conthtion of Jorusalem (i. 1-4). did then forctells the destruction of the Itew ish statu by the Chaldeans (5-11). The praphet rephires by expressing it hope that they may not be eutirelly do-
etroyed, aul that the Chaldeand may bo punishod if in ktroyed, atul that the Chaldeans may be punishod i. 12-
ii. 1). God ussures the prophet thit the captivity wit ii. 1). God ussures the prophet that the captivity will
only be fora time, and that thacir captors will c-ventually only be fors time, abd that their captors will eventually be puasheml for their iniguties (it. 2-20). The second part isn prayer or psatm, in which the prophet recounts times past, and buseches him to he mercifnl to them in their captivity (iii.). The style of this prophet has al ways been much sdmirest; Eichhorn, De Wette, and Rosenmallor aro loud in their prasee of it, the firnt giviug a tietailed and animated manlysis of the construction of his prophecies. Ilis figures aro all great, happily chosen, and properly drawn out. His demnaciations are terrible, his derision bitter, his consolation cheering while with ait the boldaess and fervor of his ituagita famous psalm, or ode in the third and concluding cha ter, stande nosurpued in the whule comprass chnp brew poetry, for the Loldness aud rugidity wf its fiesta the sutilimity snd srawp of its conceptione the magniticence of its imagery, the music and melody of itarhy thm "He coutends," says Eichhora, "with worils, be otruggles with images; and who ie not seized with in sacred shudder as he reads, hike that of the prophet himself, ae he betheld the sublime sad terrible appearance of the ludescribatie." The canonical nuthority of this bouk has uever been calbed it question; sud it is eoverui
Hrs'bandry, Patrons of ) or Granoers. Uuder thas denomination there originated in 1866, a coipperaUnited Station of agriculturists, organized is the their social and the protection and develoyment of political or sectarias propayandism whatever. Primarily, this assuciatiun was called into exastence through
porting Gen. Scot in Joj2. The same year be married Lacy Ware Webb, of Cincinnati, daughter of Dr. Jame Webb, formerly of Lexiagtoa, Ky. He smpported Fremont in 1836 , And alse Mr. Lincold. His first public office was a Solicitur of Ciaciunati. H. was 39 when the wir brok inf. He cune, 61 . be colonel of the regiment was W. S. Resecrans. July 25 the regiment regiment was W. S. Rosecrans. July 25 the regiment
was sent to West Virgima. Rosecrans was promoted to general. $H$. was at the buttle of South Mromotain, where he was severely wounded, and for his gallaut participation in the battles arouud Wiachester, he was recommended for brigadier-general by Generals Sheri dan and Crook. It was during thia campaige that he was elected to Cougrese from the Secoud Ohio District Oct., ls64. He was thrice elected govertuor of Ohio The political campaign of 1875 in Ohio was an exciting one. The question of tha division of the school fund and the currency being prominent, $H$. was fonnd an fund. During the five years of his gubernatorial term frod. During the five years of his gubernatorial term, State delt 82,733 , 406 , and the tax from 3.5 to 2.9 mills ou the dollar, an anuual saving of vear $\$ 1,000,000$. Ile was nominated for President at the Repntlican Con-
the representation of Mr. O. H. K.lly, comminaloued by the bepartment of Agriculture to journey throngh the Suthern states of the V'inon for surveyling and reporting ufeo their syricultural und induntrad reestabliohing their condithon Thit inquest resuited in thronghout the fart of great diwatisfaction pris andig *edicuce of the high froights und vexatoun regulations adopted ty railway companies in the tran poptation of agricaltural and minernt prosince, and of the "xceskive prices charged for nericultural implemonts and domenwhate of things. Mr. K.lly in roncurt with Mr Suniders of the Dupsiment of Akriculture culcolved the iden of placing arricultural moternote on a coüperative lawis after the manger of an mosociated body, such as the Order of Odd-Fellows, for instance. A constitntion wus drawn up arcordingly, for the "Patrons of Humbandry" - tha name atoptel for the urder, its brunchea being styled kranzes:" that is to say. farme with all etablea and out-builitings,-and that conatitution provided for a mational and state and sathordinate granges. The officers of a grawige, whether mathonsl, state, or aubordinate, are electell ly the memhera, and comprise a manter, overneer, le tarer, steward, mosistant steward, motin, flora, and lady atvintant stewhrd. Fenules, poadmitted to membernhp on the same torms and with equal privilagee an men, but only thus. of the nex who are interested in agricaltural matters are cligible. Hegnlar mectiugs of the national and state grangea nre hed smmally; the silhordinate granges usually meeting moathy and frequently ofteuer. In Dec, 1867, the national grauke whe estatinhed at Wislington, and be 1874 nitmtrer of granger miltiplien no rapaly that, by 1 on of the in $1 s 72,1,160$. in in 1811,125 granges were orgnoized: 1 $\times 74$ this total had incrensed to 10015 with 14 ment of ship of 750,125 -eximated at duutle that number in 1875.
vention at Cincinnati, June, 1876, in opposition to Somnel J. Tilden, of New York. The popular vute at the electiou was: Hayes, + ,033.295; Tidacu, $4,281,260$; Corpper, 81,137 ; stmith (Prohibitiot), 9,522 : total vute polled,
$8,+11,136$, which embraces bome seattering votes wot named herein, including 539 votes polled ot an anti secret society ticket, is the Electoral Cullege thi vote stood: Mayes and Wheeler, 185 ; Tilden and 11 eтs doral Commission, p, 924. Seat March, 18i7. Seu Elec D. Howelle (ISi6), nud Ohio in the lion. by Whitelaw Reid.
Monelis. Williay D., a popular writer, ${ }^{8}$ in Ohio, co-editor 1 . Brought up ns a printer, in 1858 became co-editor of The Ohio State Journat; in 1800 iselued, in entitled, Porms of Two Friends Wrote, also, lives of Ahriham Lincola and IIamlit. In 1861 he was ap pointed U. 8 Coneul it Yenice, which he beld unti lowed by thation Life appered ahont this time, folSuburban Sketelies (1871), Their Weddiny Journey (1879), A Chance Aervaintance (1873), \&c. In 1871 he assmmed the editorship of the Atlantic Monthly, a pesition he filled for ahout ten yeara.
